The Association opposed bills to include nursery schools and junior colleges in our public school system and to provide state aid for these schools. It was the position of the Association that until the state is able to guarantee a reasonable standard for the present grade and high schools, it would seem unwise to assume an additional burden.

LIVESTOCK DISEASE CONTROL

Under legislation enacted in 1945, all breeding or dairy cattle more than eight months of age sold in the state must come from abortion-free accredited herds or be tested for Bangs within thirty days prior to the date of sale effective July 1, 1947. Legislation was passed extending the period for this test from 30 days to 60 days.

Under the amended law it is sufficient if the cattle have been tested within sixty days prior to the date of sale except that cattle sold through community sales must have been tested within thirty days prior to sale.

Also the provision which permitted calves vaccinated against Bangs disease to move freely even though they reacted to the Bangs test until they reach the age of 20 months was changed to permit these calves to move freely even though they react to the test up to the age of 30 months. Research has demonstrated that many of the vaccinated calves will become negative between the ages of 20 and 30 months.

To serve the livestock industry in making blood tests, the Department of Agriculture was given authority to set up not to exceed five additional laboratories at convenient points in the state. These laboratories are to be in charge of a qualified veterinarian and in addition to making blood tests for Bangs disease may make field diagnosis of animals.

WEED CONTROL

In response to requests from a number of counties, legislation was enacted which provides that upon petition to the county board in a county, the county board may create a county weed control department. This county weed control department will be under the direction of a county weed control commissioner. The county weed control commissioner will supersede and replace the township and city weed commissioners. The county department may acquire spraying equipment and other equipment for the control and eradication of weeds and this equipment may be used upon private lands upon the payment of a scheduled fee.

Other legislation for weed control permits the Department of Agriculture to enter upon premises where Leafy Spurge or Hoary Cress are found and to take whatever measures are necessary to eradicate these weeds, prohibits the sale of seed which contains the seed of any of the primary noxious weeds and limits the amount of weed seed in commercial feeding stuffs to 3% by weight and requires these weed seeds in feeds to be treated and rendered incapable of germination.

Illinois' four delegates to the National 4-H Club camp in Washington, D. C., are shown in Chicago as they boarded a plane for the nation's capital. Left to right: Orvan Peters, Kankakee county; Irene Downey, Putnam; Miriam Wrigley, Peoria; and Loren Nelson, Marshall.

VETERINARY MEDICAL COLLEGE

The Association supported a bill making an appropriation to the University of Illinois for a veterinary medical college building. An appropriation for this purpose was made in 1945 but the building was not constructed. Approximately 200 students are taking pre-veterinary medical courses and the building is urgently needed. However, the University of Illinois did not include this building among its first priority group. The bill making the appropriation for the veterinary medical college was caught in the legislative "jam" at the end of the session and was not called for passage.

HOME ECONOMICS BUILDING

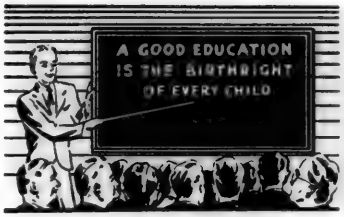
The Association joined with the Illinois Home Bureau Federation in sponsoring a bill making an appropriation to the University of Illinois for a home economics building. This bill also was caught in the "jam" at the end of the session and was not called for passage.

HOSPITAL AUTHORITY BILL

Legislation was enacted which permits the organization of a hospital authority district upon referendum in any area which may desire to set up such a district. The Association secured an amendment to this bill which provides for a separate vote in the rural territory involved if 10% of the voters in the rural area sign a petition requesting a separate vote. If a separate vote is had then the proposal must carry both in the rural area and in the urban area in order for the district to be created.

Other legislation enables the State of Illinois and localities within the State to qualify for assistance under the Federal Hospital Survey and Construction Act, authorized the Department of Public Health to prescribe minimum standards for hospitals qualifying for this Federal assistance and appropriates state funds for matching the Federal funds.

Even though the appropriation for farm-to-highway roads was reduced by $5,000,000 and the appropriations for the veterinary medical college building and the home economics building, both outside the Governor's budget, failed to survive in the final crowded days of the session and other minor bills in which the Association was interested failed to pass, nevertheless it is thought that the Association was reasonably successful in its efforts before the 65th General Assembly.



By JOHN COX
IAA Director of Rural School Relations

Brown county was the first to vote under the new Community Unit bill recently passed by the General Assembly and was thereby the first to establish a county 12-grade district in Illinois. They voted on Thursday, July 31, by a vote of 873 to 54 to bring all of the grade schools and high schools under a single school administration and one county wide tax rate. Of the votes in favor of the new county school district, 424 came from rural areas and 449 from urban areas.

Not long ago Brown county had voted for a county wide grade school district by a vote of 938 to 258. This county, with approximately eight full townships, voted to bring the high schools into the same district with the grade school in order to profit from the financial as well as superior educational advantages of the 12 grade or unit district system.

Following close after Brown county, Scott county voted approximately 3 to 1 to establish a 12-grade county district on Aug. 2. These two counties are among the smallest in the state and can very well function as a county school district.

Above is the new Franklin County Farm Bureau home at Benton recently acquired at a cost of about $20,000. The building is 50 feet x 100 feet and is a former hotel.

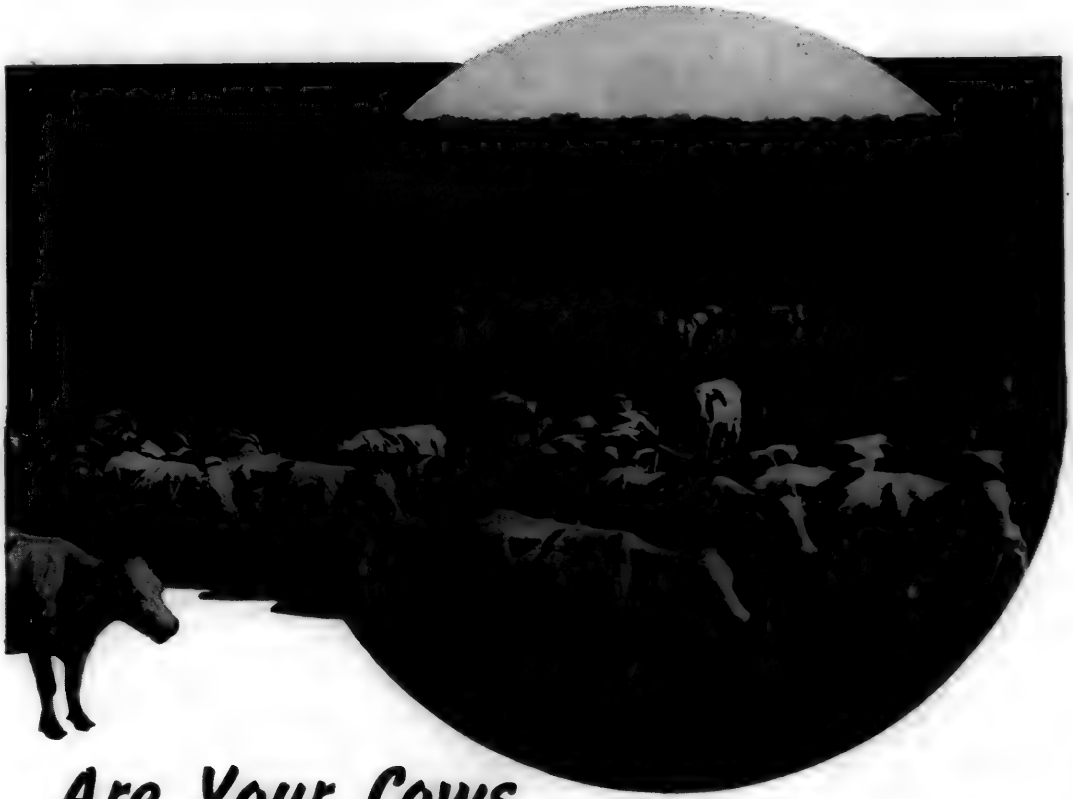
Success of any school district depends upon the wisdom and foresight of the people chosen to administer it. However, these two counties have laid the foundation for improved educational efficiency and perhaps some economy in their school system.

They also will receive a considerably larger share of equalization state aid because of the lower qualifying tax rate of the unit district.

No more than three representatives on the school board can come from any one township, according to the new community unit law; however, the Scott county survey committee recommended that a board member be elected from each of their seven townships. It is thought that the public's acceptance of the proposal will constitute a gentlemen's agreement to be followed in selecting school board members in the future.

County superintendents report numerous other petitions for votes under the community unit law to set up 12-grade districts. Many of these votes will be for territory less than a county, particularly in the larger counties. Greater economy is possible in a county district even in the larger counties.

However, many people think that the possible economy would not offset the loss in local control. The IAA recommends a minimum high school enrollment of 150 pupils and most other organizations recommend a minimum of 300 high school pupils. Therefore, it would not be considered wise by most educational leaders to contemplate setting up a unit or 12 grade district with fewer than 150 to 300 high school pupils. The high school enrollment is approximately 18 per cent of the total enrollment.



Are Your Cows FACING POOR PASTURE?

This is the time when pastures are a problem! They do not provide sufficient proteins, minerals and vitamins to keep dairy herds producing properly.

Cows need extra feed to replace these deficiencies. If you suffer a loss of production at this time, it cannot be regained later!

Blue Seal Dairy Balancer contains the necessary nutrients to keep your herd producing at maximum efficiency in spite of poor pastures.

Remember—A good rate of milk production can overcome high feeding costs!

BLUE SEAL

ILLINOIS FARM SERVICE SUPPLY COMPANY

DIRECT-TO-THE-FARM SERVICE

Blue Seal feeds are delivered to the farm at regular intervals on a route system. Farmers like this because they know when to look for the Blue Seal Feed truck and can make their plans accordingly.

NEWS and VIEWS

Hold Annual Home Bureau Organization Conference

By Mrs. EDWARD A. SCHILF
Home Bureau Publicity Chairman

THE Tenth Annual Citizenship and Home Bureau Organization Conference sponsored by the Illinois Home Bureau Federation and the Home Economics Extension Service at MacMurray College, Jacksonville, July 8-11, was an outstanding success. The program was excellent with speakers excelling in their respective fields to present the material . . . and, the weather was perfect!

One of the outstanding features of the conference was the active discussion by the delegates of the material presented by the speakers. Delegates from 80 counties were represented. One hundred fifty-three delegates were registered for the entire conference. Fifty more attended part of the conference.

Economics of Germany

Dr. Carl F. Taeusch, St. Louis University, St. Louis, Mo., discussed "The Government of Occupied Germany," and "The Economics of Occupied Germany." Dr. Taeusch's third talk, "Our Responsibility for Foreign Policy," was in the form of a panel discussion. The delegates who served on the panel were Miss Zella Corbett, Carroll county; Mrs. Albert Pierce, Moultrie; Mrs. Virgil Simpson, Rock Island; Mrs. B. R. Ryall, DuPage; and Mrs. Mildred Douglas, Pulaski-Alexander.

Dr. Nellie L. Perkins, professor of home economics, University of Illinois, presented two talks: "How to Choose and Set Up Play Equipment for Small Groups" and "The Psychological Characteristics of Childhood and How to Meet Them." Dr. Katharine Taylor, specialist in family education, University YMCA, Champaign, spoke on "Being Fit to Live With" and "The Role of the Homemaker in the Home and the Community."

Gain of 5,821 Members

Dr. C. L. Stewart, professor of agricultural economics, University of Illinois, discussed "The Land as a Stabilizing Factor."

Besides these talks the delegates discussed their own problems in their organization. Mrs. Dale Huffman, Mason, co-chairman, organization committee, Illinois Home Bureau Federation, gave the report of membership for 1946-47 and discussed future plans. The state organization showed a net gain of 5,821 members bringing the total membership up to 40,472 members. Forty counties made the quotas that they had set for the year with Pike county leading with a quota of 20 and gaining 191 new members. However, Cass county led in the highest in percentage of gain of new members with a gain of 83.33 percent. Cass was second on the honor roll with a total of 155 new members.

Miss Florence Johnson, Madison county, presented the delegates with copies of the Federation Handbook — two copies in each county. Miss Will Parks, Rock Island county was chairman of the committee, with the following as members of her committee. Miss Mary Louise Chase, assistant state leader, University of Illinois; Miss Johnson, and Mrs. C. W. Cutler, former vice-president of Cook county but who is now living in Washington state.

Fearful of possible undulant fever attacks Hermine and Robert Scheffner of near Freeport are happy with their new milk pasteurizer.

Discuss Responsibilities

"Responsibilities of Executive Boards for Long-Time Plans" were discussed by a panel with Mrs. Paul Henry, Christian county, as leader. Members of the panel were Mrs. Eldon Branch, Marion county; Mrs. M. C. Ackland, Morgan; Mrs. Myrl Dehart, Pike; and Mrs. Harold Bower, Kendall.

Mrs. Will Parks, Rock Island county, and Mrs. Stanly Castle, Madison county, discussed the school situation. Miss Mary Louise Chase, Miss Lulu Black, and Mrs. Mary Ligon, members of the extension staff at the University of Illinois, discussed "Developing Subject-Matter Programs to Meet County Needs."

Miss Myra Jane Robinson, Edgar county, summarized the conference in her talk: "Translating the Conference into Action."

Mrs. June Clifton, Iroquois county, who had been very active in legislative work concerning House Bill 408 which was to have appropriated a sum of money for the new building, thanked the Illinois Agricultural Association for the assistance it gave the Federation in their legislative work.

Enjoy Conference Chorus

An important part of the conference was the recreation planned by the state chairman, Mrs. Emile Rediger, McLean county. Each session was opened with group singing with Mrs. R. E. Milligan, Champaign county, state music chairman as leader with Mrs. R. A. Shively, Piatt county, accompanist.

One feature of the conference enjoyed by all, those who listened and those who took part, was the conference chorus composed of members of the conference with Mrs. Milligan as director.

FILLS VACANCY

Mrs. Harold P. Joy, Morgan county, was named by the executive board of the Illinois Home Bureau Federation, to fill the vacancy of the directorship of the West Central district cause by the death of Mrs. Harry C. Smith of Pike county.

for HOMEMAKERS

WOULD YOU STILL MARRY A FARMER?

THE Chicago Tribune recently asked some city gals if they would like to marry a farmer. Below you will find their answers. You women who decided long ago to marry a farmer, if you again had the choice, would you still marry a farmer?

Willette Ubl, Berwyn—It would all depend upon the type of farmer he is. I'm afraid I wouldn't make a very good helper on a farm, because milking cows, cleaning separators, cooking for a threshing crew and all that sort of work doesn't appeal to me. I wouldn't mind marrying a gentleman farmer, though.

Eileen McGreevy, Oak Park—I could never marry a farmer because I just love the city! I'd be too lonesome in the country. It's so isolated. I like to go to the country for several days in the summer, but then I get enough of it to last me for a long while. I'm always more than ready to get back to the city.

Mildred Campbell, Geneva—I personally don't think I'd like to marry a farmer unless I could have all of the convenience in my home that living in the city offers. I'd also want some hired help if I were to be a farmer's wife. Otherwise the city is for me—where I work certain hours and have the rest of the time free.

Nancy Zipoy, Highland Park—Yes, I'd marry a farmer—the ranch type farmer. I wouldn't want to marry a farmer who has to work all day in the fields and never gets time to enjoy his home or his family, but I'd like being married to someone who had a ranch—either a dude ranch or working ranch.

Gloria Mayfield, Woodlawn—If the farm were very large and very modern, with all modern conveniences I'd like to marry a farmer. I like the space and fresh air and cleanliness that a farm offers. But if the farm were just an ordinary farm where I'd have to struggle to keep up with the work, I'd rather marry a city man.

COLLAR AND CUFF

Large collars are part of the fall fashion picture. This circle of crisp waffle pique may be the fillup your last season's dress needs. They're easy to make. For free instructions send a self-addressed stamped envelope to Women's Editor, The Illinois Agricultural Association, 43 East Ohio, Chicago 11, Ill.

WELL-DRESSED BABY

Here's what the well-dressed baby will wear this fall — a knitted cap and sweater set and a coverlet of soft crocheted wool. The sweater is in cardigan style. For free instructions send a self-addressed stamped envelope to Women's Editor, The Illinois Agricultural Association, 43 East Ohio, Chicago 11.

KANE COUNTY HAS FLOWER SHOW

The Kane County Home Bureau sponsored a flower show in June at the St. Charles Community High School with approximately 800 in attendance in the afternoon reports Mrs. Elmer Flanders, Kane county publicity chairman.

The special feature of the afternoon was the demonstration of many attractive flower arrangements given by Mrs. Anita H. Schoomaker of Genoa. Mrs. Myrtle G. Gyler arranged the bouquets and made the lovely corsages which were modeled by various members of the Home Bureau units.

MRS. HARRY SMITH HOME BUREAU DIRECTOR DIES

Mrs. Harry C. Smith, Griggsville, district director of the west central district of the Illinois Home Bureau Federation, died June 26, 1947, at the Passavant hospital, Jacksonville, following an illness of several months.

Mrs. Smith was an active member of Home Bureau in which she has served as chairman of both her local and county units.

She leaves her husband, Harry Smith, a daughter, Mrs. J. R. Vose of Chambersburg; a son, Ray, in the navy; her mother, Mrs. Grace Coover, and a sister, Mrs. Allen Dunn, both of Rock Island.

Mrs. Smith was born in Madison, Wis., Dec. 20, 1894. She attended Illinois College, and the University of Illinois. Following her graduation she taught in both the Pittsfield and the Perry schools.

She was a member of the Presbyterian church of Perry, and the Order of Eastern Star. At the time of her death she was Past Worthy Matron and secretary of the Order.

SEE "SHOWBOAT"

Members of the Christian County Home Bureau planned to see "Show Boat" in St. Louis the last of August. Christian county recently sent 110 members on a tour of Arthur, which included the Rockome Gardens, the Progress Manufacturing Company, and the Amish settlement.

YOU SAVE MONEY, TIME AND EFFORT!

ORDER MOTOR OIL NOW!

BLUE SEAL GREASE GUNS
Handy and efficient. Include one with your order.

OIL FILTER CARTRIDGES
This new can-type replacement cartridge is well made and very efficient. Order a supply.

EDISON SPARK PLUGS
These plugs with the "spun-on" leakproof gasket give excellent service.

Farmers all over Illinois are taking advantage of the Future Order Plan that your Blue Seal Truck-salesman has for you.
Decide *now* how much oil and grease you will need for next year's farm work. *Save money* by placing the order now. Delivery will be made before spring work starts. You'll save valuable time by having your oil there when you need it—and it's so easy to order it all now and not have to worry about it later.

ILLINI PREMIUM MOTOR OIL

Illini Premium Motor Oil is our most popular oil. It makes up 60% of our total Motor Oil Sales to farmers.
Illini is a new motor oil with 5 outstanding features of superiority; (1) keeps a clean motor clean longer; (2) provides a better piston-seal; (3) non-corrosive to bearing metals; (4) holds resinous varnish formation to minimum; (5) assured longer life for piston rings and cylinder walls.

We Believe in SIGNS

Every Month is *fire prevention* month, and a good way to mark this important period is to put up some *signs* around your buildings — "AVOID FIRES", "NO SMOKING", "CAREFUL — GASOLINE". You can do a lot to reduce the losses and risks of farming by using signs as industrial plants use them — to remind you and your helpers often and boldly to "BE CAREFUL"!

Your signs need not be fancy, but make 'em *big* and *bold* and put them everywhere. Don't be one of the many farmers who will sustain fire losses this year. A good *SIGN* is a *sure* SIGN of *caution*. And to this "ounce of prevention", add the security of a low cost Country Fire insurance policy. It's another sign of a wise farmer. See your Country Fire agent today for details.

BALLAST OR A MILLSTONE

By President Charles B. Shuman

DO YOU remember the old time balloon ascension that was the high spot of the State Fair? It was a dramatic event, executed with much business of preparation and checking of equipment. Finally, the large gas bag was inflated and the daredevil was off with a roar of applause. I always wondered why a balloon that was intended to soar upward should carry such a burden of heavy sandbags fastened to the sides of the basket.

Price cycles are like balloon ascensions. Both need ballast to help regulate their rise and descent. Both could crash disastrously if excess ballast were not discarded as the inflationary gas was allowed to escape.

Our present inflated price level is like a high soaring balloon. It has risen fast and high because war conditions prevented the operation of the many checks and balances that ordinarily act as ballast. During recent months several "sandbags" could have been added to check the rise.

Government controls and laws encouraging restricted production in business and labor could have been removed more quickly so as to encourage increased output. Drastic cuts in federal spending would have helped check the inflationary trend.

Today, with newspaper headlines screaming about the high cost of food and government agencies issuing statements telling about farmers' "extremely high incomes," agriculture is in a vulnerable position. The truth is that farm prices are little if any higher than other prices.

In fact, due to increasing costs of supplies and labor, the parity price ratio for all farm prices has turned downward and is now at 117 as compared to the high point of 132 in October of 1946. It is high time that farmers examine some of the ballast that could be thrown overboard to ease the decline when it comes. If we are not alert, some of the sandbags attached during recent years may become millstones around our necks, dragging us down to a crash similar to the disaster of 1929-33.

One of these millstones has been the increasing cost of distribution. During war periods, the margin between the farm price and the price that the consumer pays has tended to widen materially. These margins, including commission, processing, distribution and retail costs, have not been reduced when farm prices collapsed.

In 1914 the cost of distributing all farm products was 4.5 billion dollars. In 1920 it was 10 billion. During the depression years, consumers cut their spending for farm products materially, but the cost of distribution only dropped 10 per cent. We are now at an all-time high point with a cost of distribution of farm products in excess of 12 billion dollars.

If history repeats itself and the price cycle balloon begins its descent, this 12 billion margin, unless materially reduced, might prove to be excess ballast and cause another disastrous crash.

Farmers now demand that the distribution industries use every means to make these margins between producer and consumer more flexible. Changes in consumer demand must be reflected more rapidly and more accurately to the producers. If the industry itself does not take effective action, farmers will be forced to greatly expand their cooperatives so that unnecessary ballast will be discarded.

Crowd at field day in Will county watches how quickly weeds are sprayed by using large tank truck and power sprayer. Chemical used was new weed killer, 2-4D, particularly effective against Canadian thistles.

add ACRES *to* YOUR FARM

By LEW REISNER
IAA RECORD Field Editor

A. C. GUETHER took a lot of good natured ribbing when 1200 farmers from 10 near-by counties gathered on his 160 acre Will county farm during one of the regional pasture improvement field days held throughout the state recently.

Along about noon when the demonstration was about half completed Geuther's blue grass pasture began to look pretty sick. Five tractor outfits, pulling an assortment of tillage tools, had torn the field to shreds.

One onlooker who had been viewing the spectacle with a critical eye, addressed the crowd at random. "My hawgs," he said cryptically, "do about as good a job of rooting up my pasture every spring."

And that's how the pasture looked during the first part of the field day — pretty well rooted up. But the farm advisers, particularly Wayne Churchill of Will county, the soil conservation technicians, and the experts from the University of Illinois, all of whom helped sponsor the event, didn't seem much worried.

These were the men who had to answer to Geuther for the sad plight of his pasture, but they were sure of success. They were experienced in the science of making two blades of grass grow where only one weed grew before.

The sod was torn up, they explained, to provide a seed bed for the grasses. It also holds back the blue grass enough to give the legumes a chance to grow when they're planted next spring.

Their formula for giving old pastures new life which they put to test on a large scale on the Geuther farm falls logically into five major steps.

1. Test and treat the soil. Don't guess, they said, but test and put on the fertilizer the soil needs.

2. Tear up the old sod. Prepare a good seed bed and mix in needed minerals with the soil to give the new seeding a chance.

3. Reseed. Use a good mixture, seeding brome and timothy in the fall and legumes in the spring.

4. Control grazing. Make sure the new seeding gets established, especially the first year. Electric fences make good barriers for cattle.

5. Clip weeds. Follow good management after the seeding is reestablished. Don't let weeds rob new seeding of plant food.

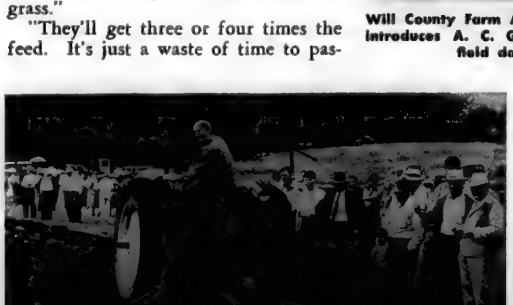
Cherell Overson, who manages a 1200 acre farm near Crete, said he'd had experience with renovated pastures in Wisconsin before he came to Illinois.

"Pastures treated like they're treating them here today will yield as well as the best hay field," he said. "The cows will be up to their bellies in grass."

"They'll get three or four times the feed. It's just a waste of time to pasture worn out blue grass."

Returning to the five steps in renovating old pasture ground, the soil on the Geuther pasture was tested at the Will county soil laboratory several weeks prior to the field day and was

Will County Farm Adviser Wayne Churchill introduces A. C. Geuther on whose farm field day was held.



This disk, with two moveable winged sections, was used to level off field and prepare good seed bed. Field previously had been torn up by field cultivator.

found lacking in lime and phosphate.

During the field day lime from a dump truck was spread on the field at a rate of three tons per acre. The tests showed that the pasture needed 1300 pounds of phosphate per acre, and this was also spread by truck.

The minerals were spread after the sod had been torn up by three different farm tools — the conventional mold board plow, a field cultivator, and a wheat land disk. Geuther expressed the opinion of most of the farmers when he said he favored the field cultivator, a sort of spring tooth harrow mounted on two wheels, to tear the sod.

"It gets down deep enough, three or four inches, and leaves a good mulch on top," he observed. It doesn't cause erosion like plowing does.

After the test field was torn up and fertilized the field was disked and dragged, and a seed bed prepared.

The pasture was seeded to four pounds of brome and four pounds of timothy. Next spring, probably before the frost is out of the ground, one pound of ladino, four of sweet clover and six of alfalfa will be broadcast on each acre.

W. O. Scott, of the agronomy department, explained the advantages of this mixture as follows: "Timothy is a fast starter and will make a growth next year. Brome takes a long time to develop but will come into its own after one or two years.

"Sweet clover is a good cheap pasture and persists a long time. In this kind of mixture it won't dominate the other plants, either.

"You know the advantage of alfalfa. It's a wonderful pasture, and stays green all summer long. Ladino is a new clover to this country, but furnishes a lot of high protein forage."

Farmers who follow these five steps, and seeding this mixture, will have excellent pasture from the field for at least six years, Scott said. The present cost of renovation will cost about $2.50 an acre per year, Scott estimated.

To many of the farmers attending the field day, this idea of pasture renovation was new. Many were adopting a wait and see attitude. They'll watch the progress the pasture makes next summer with real interest.

In the meantime the significance of the statement made at the meeting by M. L. Mosher, University farm management specialist, was not lost on them. "Remember," he said, "that when you double the amount of stock you can keep on 30 acres of pasture like this, you've added 30 acres to your farm."

This is an airview of downtown St. Louis where the Illinois Agricultural Association will hold its 33rd annual convention Nov. 17-20 at the Jefferson Hotel. In foreground is Memorial Plaza. In background is Mississippi river.

See You in St Louis NOV. 17

THE 33rd annual meeting of the Illinois Agricultural Association and associated companies will be held Nov. 17-20 at the Hotel Jefferson in St. Louis, Mo.

This is the first time in nearly seven years that the annual meeting of the IAA has been held outside Chicago. During the war years, the shortage of housing and the ban on unnecessary travel caused the IAA to confine its meetings to Chicago.

As has been the custom in other years, the associated companies will hold their annual meetings during the first two days of the meeting, Monday and Tuesday, Nov. 17 and 18.

This year a dinner will be held by the Association for the voting delegates, probably on Tuesday evening. Also on Tuesday evening a general entertainment program will be held for all members attending the convention.

Farm Bureau presidents and farm advisers will meet at 10 a.m. Nov. 17 for their annual session and luncheon and the Farm Bureau presidents will meet later in the afternoon for their annual conference.

The annual Talkfest sponsored by Rural Youth also will be held Tuesday at the Jefferson Hotel with 18 delegates participating in the state meeting.

The Illinois Agricultural Association will hold its meeting on Nov. 19-20 and the annual address of the IAA president will be given on Wednesday morning, Nov. 19.

Arrangements are being made to house the large influx of Farm Bureau members expecting to attend the convention, and while rooms are somewhat easier to get than during the war, those planning to attend are urged to secure reservations as soon as possible through their local Farm Bureaus.

The IAA board of directors took action last winter to hold the meeting in St. Louis. It was their belief that this would give farmers from the southern part of the state a better chance to attend.

Southern Illinois Farm Bureau families responded strongly to the invitation to attend the convention held in St. Louis in January, 1941.

That meeting was the 25th or Silver Anniversary of the founding of the IAA and brought out the largest convention crowd in the IAA's history.

Henry Johnson, cattle salesman for the Chicago Producers, tells of cattle feeding prospects during fall livestock outlook meeting at Ottawa. It was one of many held in counties throughout the state.

FARM PRICE OUTLOOK
Good for '48

By JIM THOMSON, IAA RECORD Asst. Editor

PRICES for most farm products are expected to be high for the rest of 1947 and probably through the 1947-48 feeding season. This was the opinion expressed at annual fall livestock outlook meetings throughout the state last month.

Conducting the meetings on the shape of things to come were county Farm Bureaus in cooperation with the University of Illinois extension service and fieldmen and salesmen from livestock producer agencies.

At the Ottawa meeting, La Salle county cattle and hog feeders were told that prices can be expected to remain high through 1948 because of high foreign demand, high domestic incomes and resulting high domestic demand, and because of the short feed crop this year.

It was forecast that supplies of feeding grains for the coming season will be tight if not critical. Prices of grains are expected to be high in relation to prices of livestock. This unfavorable price ratio of feed to livestock is expected to bring about much shorter supplies of meat in 1948 and probably high-level prices, it was predicted.

"This year," said Henry Johnson, cattle salesman for the Chicago Producers, "will be like the last few years in feeder buying. There is not an abundance of rough feed and I see no evidence of lower prices in the next few months. I would advise the livestock feeder not to vary much from his last year's program.

"Late winter and early spring," Johnson continued, "probably will bring the heaviest marketing and slightly lower prices but the upswing will come again next summer."

Prices for non-farm products are expected to remain high and may climb further, affecting farm production costs, it was explained at the outlook meeting.

Appealing to the cautious side of the average stock feeder, speakers pointed out that there also exists prospects for lower consumer demand as follows:

1. Exports may be lower. A marked reduction in exports of raw materials and industrial products would weaken business conditions and in turn lessen the demand for farm products.
2. Corporate businesses have spent more than their net savings during the past year in plant expansion and remodeling.
3. Buying by businesses to accumulate inventories is about over.
4. Although consumer incomes are rising they are not rising as fast as prices. Thus purchasing power is declining and probably will continue to do so in 1948.

L. H. Simerl, former head of the Illinois Agricultural Association department of research, and now marketing fieldman for the University of Illinois extension service, predicted that better grades of cattle will bring higher prices in 1948. He warned the feeders, however, that the time will come when the man with heavy livestock holdings on hand may be hurt by a sharp drop in prices.

Feeders, Simerl said, should keep a sharp eye on the future and unload at the best possible time. Poor times to hold livestock may be foreseen in danger signals which herald trouble ahead, he said.

Simerl listed the danger signals as:

1. Government restrictions on credit through its bank policy.
2. Slackening demand in the automobile industry.
3. Severe labor disturbances, i.e., major strikes.
4. General trend of prices downward.

Shuman, IAA; Wilfred Shaw, AFBF secretary; President Ralph Gillespie, Washington FB; President Warren Hawley, New York FB; President George Putman, New Hampshire FB; President Walter Hammond, Texas FB; President Edward A. O'Neal, AFBF; President H. L. Wingate, Georgia FB; and President Perry Green, Ohio FB. Between Gillespie and Hawley is President Hassil Schenck, Indiana FB.

Rock Island Drops Tax Against Milk Producers

PRESIDENT L. A. Schnekloth of the Quality Milk Association, Moline, announced last month the withdrawal by the Rock Island city council of an amendment to the Grade A milk ordinance which would provide an assessment of 2½ cents per hundredweight of milk delivered by each producer.

Following the enactment of the amendment, the Quality Milk Association, representing over 700 producers in the Quad city area, voiced its objections and asked the city council for a hearing to reconsider the matter. Over 400 producers attended the council meeting.

The objections of the Quality Milk Association were based on the grounds that the Grade A ordinance was enacted to protect the supply of milk for the consumers, and that the producers were in no way represented in the city council, the taxing body.

Following this hearing the matter was reconsidered, and the city council rescinded its previous action Aug. 25.

The Quality Milk Association pointed out that, although it objected strenuously to the assessment against producers, it supported the Grade A ordinance in principle as a progressive step toward improving the Rock Island milk supply.

PIDCOCK HEADS CO-OP LOCKER ASSOCIATION

J. L. PIDCOCK of the Indiana Farm Bureau Cooperative Association, Indianapolis, has been employed as manager of the Illinois Cooperative Locker Service.

The Illinois Cooperative Locker Service is an associated company of the Illinois Agricultural Association and has 100 member plants throughout the state.

Pidcock succeeds Cecil Musser who will become manager of the Illinois Farm Bureau Serum Association, another IAA associated company.

Pidcock has been in charge of the Indiana cooperative's locker service for the past two years. He was scheduled to start work in Illinois on Oct. 1.

He is a graduate of the University of Kentucky and served as a farm adviser in that state. He is 39, married and has two children.

SOYBEANS HOLD OIL

Contrary to a commonly held belief, no oil is lost from beans during their storage before processing, recent research by the U. S. Department of Agriculture has proven.

Front Cover

METAMORA, a small town about 20 miles northeast of Peoria in Woodford county, is the scene of the eighth of our series of cover pictures illustrating picturesque and historical Illinois scenes. Here stands the Metamora Court House, beautiful in the simplicity of the lines of its Greek architecture.

It was here in the 1840's that lawyers and judges of later renown in Illinois history gathered to try cases and discuss important issues of the day. Among them were Abraham Lincoln, Stephen A. Douglas, Robert Ingersoll, and Adlai Stevenson.

The courthouse, substantially the same today as when built in 1845, is a two-story brick and walnut timber structure of Greek Revival design; the bricks were burned in the village. Four fluted Doric columns support the pediment, and an octagonal cupola, encircled with an iron railing, overshadows the portico.

A hall, with offices on either side, runs the full length of the first floor. On the second floor is the old courthouse, restored as nearly as possible to its original condition, in which are pioneer relics of the Woodford County Historical Society. Just south of Metamora, in a locust grove, a marker designates a site where Lincoln spoke in 1858.

MR. FARM BUREAU MEMBER, HERE'S

YOUR GRAIN MARKETING

ILLINOIS Farm Bureau members have taken steps to follow their grain on its way to market all the way from the farm to the processors who prepare it for human consumption. Their state organization, the Illinois Agricultural Association, with the approval of county Farm Bureaus, particularly those in the cash grain producing area, has set up Illinois Grain Terminals Company to enter the grain merchandising business.

The new company will merchandise grain, that is, it will purchase grain at the terminal markets that has reached the terminal markets through county grain companies, county service companies that are engaged in the grain and feed business, local elevators which have memberships in Illinois Grain Corporation, another state-wide affiliate of the Illinois Agricultural Association, and the several river operating companies that have been organized in the past several years.

In order to merchandise grain at the terminal markets it will be necessary for the Illinois Grain Terminals Company to acquire facilities at the terminal markets, particularly, Chicago, East St. Louis and Peoria.

Terminal facilities are already available at Indianapolis and Evansville, Ind., Louisville, Ky., and Decatur, Ala. These facilities are owned and operated by Indiana Grain Cooperative, a cooperative organization sponsored by the Indiana Farm Bureau.

Indiana Grain Cooperative, Inc., has reciprocal membership agreements with the Illinois Grain Corporation and the savings realized by the merchandising operations of the Indiana concern flow back to Illinois grain producers through Illinois Grain Corporation and the county-wide local Farm Bureau companies at the county level.

The merchandising operations of the new Illinois Grain Terminals Company will follow closely those of the Indiana neighbor. These operations include purchasing, storing, conditioning and reselling the grain after it reaches the terminal market.

The farmer with surplus grain to sell hauls his grain to his nearest facility owned by and operated by a local or county-wide company sponsored by the local Farm Bureau.

The grain is then sold through Illinois Grain Corporation, a commission and brokerage agency, operating on the principal terminal markets at Chicago, St. Louis and Peoria. It also has branch offices at Mendota, Bloomington, Champaign and Jacksonville.

Illinois Grain Corporation will sell this grain to Illinois Grain Terminals Company. Illinois Grain Corporation, however, will not be able to sell all of the grain that is offered to it to Illinois Grain Terminals Company but will find other markets for grain offered it. Only the grain that is sold to Illinois Grain Terminals Company or the Indiana Farm Bureau Cooperative will remain in cooperative channels.

In the merchandising process there are net savings on all of the operations that take place in the handling of the product. Through Illinois Grain Terminals Company these net savings will accrue to the benefit of the producers and it is from these net savings that patronage refunds will be made available to the producer.

Patronage refunds will be paid back to Illinois Grain Corporation where they will be added to the net savings that will accrue from the commission and brokerage business and from the net savings that have been realized from Indiana Grain Cooperative. The combined net savings, therefore, will be paid back through the county or local grain companies and they, in turn, will pay them to the producers based on the volume of business handled.

Illinois Grain Terminals Company will have as its members Illinois Grain Corporation, the several river grain companies operating on the Illinois and Mississippi rivers, county grain companies that have been organized by county Farm Bureaus, county service companies that are engaged in the grain and feed business and the Farm Bureau-type elevator companies of local elevator companies that reorganized and function on the same basis as the county grain companies and the county service companies.

In these local elevator companies, patronage refunds will be limited to Farm Bureau members and to non-Farm Bureau members who are common stockholders at the time the local company reorganized.

The state-wide grain marketing pattern as adopted by the county Farm Bureaus, the Illinois Agricultural Association, Illinois Grain Terminals Company and Illinois Grain Corporation, is already shaping up and looking forward to a state-wide coverage of cooperative grain marketing services under Farm Bureau sponsorship.

The program will be complete when any Farm Bureau member in the state who has surplus grain or soybeans for sale lives close enough to a facility owned and operated by a Farm Bureau sponsored company so that he can market his grain or soybeans through that facility if he so desires. When the time comes when every Farm Bureau member in the state lives close enough to such a facility, the grain marketing problem becomes one of efficient service.

County-wide grain companies have been organized by the county Farm Bureaus in the following counties: Lee, Bureau, Grundy, Livingston, Ford, Peoria, Tazewell, Mason, Henderson, Warren, Hancock, McDonough, Macoupin, Champaign, and Moultrie.

Other county Farm Bureaus are already seeing the need for reorganization of county-wide companies.

County-wide grain companies that now own facilities are as follows: Lee, Grundy, Livingston, Mason, Hancock,

PLAN

By G. H. IFTNER
Acting Manager Illinois Grain Terminals Company

McDonough, Macoupin, Champaign, and Moultrie.

County service companies own and operate grain marketing facilities in the following counties: Henry, Stark, Knox, Montgomery, Bond, and Franklin.

In four counties, Coles, Schuyler, Monroe, and Jersey, the local elevator companies have already reorganized and become Farm Bureau sponsored organizations. All of them operate one or more grain marketing facilities.

In La Salle and St. Clair counties local elevators have reorganized and become Farm Bureau sponsored organizations at Serena, New Athens, Lenzburg and Summerfield.

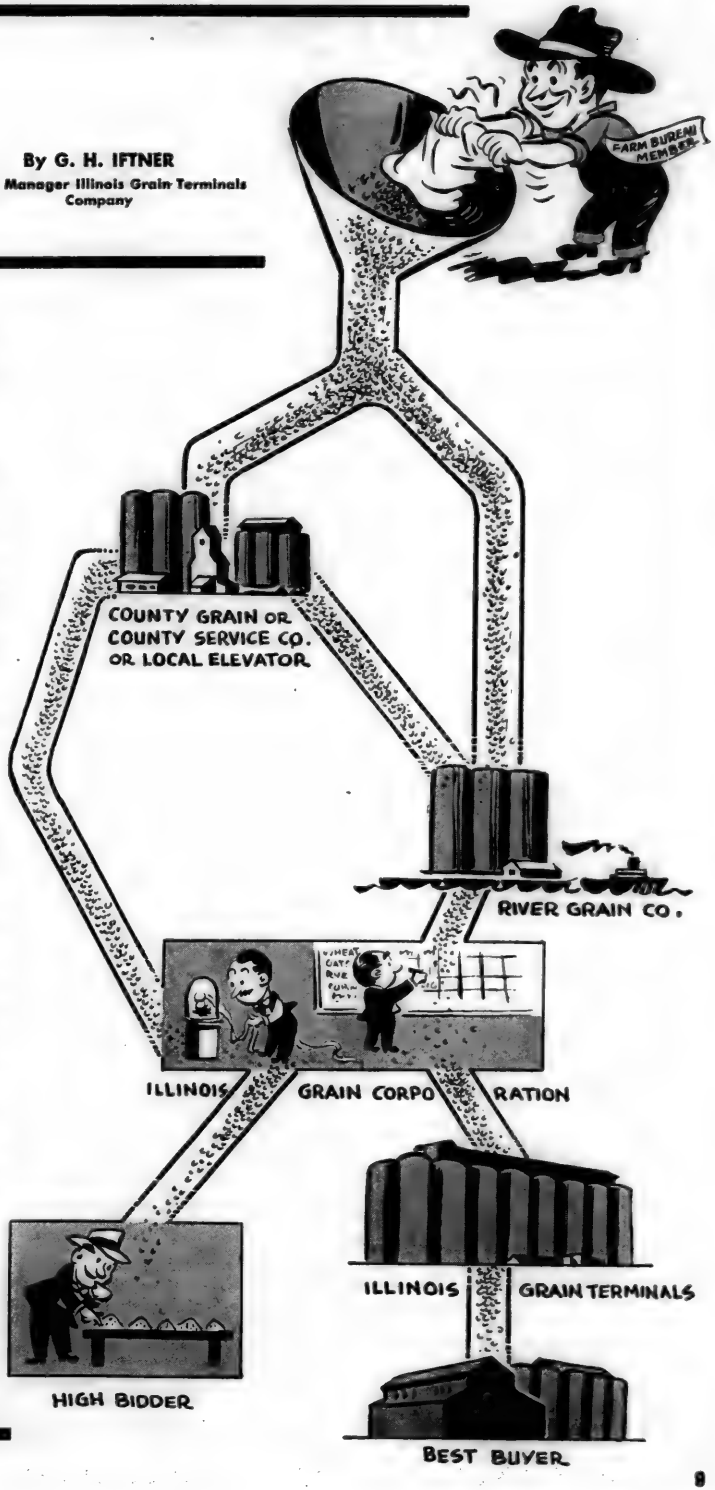
Regional operations have been organized on the Mississippi and Illinois rivers. Western Illinois Grain Company was organized two years ago and has been operating a river sub-terminal at Dallas City and, in addition, operates three inland elevators.

Other regional operations may be developed on the Mississippi at a later date.

The second river sub-terminal project to get underway was the Havana River Grain Company at Havana which serves an area comprising most of seven counties, namely, Mason, Fulton, McDonough, Schuyler, Cass, Menard and Logan counties. This company has been operating since July 1, 1946. It has constructed a new 70,000 bushel elevator and is remodeling the old 20,000 bushel elevator which it acquired from the Havana Farmers Elevator Company. A large corn crib with shelling equipment is nearing completion in connection with the project.

The Havana River Grain Company was organized in conjunction with a development at Decatur, Ala., a project of the Indiana Grain Cooperative. Much of the high grade corn marketed from Havana will move by barge down the Mississippi, up the Ohio and down the Tennessee rivers to Decatur, Ala.,

(*Continued on page 22*)



FARM BUREAU CO-OPS

ATTACKED

A VICIOUS attack upon the Illinois Agricultural Association and its affiliated organizations is contained in an anti-cooperative pamphlet now being circulated throughout the state.

The ridiculousness of the charges against the Association clearly indicates that the authors of the pamphlet are not only misguided but misinformed. The authors claim to represent Illinois business men.

Directors and officers of the association issuing the pamphlet which attacks the Farm Bureau are listed in a solicitation letter as follows: B. E. Wrigley, president, Peoria; Wilbur Goddard, Freeport, Norman R. Johnson, Taylorville, Homer Robinson, Lincoln, Louis Abenbrink, Edwardsville, and Barnett Faroll, Chicago, all vice-presidents; Frank Stebbins, secretary, 231 South LaSalle Street, Chicago; Leo J. Doyle, treasurer; Kenneth W. Lineberry, Arthur Farrell, Henry Stefany, Leo J. Doyle, Floyd Cerf, T. E. Gormon, all of Chicago; H. J. Harshbarger, Urbana; William D. Ward, Decatur; W. M. Patterson, Williamsville; A. C. Koch, Breese; W. S. Whipple, Genoa; G. V. Johnson, Joliet; F. E. Morrison, Marion; A. L. Lake, Waukegan; L. W. Marrow, Joy; Victor C. Dewein, Decatur; E. Huot, Kankakee; D. S. Hahan, Lexington; Gail Butterfield, Pecatonica, and N. R. Peine, Minier.

Leaders of recognized and established groups in the state who have been joint sponsors with Illinois Farm Bureau leaders of many conferences during the past several years and know the IAA probably will not give serious consideration to either the pamphlet or its authors.

However, the appearance of this pamphlet again emphasizes the constant need for an informed membership to present the true facts about Farm Bureau and its cooperatives and thus improve local community relations.

For example, the pamphlet carries a picture of the new home of the IAA in Chicago and states, "Boasting that this valuable Chicago Loop property was purchased with cash, the association neglects to say that the building was bought with income tax-exempt profits collected from 14 associated cooperative companies, engaged in almost every type of business in Illinois."

The facts are these:

1. The IAA purchased the building with funds from membership dues. The IAA receives no profits from the operations of any of the associated cooperative companies.

2. As most Farm Bureau members probably know, the funds of the Association are kept entirely separate from any of the associated companies. Each of the associated companies operates independently and keeps its funds separate.

3. Separate annual reports and certified audits are made and published by the Association and the associated cooperative companies. The records are open for all to see.

The other charges in the pamphlet are aimed at the associated companies with Illinois Farm Supply Company as center target. The main impression the pamphlet seeks to give is that Illinois Farm Supply Company enjoys an unfair tax advantage over private business in Illinois.

Here are the facts:

1. Illinois Farm Supply and its local county service companies, like all other Farm Bureau-type cooperatives in the state, are subject to every state and local tax that a privately-owned business or corporation is.

2. Illinois Farm Supply Company returns to its member companies a very large proportion of its net income in the form of patronage refunds, and such patronage refunds are subject to federal income tax in the hands of member companies.

Likewise, patronage refunds paid to members of county service companies on products used in the production of agricultural commodities are subject to federal income tax in the hands of the farmer member.

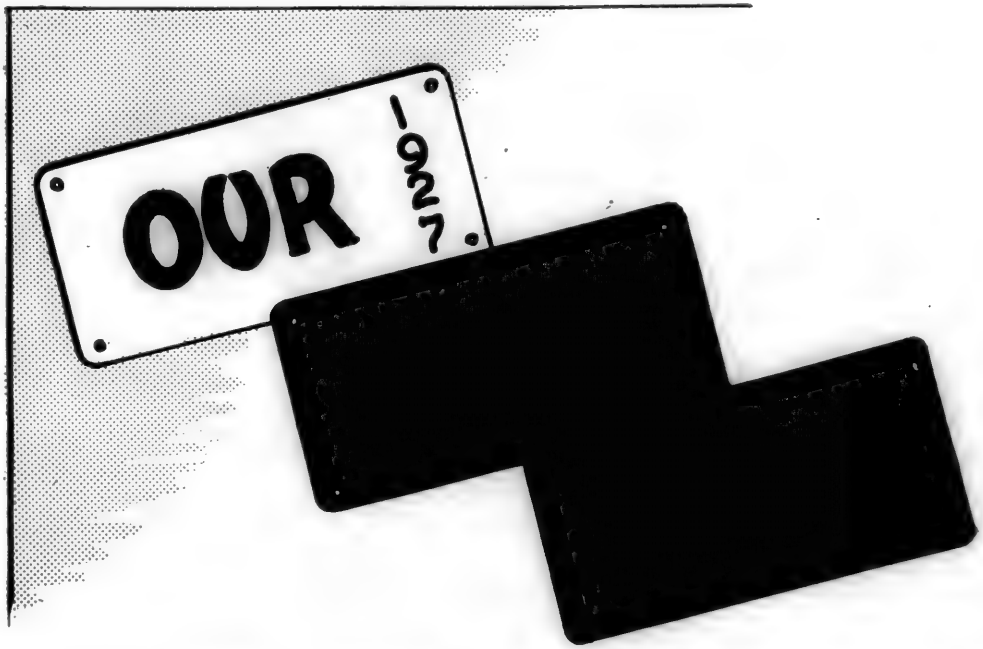
3. If any corporation will agree in advance to pay back a certain fixed proportion of its earnings as patronage refunds to its customers, such patronage refunds are deductible in determining net taxable income and are not subject to income tax. Thus any corporation that wishes to share its profits with its customers can arrange the conduct of its business so as to receive the same tax consideration as any cooperative. A federal district court decision supports this statement.

Above is front page of pamphlet attacking the Illinois Agricultural Association and Associated Companies.

It is a matter of record that neither the Illinois Agricultural Association nor its associated companies has ever sought a tax advantage over private business.

The IAA board of delegates adopted a resolution at the annual meeting in Chicago on Nov. 29, 1945 which supports the above statement.

The resolution stated that the IAA would not oppose changes in the internal revenue law which would exempt corporations from paying income tax on that portion of their annual earnings distributed to stockholders as dividends.



. . . *of AUTO INSURANCE SERVICE TO ILLINOIS FARM BUREAU MEMBERS*

Your AUTO insurance company ended its first year of operation, in 1927, with 6,427 policies in force. Today, twenty years later, there are 158,000 auto policies in force among Farm Bureau members in Illinois.

Your AUTO insurance company has achieved this growth by providing better coverage at lower cost. First, insurance is sold exclusively to Farm Bureau members, farmers who, as a class, are preferred risks. Because your auto insurance company belongs to YOU, the savings from this proven plan of operation are passed back each year as dividends.

If you are not taking advantage of this insurance protection, let your insurance agent at the Farm Bureau show you how to buy greater coverage for less.

BIGGEST and BEST

BIGGER and better than any in history. That was the record of the Eighth Annual Farm Sports Festival as it was written by the 4,000 farm athletes who competed for state honors on the University campus at Champaign-Urbana last month.

Clean, hard play marked the two day farm Olympics as softball teams, bowlers, and crack rifle shots converged at the University of Illinois campus from the four corners of the state.

As a symbol of this fine spirit of sportsmanship, and representing these thousands of rural athletes, Evelyn Koski, pretty star pitcher of the winning DeKalb women's softball team, was crowned Queen of Sports by Doug Mills, University director of athletics, during the closing ceremonies of the festival.

More than 20,000 farm folks were drawn to the two day sports pageant to watch 200 softball teams, archers, bowlers, swimmers, and hundreds of other sport specialists go through their paces.

For sheer staying power among the softball teams the McLean County Boys' 4-H Club softball team from Hudson was unofficially, the champion of champions. They emerged the one unbeaten team among the 54 teams in their division.

Thursday evening, after a full day of sport and folk festival competition, all this was set aside for the time, and the folks attending the two day funfest took time out for dancing and entertainment.

During these Thursday evening hours you could hear in Huff gym the gay notes of the fiddle player, and the sing-song chant of the caller as hundreds of square dance couples scraped and bowed to old time music.

Over at the Union building the young folks danced and romanced to the mellow strains of Dick Cisne's swing band. Outside a third program was in progress as entertainers from the afternoon's folk festival performed under a canopy of stars and moonlight before an audience of 3,000 rural music lovers.

Stealing this amateur show were Billy McFarland, 10, and Gary Grimes, 8, from Edgar county, who, with their saxaphone and accordion, got an extra bow for "Peg O' My Heart" and "Memories."

During this outdoor show Mary Naffsiger and Paul Woerner of the Tazewell county 4-H clubs presented J. C. Spitler, representing the College of Agriculture, with a check of $2,265.85 for the 4-H club camp at the Allerton estate.

In the meantime, at Huff gym the square dancers were giving a big hand to the Danish folk dancers from Ring-

SPORTS FESTIVAL

sted, Iowa, who demonstrated French, Austrian, and German folk dances. The group were winners in last year's Iowa sports festival, and were invited as an exchange number between Iowa and Illinois.

The evening's fun didn't keep the folks from being ready, bright and early Friday morning, to finish their individual and team competitions. In one of the most popular of the special events, Vermilion won the tug o'war contest, a repeat performance for them.

Out at the grounds of the Champaign gun club, the skeet and trap shoot was going full blast. Gerald Heiden, from Bloomington, a dead shot with a shotgun, broke 50 clay pigeons for a perfect score in the skeet shoot.

At the track meet held Friday morning in the football stadium, little Nancy Terwillinger, 13, of Bureau county thrilled both boys and girls entered in the high jump by clearing the bar at four feet, ten inches. This was eight inches higher than the winning jump in the senior division for girls 16 and older.

In another of the special events, Turner Mayfield, from Adams county, drew cheers as he successfully defended his title as state woodchopping champion by chopping through a 10-inch white oak log in 81.8 seconds to win.

During the noon hour on Thursday and Friday as folks stopped long enough to eat their lunch, a good many gathered around the WLS microphone in front of Huff gym to hear Art Page broadcast the WLS-Dinnerbell Hour from the Sports Festival headquarters.

At the Friday afternoon open air show at the football stadium, the crowd cheered the district winners as representatives received their county's trophy from the newly elected Queen of Sports. They were also introduced over the air by stations WLS and WILL.

Champaign county was winner of District 1 and also piled up the greatest number of points. Altogether, there were 92 counties entered in the Festival.

Other district winners were: district 2, DeKalb; district 3, Whiteside; district 4, Peoria; district 5, St. Clair, and district 6, Randolph.

The IAA staff whipped the farm advisers in their annual softball tilt by a whopping score of 17 to 5. This is the second consecutive win for the IAA staff and reports are that the farm advisers are scouting for new material. President Shuman was on the mound and Vice-President Floyd E. Morris caught in the first inning for the IAA staff.

It was a great show that the rural athletes, dancers, and specialty entertainers staged. As the two day sports drama came to a close, they expressed one almost universal hope. They wanted to be back in '48, to make it even bigger and better than it was this year!

The Illinois State Rural Chorus sings to a large crowd that overflowed the lawn in front of the University Auditorium at the Thursday evening program of entertainment.

BASEBALL

Champaign won. Semi-Finals: Henderson 10, DeKalb 3; Champaign 12, Stephenson 2. Finals: Champaign 2, Henderson 1.

SOFTBALL

Adult County League Division — 8 teams played, Vermilion won. Finals: McLean 6, St. Clair 5; Vermilion 7, Champaign 5. Finals: Vermilion 5, McLean 4. Consolation: St. Clair won over Champaign.

All County Division — 27 teams played, DeKalb won. Semi-finals: Moultrie 8, Champaign 1; DeKalb 5, Iroquois 4. Finals: DeKalb 5, Moultrie 2. Consolation: Iroquois 5, Champaign 0.

Farm Bureau Members 35 Years and Over — 13 teams played, Edgar won. Semi-finals: Edgar 6,

Members of the DeKalb girls open softball team, state winners, L. to R., front: Stevens, Wennblnd, Challand, B. Colby, L. Colby and Bait. Back row, Rottenburg, Ziegler, Pesut, Koski (Queen of Sports), Wiebert, Williams and Farsell.

Winner of the Rural Youth softball division state title is Fulton county. Front, L. to R.: Irons, Davis, Estes, Morrelli, K. Postin, Combs, McMahon; back: Sleeper, youth assistant; Ulm, Munson, Putman, H. Postin, J. Schleich, G. Schleich, Locke, Roberts, Knickbocker, and E. D. Lyon, IAA director, young people's activities.

Here is the DeKalb county team, winners of the 1947 All-County Softball title. L. to R. front: Chapman, Bunig, Challand, Park, R. Challand, Stahl. Back: Prestegaard, Hage, Mosher, Glotty, Tompkins, Herold, W. Challand.

Marshall-Putnam 1; Peoria 13, St. Clair 3. Finals: Edgar 4, Peoria 3. Consolation: Marshall-Putnam 1, St. Clair 0 (forfeit).

Boys 4-H Division — 54 teams played, McLean won. Semi-finals: McLean 3, Kane 2; Adams 16, Jackson 6. Finals: McLean 3, Adams 2. Consolation: Kane 1, Jackson 0 (forfeit).

Boys' Rural Youth Softball Division — 32 teams played, Fulton won.

Semi-finals: DeKalb 11, Champaign 0; Fulton 3, Ogle 0. Finals: Fulton 1, DeKalb 0. Consolation: Ogle 6, Champaign 5.

Girls' 4-H Club Division — 16 teams played, Winnebago won.

Semi-finals: Winnebago 14, Vermilion 4; McLean 8, Jackson 7. Finals: Winnebago 22, McLean 0. Consolation: Vermilion 22, Jackson 15.

Girls' Open Division — 9 teams played, DeKalb won. Semi-finals: Peoria 6, Lee 4; DeKalb 11, Randolph 0. Finals: DeKalb 13, Peoria 2. Consolation: Lee 1, Randolph 0 (forfeit).

ARCHERY

Men — 1st, Francis Hazen, Champaign; 2nd, Ken Berry, Vermilion; 3rd, John Livengood, Piatt.

Women — Senior — 1st, Mrs. Harry Gebhart, Champaign; 2nd, Mrs. Lela Wildman, Piatt.

Women — Junior — 1st, Mary Gebhart, Champaign; 2nd, Shirley Wisted, DeKalb; 3rd, Jean Quinn, McLean.

BOWLING

Mens' Open Singles — 1st, W. Ford, Kendall; 2nd, Don Gordon, Champaign; 3rd, Earl Murdock, Mason.

Mens' Open Team — 1st, Ogle; 2nd, Kendall; 3rd, Macoupin.

Rural Youth Mens' Singles — 1st, H. Whaley, McDonough; 2nd, G. Cross, Ogle; 3rd, R. Parkins, McDonough.

Rural Youth Boys' Team — 1st, Ogle; 2nd, McDonough; 3rd, DeKalb.

Womens' Open Singles — 1st, M. Vale, St. Clair; 2nd, Mrs. Earl Green, St. Clair; 3rd, E. Lynn, Mason.

Womens' Open Team — 1st, Champaign; 2nd, Mason; 3rd, St. Clair.

Rural Youth Girls' Singles — 1st, Alice Welton, Randolph; 2nd, M. Van Gotegham, Rock Island; 3rd, H. Schnulle, Ogle.

Rural Youth Girls' Team — 1st, DeKalb; 2nd, Ogle; 3rd, Rock Island.

Rural Youth Mixed Doubles — 1st, Ogle; 2nd, Ogle; 3rd, DeKalb.

Here's the Edgar county team that won the 1947 Over 35'ers softball title. L. to R., front: Rice, Gunn, Sisson, Lutz, Staley. Back: Songhers, John Neoman, Hade Neeman, Spillman, McCoy, Dailey, Rhoges.

Here's the champion boys 4-H club team from McLean county, left to right: Francis, Verkler, Birkey, Bright, Don Hinshaw, Zimmerman, Vernon Hinshaw, Wierman (Mgr.), Beverage, and Sigler.

This is the softball team from Winnebago county that won the 1947 Girls 4-H title. L. to R. front: McDonald, Gable, Flora, S. Larson, Rasmusson. Back: Barber, Newell, Crockett, Blake, Warner, B. Larson, Paris, P. Larson.

CHECKERS

(Tied for 1st and 2nd) D. A. Cadwell, Knox, and Homer Doane, Piatt; 3rd, George Magert, Vermilion.

4-H PHYSICAL FITNESS

Individual — 1st, LaVerne Reitz, Iroquois; 2nd, Delores Park, Effingham; 3rd, Barbara Countryman, Henry.

Team — 1st, Edgar; 2nd, Henry; 3rd, McLean.

Tumbling Team — 1st, Wabash; 2nd, Saline; 3rd, Champaign.

HOG CALLING

1st, Al De Cap, Whiteside; 2nd, Gale Yocum, Adams; 3rd, Joseph Rahn, Peoria.

SKEET SHOOT

Individual — 1st, J. Heiden, McLean; (tied for 2nd place) J. C. Beem, Shelby, Connie Foley, Edgar, John Rosalius, Iroquois, F. Durst, Logan, and Keith Rothwell, Logan.

Junior — 1st, J. Marble, Vermilion; 2nd, E. Jackson, Champaign; 3rd, R. Anderson, DeKalb.

Father and Son — 1st, Vermilion; 2nd, Macon; 3rd, McLean.

Two-man Team — 1st, Logan; (tied for 2nd and 3rd) McLean, Kankakee.

Five-man Team — 1st, Logan; 2nd, McLean; 3rd, Shelby.

HORSESHOES

Singles — Men: 1st, Earl Bomke, Sangamon; 2nd, Leslie Long, Lee; 3rd, James Martin, Champaign.

Singles — Women, Senior: 1st, Mrs. Ernest Schvich; 2nd, Mrs. Ola Harshbarger, Piatt.

Singles — Women, Junior: 1st, Mrs. Glen Coles, Edwards; 2nd, Mrs. Laufer, Kane.

Doubles — Men: 1st, Champaign; 2nd, Kendall; 3rd, Piatt.

Doubles — Women, Senior: Champaign.

Doubles — Women, Junior: Champaign.

FOLK FESTIVAL

Only those with A ratings listed

Family Singing — Sanderson's DeKalb; George Castle Family, Vermilion; Fred and Lester Ottinger, Kane.

Choral Groups — Sextette, Vermilion; Rev. Robert Haley, Kendall.

Community Song Leaders — Edwin Dew, Ogle; Marian McCormick, La Salle.

Novelty Band — Mrs. Laura Gieseking, leader, Effingham.

4-H Chorus — Ralph Schlifp, Livingston; Wayne Churchhill, Will.

Square Dance Bands — Vance Baxter, Douglas; Hersley Bard, Champaign.

Folk Dance — Don McClay, Kane; F. J. Basting, Macoupin.

Square Dance — Harley Andrews, Knox; E. R. Albin, Douglas; Bill Timpoet, Perry; Edgar Frederick, Champaign; Alice May Kamper, St. Clair; Frank Barron, La Salle; Ralph McKenzie, Kane; M. J. Morgan, Rock Island.

Square Dance Callers — Bill Timpoet, Perry; Lester Worley, DeKalb; Rollin Farnam, Henry; Ray Leach, La Salle.

Barbershop Quartettes — Laverne Reitz, Iroquois; Richard Hoerner, Livingston; Melvin Hagenbuch, La Salle; William Rushton, Kendall.

Music Specialties — Lyle Tombling, Grundy; Katherine Ippenson, Adams; Ilene Hissong, Champaign; Urbana Rhythm Makers, Champaign; Wilma Hickman, Vermilion; Seymour Trio, Vermilion; Esther Dunavin, Vermilion; Carol Neureuther, Bureau; Lyle Zehr, Livingston; Charlene Halverson, La Salle; Fred Ottinger, Kane; Fred and Lester Ottinger, Kane; Mrs. Glen Melms, Kane; Robert Williams, Kane; Frank Pagoda, Kane; B. McFarland and G. Grimes, Edgar; Helen Wiltamuth, Rock Island; Bill Kinter, Crawford; Floyd Montgomery, Henry; Lester Ottinger, Kane; Hazel Stetley, Henry, Vocal; Hazel Stetley, Henry, Accordion.

Dance and Dramatic Specialties — Polly Savage and Mary Lou Wilson, Champaign; Agnes Layden, Vermilion; Carolyn Garwood and Sharalyn King, Vermilion; Glen Cole, Livingston; Pat Norris, Kane.

RIFLE SHOOT

Individual — Men: (Tied for 1st and 2nd place) Walter Hahn, Mason, and Claude Durfee, DeWitt; 3rd, Nelson Weber, Livingston.

Individual — Women: 1st, Mrs. Florence Howe, DeKalb; (tied for 2nd and 3rd place) Mrs. Robert Taylor, Champaign, and Mrs. Nelson Weber, Livingston.

Team — Men: 1st, Champaign; 2nd, Livingston; 3rd, DeKalb.

Team — Women: 1st, DeKalb; 2nd, Champaign.

SWIMMING

Boys — (16 and older) 50 Yard Swim: 1st, William Lundeen, Kane; 2nd, Jack Keller, Coles; 3rd, Jesse Dowell, Champaign.

Boys — (15 and under) 50 Yard Swim: 1st, John Gilbert, Edgar; 2nd, Harry Wright, Jr., DuPage; 3rd, Jim Ransom, Greene.

Girls — (16 and older) 50 Yard Swim: 1st, Lora Martin, Champaign; 2nd, Jean Pitsch, Peoria; 3rd, Carol Neureuther, Bureau.

Girls — (15 and under) 50 card Swim: 1st, Jo Allice Davis, Champaign; 2nd, Donna Davis, Champaign; 3rd, Mary Ann Rasmusen, DeKalb.

Boys — (16 and older) Diving: 1st, Scott Judy, Vermilion; 2nd, Arlo Peplow, Kane; 3rd, William Lundeen, Kane.

Boys — (15 and under) Diving: 1st, John Gil-

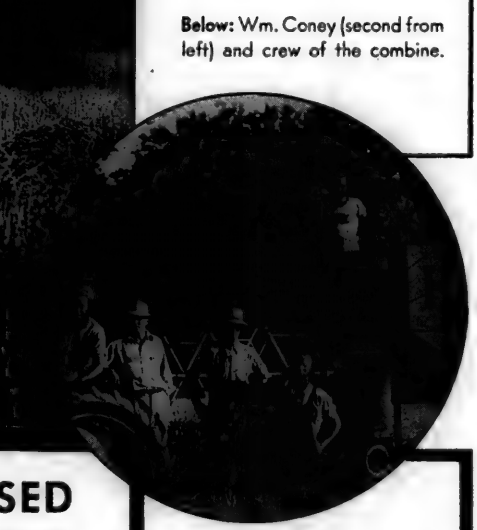
Below: Wm. Coney (second from left) and crew of the combine.



TIME-TESTED LUBRICATION

BLUE SEAL GREASES USED IN HISTORIC EQUIPMENT

Down around Sheldon, Illinois, this combine has been harvesting small grain for the past 16 years. It was one of the first combines in this community and is the oldest one still in operation. William Coney uses it to harvest all of his small grain on his 930 acres.

Bill says he has used Blue Seal greases and oils exclusively since the Service Company was organized in 1931. He says their company and the combine started operations about the same time and they've both been going ever since—and both on Blue Seal!

This just shows how another Farm Bureau Member has benefitted through the high quality standards established and maintained by Illinois Farm Supply Company.

BLUE SEAL

BLUE SEAL FARM GREASES

LOCO LUBE
Super quality gun grease that "stays put".

ALUMINATE GUN
Super quality gun grease that resists heat and handles with ease.

HARVESTER GUN
Excellent product designed for corn pickers and combines.

GRAPH SEAL GUN
Excellent gun grease containing powdered graphite.

HI-TEMP BEARING
For high speed, high temperature bearings.

WATER PUMP
Provides lubrication and seal in water pumps.

HUSKER ROLLER
Tacky compound for use on corn picker rollers.

FARM PRICE OUTLOOK

(Continued from page 6)

Wheat, extension experts declared, would supplement the grain feed supply and the high-protein feeds will depend on yields of cotton, flax, and soybeans. The planted acreage in those crops was larger than a year ago.

Hog prices are not expected to decline from present levels during the next several months except for a moderate seasonal decline. The number of hogs to be marketed this fall and winter will be as large or larger than a year ago. They will be marketed in lighter weights, however, than last winter.

Prices of feeder cattle are expected to remain high, especially heavy feeders. The supply is not large and they will be in demand for slaughtering and short-time feeding.

The final size and quality of the 1947 corn crop is an important factor in the cattle feeding outlook, it was said. In past years small corn crops have caused reductions in corn-belt cattle feeding.

Because of high feed costs the profits from a strictly grain feeding program will depend upon price margins between fed cattle and feeder cattle. At present these margins are wide and there are no indications that they will be wiped out in the near future. As we cannot be sure how long prices of fed cattle will stay at present levels, long-time programs on a drylot basis are risky. Cattle-feeding programs which will make maximum use of pastures and roughages offer the best opportunity for profit.

NOTICE OF ANNUAL MEETING COUNTRY MUTUAL CASUALTY COMPANY

Notice is hereby given that the annual meeting of the members of Country Mutual Casualty Company will be held in the Jefferson Hotel, St. Louis, Missouri, on Tuesday, the 18th day of November, 1947, at 1:00 P.M. to receive, consider and if approved, confirm and ratify the reports of the officers and of the Board of Directors and the acts and proceedings of the Board of Directors of the Company for the fiscal year ending September 30, 1947; to elect directors for the coming year and for the transaction of such further and other business as may properly come before the meeting.

Otto Steffey, Secretary

NOTICE ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of October, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During October, annual meetings will be held in Adams, Fayette, Hamilton, JoDaviess, Madison, Menard, Montgomery, Peoria, Pike, Pope-Hardin, Pulaski-Alexander, Stark, Washington and White Counties.

Illinois Loses Interstate Title To Iowa Nine

IOWA'S state Farm Bureau baseball champion, the Palo Alto county nine, gained sweet revenge on the state of Illinois Sept. 13 at Urbana by defeating the Illinois champ, Champaign county Farm Bureau, in both ends of a double-header, 11-1 and 2-1. The games were played on the Urbana baseball diamond.

The northern Iowa team, which won the state title this year for the second consecutive time, lost a pair of tilts to Illinois' 1946 titleholder, Will county, in the inaugural series of the rivalry last year.

In the first game Saturday the Iowans hit hard, early, and often. A pair of blows in the first failed to result in a run, but two doubles and two singles in the second frame gave Palo Alto a 3-0 lead.

The Iowans lengthened the margin by pounding across four more runs on six hits in the third inning. A double by Moose Stafford was the big blow.

Ehm Franzen, who started for Champaign, was removed in the fourth, but Iowa teed off on brother Dick for two more counters. Then Dick Franzen settled down and held Palo Alto scoreless until the eighth, when two more runs crossed the plate.

Stafford and Clete Salz each racked up four hits for Iowa. Three of Salz's blows were doubles.

Illinois' lone bit of action came in the sixth inning, as Captain Everett Hedrick singled, advanced on a walk to Dick Franzen, and scored when Butch Kicker booted Herb Johnson's grounder.

Earl Shiner of Iowa and John Loeschen of Illinois locked horns in a tight pitching duel in the second game of the series, with Loeschen having the better record until the Iowa ninth inning.

Champaign county scored first in the game, Russ Hyde singling in the fourth to start things moving. An error and a wild pitch advanced him to third, and Henry Osterbur's single scored him.

Meanwhile, Loeschen held Palo Alto to just one hit until the seventh inning. In the Iowa half of the frame a long triple to deep center field by Earl Shiner followed by a towering fly to right by Moose Stafford netted the tying run for Iowa.

Then in the ninth, with two out, Iowa's Ralph Frederick was safe on an error, stole second, went to third on another error, and scored the winning marker on Clete Salz's triple to right.

Defensive star of the second game was Champaign's Dick Squire, who threw a strike from left field to home to cut off one Iowa run, and made a leaping, one-hand catch of a long liner to stop another Palo Alto rally.

Dick Franzen, Champaign catcher, suffered a broken collar bone in the seventh inning when he and Shiner collided at the plate.

Sixteen Iowa players made the trip to Urbana in a chartered bus. Accompanying them were 15 rooters, including four wives.

Capt. Everett Hedrick of the state champion Champaign County baseball team receives trophy from Otto Steffey, chairman of the Sports Festival, after defeating Henderson, 2-1, to win state title. At far left is Pitcher E. W. Franzen, and at far right is E. C. Herriott, president of the Champaign County Farm Bureau. Steffey is from Henderson county.

Champaign County's State Farm Bureau champion baseball team, L. to R., front: D. Franzen, Herb Osterbur, E. Franzen, Ehmen, Henry Osterbur, Johnson, Loeschen. Back: Hendrick, Hyde, Clow, Eaton, Chambliss, and Squire.

ILLINOIS FARM SUPPLY DELIVERS 3,000,000th GALLON OF SOYOIL PAINT

WHEN the 3,000,000th gallon of the Illinois Farm Supply Company's Soyoil paint was delivered to the farm of President Charles B. Shuman of the Illinois Agricultural Association the other day, it further emphasized the complete acceptance of Soyoil paint as a high quality product made from beans produced on our farms.

Three million gallons is enough to paint every building on every farm of every one of Illinois' 146,000 Farm Bureau members.

Soyoil paint has come a long way since those days 16 years ago when the Illinois Agricultural Association in cooperation with the Agricultural Experiment Station at the University of Illinois decided to find new uses for soybeans.

At that time Illinois was producing and marketing one-half of all the soybeans in the United States. Supply exceeded demand and a low market price resulted because of the limited uses for soybean products then.

Assigned to the job of research and formulation of a paint manufactured with soybean oil as the chief ingredient, G. W. Bunting of the Illinois Farm Supply Company contacted 17 paint manufacturers before one was found willing to spend the time and money to give soybean oil the proper treatment and processing so it could be used satisfactorily in the making of paint.

President Charles B. Shuman of the Illinois Agricultural Association lost no time in putting the 3,000,000th gallon of Soyoil paint to work at his farm home in Moultrie county.

Bunting is emphatic in pointing out that the move by the IAA and its affiliate, the Illinois Farm Supply Company, was not done in the hope of promoting business, but for the sake of "bettering the lot of Illinois farmers."

Since then the uses for soybeans have become wider—soybean flour, soybean oil meal for feeding, other edible uses, and for plastics. The demand for soybeans thereby has become greater assuring Illinois farmers a better price and a sounder market.

But the development of Soyoil paint was no overnight affair. Many problems had first to be overcome. For instance, one of the main problems was the slow-drying property of soybean oil which had to be speeded up.

To the credit of many Farm Bureau people who bought the first Soyoil paint on faith, Bunting said: "I would like to shake the hand of every one of those farmers who bought Soyoil paint, because these men laid the foundation for much that Illinois Farm Supply Company has done since—in other fields as well as the paint field."

Successful performance of Soyoil paint on millions of Illinois farm buildings also has proved the soundness of the vast amount of research and experimentation originally done by Illinois Farm Supply Company.

NOTICE OF ANNUAL MEETING ILLINOIS AGRICULTURAL ASSOCIATION

Notice is hereby given that the annual meeting of the members of Illinois Agricultural Association will be held in the Opera House of the Municipal Auditorium, St. Louis, Missiouri, on the 19th day of November, 1947, at 9:30 o'clock A.M. for the following purposes:

To receive, consider and if approved, to ratify and confirm the reports of the officers and the acts and proceedings of the Board of Directors and officers in furtherance of the matters therein set forth since the last annual meeting of members of the Association;

To approve, ratify and confirm the several purchases heretofore made by this Association of stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein;

To secure consent and authorization to acquire on behalf of the Association by purchase certain stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein;

To elect seven (7) members of the Board of Directors to serve for a term of two years;

To elect a President and Vice-President who shall also serve as directors for a term of one year;

To consider and act upon such proposed amendments of the Articles of Incorporation or of the By-Laws of Illinois Agricultural Association as may be properly submitted;

For the transaction of such other business as may properly come before the meeting.

Paul E. Mathias, Secretary

Illinois Loses Interstate Title To Iowa Nine

IOWA'S state Farm Bureau baseball champion, the Palo Alto county nine, gained sweet revenge on the state of Illinois Sept. 13 at Urbana by defeating the Illinois champ, Champaign county Farm Bureau, in both ends of a double-header, 11-1 and 2-1. The games were played on the Urbana baseball diamond.

The northern Iowa team, which won the state title this year for the second consecutive time, lost a pair of tilts to Illinois' 1946 titleholder, Will county, in the inaugural series of the rivalry last year.

In the first game Saturday the Iowans hit hard, early, and often. A pair of blows in the first failed to result in a run, but two doubles and two singles in the second frame gave Palo Alto a 3-0 lead.

The Iowans lengthened the margin by pounding across four more runs on six hits in the third inning. A double by Moose Stafford was the big blow.

Ehm Franzen, who started for Champaign, was removed in the fourth, but Iowa teed off on brother Dick for two more counters. Then Dick Franzen settled down and held Palo Alto scoreless until the eighth, when two more runs crossed the plate.

Stafford and Clete Salz each racked up four hits for Iowa. Three of Salz's blows were doubles.

Illinois' lone bit of action came in the sixth inning, as Captain Everett Hedrick singled, advanced on a walk to Dick Franzen, and scored when Butch Kicker booted Herb Johnson's grounder.

Earl Shiner of Iowa and John Loeschen of Illinois locked horns in a tight pitching duel in the second game of the series, with Loeschen having the better record until the Iowa ninth inning.

Champaign county scored first in the game, Russ Hyde singling in the fourth to start things moving. An error and a wild pitch advanced him to third, and Henry Osterbur's single scored him.

Meanwhile, Loeschen held Palo Alto to just one hit until the seventh inning. In the Iowa half of the frame a long triple to deep center field by Earl Shiner followed by a towering fly to right by Moose Stafford netted the tying run for Iowa.

Then in the ninth, with two out, Iowa's Ralph Frederick was safe on an error, stole second, went to third on another error, and scored the winning marker on Clete Salz's triple to right.

Defensive star of the second game was Champaign's Dick Squire, who threw a strike from left field to home to cut off one Iowa run, and made a leaping, one-hand catch of a long liner to stop another Palo Alto rally.

Dick Franzen, Champaign catcher, suffered a broken collar bone in the seventh inning when he and Shiner collided at the plate.

Sixteen Iowa players made the trip to Urbana in a chartered bus. Accompanying them were 15 rooters, including four wives.

Capt. Everett Hedrick of the state champion Champaign County baseball team receives trophy from Otto Steffey, chairman of the Sports Festival, after defeating Henderson, 2-1, to win state title. At far left is Pitcher E. W. Franzen, and at far right is E. C. Herriott, president of the Champaign County Farm Bureau. Steffey is from Henderson county.

Champaign County's State Farm Bureau champion baseball team, L. to R., front: D. Franzen, Herb Osterbur, E. Franzen, Ehmen, Henry Osterbur, Johnson, Loeschen. Back: Hendrick, Hyde, Clow, Eaton, Chambliss, and Squire.

ILLINOIS FARM SUPPLY DELIVERS 3,000,000th GALLON OF SOYOIL PAINT

WHEN the 3,000,000th gallon of the Illinois Farm Supply Company's Soyoil paint was delivered to the farm of President Charles B. Shuman of the Illinois Agricultural Association the other day, it further emphasized the complete acceptance of Soyoil paint as a high quality product made from beans produced on our farms.

Three million gallons is enough to paint every building on every farm of every one of Illinois' 146,000 Farm Bureau members.

Soyoil paint has come a long way since those days 16 years ago when the Illinois Agricultural Association in cooperation with the Agricultural Experiment Station at the University of Illinois decided to find new uses for soybeans.

At that time Illinois was producing and marketing one-half of all the soybeans in the United States. Supply exceeded demand and a low market price resulted because of the limited uses for soybean products then.

Assigned to the job of research and formulation of a paint manufactured with soybean oil as the chief ingredient, G. W. Bunting of the Illinois Farm Supply Company contacted 17 paint manufacturers before one was found willing to spend the time and money to give soybean oil the proper treatment and processing so it could be used satisfactorily in the making of paint.

President Charles B. Shuman of the Illinois Agricultural Association lost no time in putting the 3,000,000th gallon of Soyoil paint to work at his farm home in Moultrie county.

Bunting is emphatic in pointing out that the move by the IAA and its affiliate, the Illinois Farm Supply Company, was not done in the hope of promoting business, but for the sake of "bettering the lot of Illinois farmers."

Since then the uses for soybeans have become wider—soybean flour, soybean oil meal for feeding, other edible uses, and for plastics. The demand for soybeans thereby has become greater assuring Illinois farmers a better price and a sounder market.

But the development of Soyoil paint was no overnight affair. Many problems had first to be overcome. For instance, one of the main problems was the slow-drying property of soybean oil which had to be speeded up.

To the credit of many Farm Bureau people who bought the first Soyoil paint on faith, Bunting said: "I would like to shake the hand of every one of those farmers who bought Soyoil paint, because these men laid the foundation for much that Illinois Farm Supply Company has done since—in other fields as well as the paint field."

Successful performance of Soyoil paint on millions of Illinois farm buildings also has proved the soundness of the vast amount of research and experimentation originally done by Illinois Farm Supply Company.

LETTERS TO THE EDITOR

IMPASSABLE ROADS

WE were impressed by your article concerning rural roads in the May issue of the IAA RECORD. We feel a need to mention our situation.

The seven landowners on this side road pay road tax for others' use. We have paid our share of interest and principal for $20,000 in bond issues. A $100,000 county bond issue was voted last fall. Our township voted more than four to one against it, but we're going to help pay it.

This 1½ mile of dirt road is practically impassable for cars about 7 months of the year.

After years of false promises of improvement a road commissioner was elected in April, 1943, whose efforts opened a mile of new road in place of a narrow lane where broken and washed-out bridges were almost beyond crossing in safety.

This public official was taken fatally sick the first of July, 1943, and no official has taken any interest since. When they are told this great ditch across the road should be repaired before winter they simply ignore it.

The road can't be said to have ruts — they long ago passed into great ditches and holes. At best, it is really unsafe for cars, and when muddy or frozen, keeping off is the solution. Several cars have been damaged, one recently costing a $40.00 repair bill.

Gravel from a bank on one of the farms has been offered free, for 7½ years. A substantial donation of money has been offered. They will not spread the gravel.

The new road section, made 4 years ago, has never even been graded since. Drainage water from fields has stood on parts of it for months at a time.

Why should we have nothing for our road tax money? The ballot box is not the answer. What can we do?

Brown County

ONE-ROOM SCHOOL

ALTHOUGH I've had very little experience as a teacher and none as a professor of education, I was reared in the country, educated in a rural school, and indulged in eight years of courses in college and university, and I want to say that if the statement that graduates of one-room schools seldom go further than the little village high school is true, my home community and others I know of must be mighty exceptional.

And I can think of a good reason, too, why fewer rural pupils than urban pupils should continue beyond high school. The average rural pupil at 18 already has a sound training in an excellent occupation from helping his parents and neighbors which fits admirably with the courses and activities given by his local high school or farm adviser, home economics adviser and other leaders of rural activities.

And he, or she, is likely to find a place ready and waiting upon completion of the high school course. Parents often dread to see the children go away to college and university because they tend to become enamored of the white collar life and not see its inadequacies and disadvantages until it is too late.

I question whether the consolidated grade school is really better for our country in the long run. Social welfare workers have learned that it makes for a better society if orphans are put in good homes rather than kept in institutions, even though surrounded by experts.

Educators admit that the home is tending to become merely an economic unit, and that the school must try to make for the mounting deficiencies of modern home life. Why then, I ask you are they abolishing through their propaganda THE ONE TYPE OF SCHOOL THAT IS MOST LIKE AN OLD-FASHIONED FAMILY? Granted that the one room school building is likely to be inferior and equipment inadequate, the contact between teacher and pupil in the one-room school is much closer. A city cousin of 13 mentioned that fact the first time she ever visited our rural school.

The trouble is we have a weakness for doing things en masse. We feel that if there is the tramp of many feet, staff meetings where they talk jargon, questionnaires put out by "experts", etc., the most possible is being accomplished. But it is the contact between the child and the adult of sympathy, humor, common sense and active idealism that is a hundred times more important than all else together.

And what if teaching is not regarded as a life time profession? We need more good homes and ex-teachers are superior home makers and parents.

L. C. Olin
Champaign, Ill.

COVER PICTURES

Am making a scrap book of your cover pictures and I find I have lost the March 1947 Record. Would it be possible to get it now? Please let me know.

Here's Your Grain Marketing Plan

(*Continued from page 9*)

where it will be unloaded into the new 200,000 bushel elevator of Indiana Grain Cooperative. The grain will go from this elevator at Decatur, Ala. to a large feed mill owned and operated by the Southern States Cooperative group.

The first barge of corn destined for Decatur, Ala., left Havana River Grain Company dock on Sept. 11.

Prairie Grain Company organized about two years ago and has acquired building sites at Hennepin, Lacon and Ottawa. A 125,000 bushel elevator is now under construction at Hennepin. As this article is written, concrete is being poured at the Hennepin site.

Steel and lumber is on the ground at Lacon and construction will begin at this site at once.

The Ottawa site will be developed within the next few months depending on the progress made at Hennepin and Lacon.

The Producers River Grain Company at Morris, will serve Grundy, Iroquois, Livingston, Kendall, La Salle and parts of Ford, Will, Kankakee and DeKalb counties. It plans to either purchase and operate the elevator now owned at Morris by Illinois Grain Corporation, or build a new river house.

A series of district Farm Bureau meetings was completed at DeKalb Sept. 9.

NOTICE OF ANNUAL MEETING COUNTRY MUTUAL FIRE COMPANY

To all Policyholders and Members:
Notice is hereby given that the annual meeting of the members of Country Mutual Fire Company will be held in the Jefferson Hotel, St. Louis, Missouri, on Tuesday, the 18th day of November, 1947, at 10:00 A.M. to receive, consider and if approved, ratify and confirm the reports of the officers and the acts and proceedings of the Board of Directors since the last annual meeting of members of the Company; to elect three directors for a term of three years, to elect two directors for a term of one year and for the transaction of such other and further business as may come before the meeting.

Geo. F. Hayes, Secretary

NOTICE OF ANNUAL MEETING ILLINOIS WOOL MARKETING ASSOCIATION

Notice is hereby given that the annual meeting of the shareholders and members of Illinois Wool Marketing Association will be held on Tuesday, the 18th day of November, 1947, at the hour of 9:30 A.M. in the DeSoto Hotel, St. Louis, Missouri, to elect directors for the succeeding year; to receive and if approved, confirm the report of the Board of Directors of the Association for the fiscal year ending September 30, 1947; to consider and if approved, ratify and confirm all of the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the shareholders and members of the Association; and for the transaction of such further and other business as may properly come before the meeting.

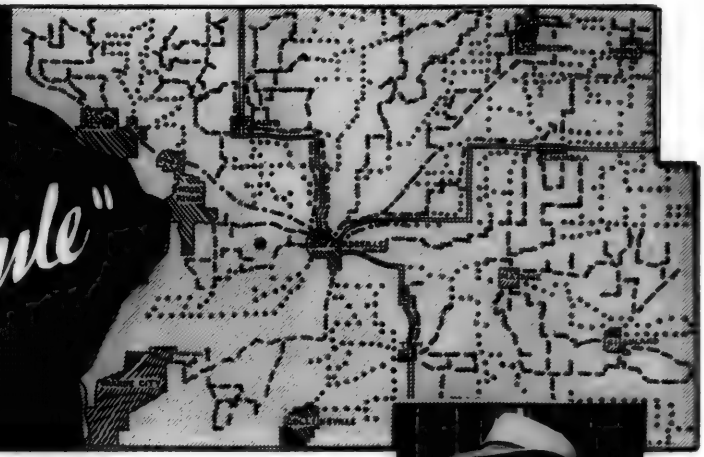
"He brings my feed on schedule"



The above map of Madison County shows how effectively the feed delivery route system works and how completely it is covered by three feed salesmen every two weeks. Dotted lines show each day's route of the first week and the broken lines show routes covered the second week.

Henry C. Heepke

BLUE SEAL "Direct-to-the-Farm" Service saves time and expense for Henry Heepke

Here's what Mr. Henry Heepke, who farms 210 acres in Madison County, has to say about his salesman's Blue Seal route system:

"John, my salesman, brings the feed on his regular delivery day and leaves it whether I'm there or not. He puts the feed right in the bin where I want it. I have a standing order for feed for two weeks and unless there is some change, that's what he brings. I never have to worry about being out of feed!

"You know we get pretty busy sometimes and can't take time to go in to town to pick up feed."

"If it wasn't for this route system, my hogs might have to go without their supplements for 2 or 3 days at a time during the busy seasons—and that's no way to raise hogs!"

Blue Seal Feed Warehouse at Edwardsville, hub of Madison's Route Plan.

Feed is delivered direct to Barn lot.

Orders placed two weeks ahead of delivery date.

With the court of honor smiling their approval, IAA Director Otto Steffey, chairman of the Sports Festival, puckers up to kiss Queen of Sports Evelyn Koski, 28, of DeKalb county.

☆ ☆

Name First Queen of SPORTS

☆ ☆

MEET the Queen of Sports, pretty brunette Evelyn Koski of DeKalb, star fireball pitcher of the championship DeKalb women's softball team.

Evelyn was crowned Queen of Sports by Doug Mills, University of Illinois director of athletics, during the Friday afternoon ceremonies of the Sports Festival.

The crowning ceremonies were held in the University of Illinois football stadium.

Preceding the crowning ceremony Evelyn marched into the stadium leading the parade of championship winners. During the crowning Evelyn was flanked by her court of honor, composed of 13 women championship winners of Festival sports events.

Back in DeKalb Evelyn is not only a crack ball player and athlete, she also manages to crowd two other full time careers into a busy life.

She not only keeps house for her husband, a former captain in the air forces and veteran B-17 pilot of 51 missions, but also manages to find time to be secretary to the general manager of the DeKalb Agricultural Association.

Evelyn grew up and lived on a farm until her marriage two and one-half years ago. Her father, Harry Mosher of DeKalb, is a good Farm Bureau booster. He's been a member for 25 years! Evelyn and her husband joined Farm Bureau soon after they were married.

Evelyn has played an active part in the Rural Youth organization in DeKalb county. She was a member for about five years and at one time served as secretary of the DeKalb County Rural Youth.

She not only loves sports but she is Sports Festival minded too. For several years she has worked on the DeKalb County Sports Festival committee.

Evelyn is not the only member of her family that likes softball. Her brother, Bob Mosher, played on the all-county team at the state Sports Festival. A second brother, Jack, played on the second place DeKalb Rural Youth team.

Her sister, Dorothy, also appeared at the Sports Festival and was a member of the fifth place bowling team, placed first in shuffle board doubles and first in chair quoits doubles.

The DeKalb county girls softball team has gone to the state Sports Festival for six years and each year has come home with the championship.

Evelyn pitched on all of these six championship teams.

Boys (15 and under) — High Jump: 1st, Bennett Roadhouse, Greene; 2nd, Robert Harms, Iroquois; 3rd, James Funhouser (tie), Edgar.

Boys (16 and older) — 50 Yard Dash: 1st, Don Shuman, Whiteside; 2nd, Pete Bartram, Clark; 3rd, Jim Moore, Adams.

Boys (15 and under) — 50 Yard Dash: 1st, John Pinegar, Vermilion; 2nd, Ronald Reigel, Mason; 3rd, Jim Moreland, Vermilion.

Boys (16 and older) — Broad Jump: 1st, Jim Moore, Adams; 2nd, Don Shuman, Whiteside; 3rd, Don Schultz, DeKalb.

Boys (15 and under) — Broad Jump: 1st, John Pinegar, Vermilion; 2nd, Jim Torri, Bureau; 3rd, Robert Harms, Iroquois.

Boys (16 and older) — 100 Yard Dash: 1st, Jim Moore, Adams; 2nd, Don Stormer, Vermilion; 3rd, Don Chrisman, Vermilion.

Boys (15 and under) — 100 Yard Dash: 1st, John Pinegar, Vermilion; 2nd, Dick Jury, Woodford; 3rd, Ronald Reigel, Mason.

Boys (16 and older) — Relay: 1st, Whiteside; 2nd, Vermilion; 3rd, Bureau.

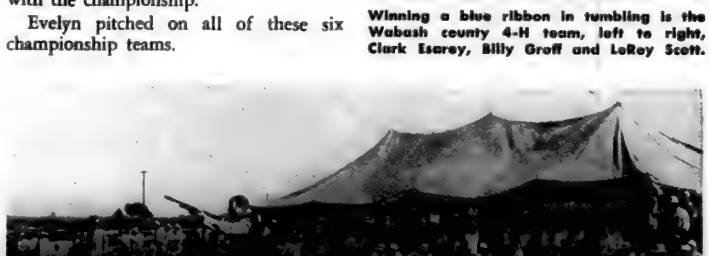
Girls (16 and older) — High Jump: 1st, Velma Ackerman, Tazewell; 2nd, Alice Rich, Crawford; 2nd, Gwen Laufer (tie), Kane.

Girls (15 and under) — High Jump: 1st, Nancy Twillinger, Bureau; 2nd, Agness Layden, Vermilion; 3rd, Jean Adams, Kane.

Girls (16 and older) — 75 Yard Dash: 1st, Shirley Lyons, DeKalb; 2nd, Janice Fager, Mason; 3rd, Bernice Ringhouse, Mason.

Girls (15 and under) — 75 Yard Dash: 1st,

Winning a blue ribbon in tumbling is the Wabash county 4-H team, left to right, Clark Esarey, Billy Groff and LeRoy Scott.



Charles Fray, Alton, crack shot for a cartridge company, gives demonstration during skeet and trap shoot at Champaign gun club.

Mary Gebhart, Champaign, takes first in women's archery.

On the word "Go," girls over 15 leave the edge of the University swimming pool to compete in one of the freestyle events.

Becky Ayars, Champaign; 2nd, Agness Layden, Vermilion; 3rd, Elaine Strube, Mason.

Girls (16 and older) — Broad Jump: 1st, Agness Layden, Vermilion; 2nd, Ann Schlorff, Vermilion; 3rd, Neta Estes, Clark.

TRAP SHOOT

Individual — Men: 1st, J. F. Holderman, Grundy; 2nd, Bob Reese, Henry; 3rd, C. Cochonoco, Clark.

Team — Men (A Team): 1st, Tazewell; 2nd, Sangamon; 3rd, Champaign.

Team — Men (B Team): 1st, Henry; 2nd, Piatt; 3rd, Tazewell.

Husband and Wife: Mr. and Mrs. James Vinchell, Henry.

Junior: Bob Reese, Henry.

Old Timers: Art Hummel, Kendall.

Two-man Team: John Phillips and James Holderman, Grundy.

Women's Championship: Mrs. J. P. Vinchell, Henry.

All Around Trap — Skeet — Doubles: Marion Bartlow.

VOLLEY BALL

1st, Richard McHugh, Will; 2nd, Alfred Mangold, Mason; 3rd, Harold Toepke.

WOODCHOPPING

Individual — 1st, Turner Mayfield, Shelby; 2nd, Bob Stewart, Greene; 3rd, Granville Hodson, Adams.

WOMEN'S EVENTS

Chair Quoits — Junior: 1st, Mrs. Elmer Pocklington, Macoupin; 2nd, Leona Leonard, Vermilion; 3rd, Hazel Hart, DeKalb.

Chair Quoits — Senior: 1st, Mrs. Roscoe Smith, Kane; 2nd, Mrs. L. L. Love, Macoupin; 3rd, Mrs. Logan Hedrick, Champaign.

Clock Golf — Junior: 1st, Jean Stayton, Macoupin; 2nd, Mrs. Lawrence Nichols, Woodford; 3rd, Mrs. Roland Cox, McLean.

Clock Golf — Senior: 1st, Mrs. Ola Harshbarger, Piatt; 2nd, Mrs. Albert Anderson, Champaign; 3rd, Mrs. C. W. Homann, Edgar.

Clock Golf — Junior Doubles: DeKalb.

Clock Golf — Senior Doubles: Champaign.

Dart Throwing — Senior Individual: 1st, Mrs. Otto Harms, Macoupin; 2nd, Mrs. Eugene Caldwell, Tazewell; 3rd, Mrs. Mary Schaumburg, Iroquois.

Dart Throwing — Junior Individual: 1st, Mrs. John Howell, McLean; 2nd, Leona Leonard, Vermilion; 3rd, Mrs. Rex Mills, Champaign.

Dart Throwing — Senior Doubles: 1st, Kane; 2nd, DeKalb.

Knot Tying — Senior: 1st, Mrs. Wayne Heckman, Champaign; 2nd, Mrs. Roscoe Smith, Kane; 3rd, Mrs. Walter Brandt, McLean.

Knot Tying — Junior: Mary Hufflin, DeKalb.

Shuffle Board — Senior Individual: 1st, Mrs. Viola Beecue, Effnigham; 2nd, Mrs. Walter Brandt, McLean; 3rd, Mrs. Gerald Thomas, DeKalb.

Shuffle Board — Senior Doubles: 1st, Coles; 2nd, Effingham, 3rd, Kane.

Shuffle Board — Junior Individual: 1st, Harriet Reed, Kane; 2nd, Ruth Soper, Fulton; 3rd, Nora Wetherell, Effingham.

Table Tennis —

4-H — 1st, Charlotte Hanly, Greene; 2nd, Margie Groves, DeKalb; 3rd, Eldora Runge, McLean.

Open Class — 1st, Carol Dickerson, Ogle; 2nd, Mrs. H. F. Engelking, Champaign; 3rd, Virginia Guthrie, Moultrie.

Open Class — Doubles — 1st, Kane; 2nd, Ogle.

Senior women winners in the dart throwing, are left to right, Mrs. Otto Harms, Macoupin, first; Mrs. Eugene Caldwell, Tazewell, second; Mrs. Mary Schaumburg, Iroquois, third; Mrs. W. C. Picken, Champaign, fourth, and Mrs. Ola Harshbarger, Piatt, fifth.

Winners in the junior chair quoits singles, left to right, are Mrs. Elmer Pocklington, first, Macoupin, Leona Leonard, second, Vermilion, and senior, Mrs. Roscoe Smith, first, Kane; Mrs. L. L. Love, second, Macoupin, and Mrs. Logan Hedrick, third, Champaign.

Senior Chair quoits double winners, left to right, are: Mrs. Logan Hedrick, Mrs. Albert Anderson, both Champaign, second; Mrs. Roscoe R. Smith and Mrs. William J. Peplow, both Kane, first.

With the court of honor smiling their approval, IAA Director Otto Steffey, chairman of the Sports Festival, puckers up to kiss Queen of Sports Evelyn Koski, 28, of DeKalb county.

☆ ☆

Name First Queen of SPORTS

☆ ☆

MEET the Queen of Sports, pretty brunette Evelyn Koski of DeKalb, star fireball pitcher of the championship DeKalb women's softball team.

Evelyn was crowned Queen of Sports by Doug Mills, University of Illinois director of athletics, during the Friday afternoon ceremonies of the Sports Festival.

The crowning ceremonies were held in the University of Illinois football stadium.

Preceding the crowning ceremony Evelyn marched into the stadium leading the parade of championship winners. During the crowning Evelyn was flanked by her court of honor, composed of 13 women championship winners of Festival sports events.

Back in DeKalb Evelyn is not only a crack ball player and athlete, she also manages to crowd two other full time careers into a busy life.

She not only keeps house for her husband, a former captain in the air forces and veteran B-17 pilot of 51 missions, but also manages to find time to be secretary to the general manager of the DeKalb Agricultural Association.

Evelyn grew up and lived on a farm until her marriage two and one-half years ago. Her father, Harry Mosher of DeKalb, is a good Farm Bureau booster. He's been a member for 25 years! Evelyn and her husband joined Farm Bureau soon after they were married.

Evelyn has played an active part in the Rural Youth organization in DeKalb county. She was a member for about five years and at one time served as secretary of the DeKalb County Rural Youth.

She not only loves sports but she is Sports Festival minded too. For several years she has worked on the DeKalb County Sports Festival committee.

Evelyn is not the only member of her family that likes softball. Her brother, Bob Mosher, played on the all-county team at the state Sports Festival. A second brother, Jack, played on the second place DeKalb Rural Youth team.

Her sister, Dorothy, also appeared at the Sports Festival and was a member of the fifth place bowling team, placed first in shuffle board doubles and first in chair quoits doubles.

The DeKalb county girls softball team has gone to the state Sports Festival for six years and each year has come home with the championship.

Evelyn pitched on all of these six championship teams.

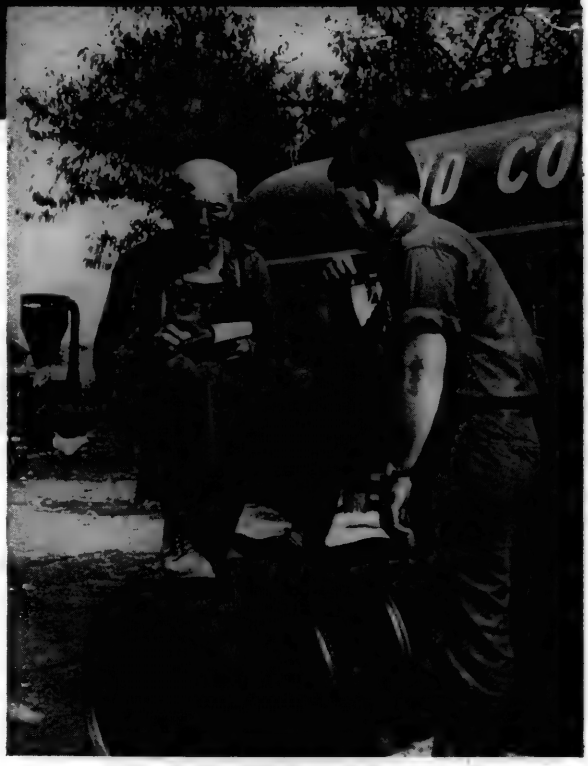
SAVE *the* FUTURE ORDER *way*

"Future Orders mean a great saving and a guarantee of good quality!" — says Fred Lurkins of Bond County.

Here's why farmers like the Future Order Plan—(1) They like the convenience of placing only one order and getting deliveries as they are needed. (2) They are assured of an adequate supply for the year's work. (3) No down payment. Payment can be made as deliveries are made. (4) They pay less because of a *special discount* for Future Orders.

Decide now, how much oil and grease you will need for next year's farm work. You can order other things at the same time too. Extra spark plugs and oil filters should always be on hand. Include them in your order. If you have never tried Blue Seal Anti-rust, you have a treat in store. Easily applied, it keeps your equipment free from rust until the next work season; a year's protection! Order some.



Fred Lurkins of Bond County, signs up for Future Motor Oil deliveries with Blue Seal trucksalesman George Morgan. This is the twelfth consecutive year that he has used the "Future Order" plan.

Order ILLINI PREMIUM MOTOR OIL

ILLINI PREMIUM MOTOR OIL

Illini Premium Motor Oil is our most popular oil. It makes up 60% of our total Motor Oil Sales to farmers. Illini is a new motor oil with 5 outstanding features of superiority; (1) keeps a clean motor clean longer; (2) provides a better piston-seal; (3) non-corrosive to bearing metals; (4) holds resinous varnish formation to minimum; (5) assured longer life for piston rings and cylinder walls.

BLUE SEAL GREASE GUNS
Handy and efficient. Include one with your order.

OIL FILTER CARTRIDGES
This new can-type replacement cartridge is well made and very efficient. Order a supply.

EDISON SPARK PLUGS
These plugs with the "spun-on" leakproof gasket give excellent service.

A word to the wise

IS NOT SUFFICIENT

It's a wise farmer who reminds his family and his help **often** to, "WATCH OUT FOR FIRE!" **A fire conscious** family is a careful family. But a really thoughtful farmer will take one more important step: He'll **insure** against fire **loss,** with a low-cost, **mutual** Country Mutual Fire policy. Then should his "ounce of prevention" fail, his friendly Country Mutual Fire agent will be there promptly with a "pound of cure".

Your Country Mutual Fire policy is a **mutual** policy with savings passed back to you from year to year — dividends on your constant efforts to avoid fire loss. So call in your friendly agent and let him help you work out a fire-prevention program that will really provide **protection.**

Knee High

By The 4th of July!

Here is agriculture's No. 1 crop — the bright-eyed, sun-tanned youngsters growing up on American farms. The corn may fail here and there, but so long as these kids are all "Knee high by the fourth", all is well for agriculture.

The efforts of your Farm Bureau are aimed at making ever richer the environment from which these youngsters take their strength — through better schools, better homes, better roads, better recreational facilities, better *opportunities* when each starts out on his own. For those of us with youngsters the aims of the Farm Bureau strike close to the heart.

GRAINS OF GOLD — HOW MANY IN A DOLLAR?

By President Charles B. Shuman

WE FARMERS, I am sure, would like to suggest that consumers the world over join with us in reverently giving thanks for a harvest that is in most respects more bountiful than we had dared anticipate. All possible grain will be saved for a world in dire need. It is indeed a harvest of golden grain in more ways than one.

Every farmer has felt the thrill and satisfaction of running his hands deep into a load of freshly harvested grain — grain which he has helped produce.

He thinks of the long hours of sweat and dust; he remembers the hopes and fears as he watched the western sky; he knows of what this grain is made. Let us think for a little about a bushel of our most important grain — corn.

The last 15 years have been marked by wonderful progress in the science and technique of corn production, yet the chemical composition of the grain itself is little changed. It consists of proteins, starch, oil and cellulose, combined in about the same proportions as in the corn produced in 1932.

A bushel of corn today will not produce much more meat or corn flakes than it did in that desperate year. In other words, the real value of a bushel of corn has not changed. The corn that we burned for fuel 15 years ago was just as good as that which we so carefully handle today. There is nothing wrong with corn or its value as measured in terms of human needs. The trouble lies in our measure of value — money.

The best doctor in the land would quickly give up if the temperature of his patient varied from day to day by as much as 10 degrees. An economy based upon a dollar which fluctuates in value to the extent witnessed during the past few years is "sick unto death." The real value of a dollar in 1932 was approximately 280 pounds of shelled corn; today the same dollar is worth only 22 pounds of corn.

As farmers look ahead and dream of a balanced economy and abundant production, they realize that this widely fluctuating value of the dollar is another heavy millstone holding us back. Your State and National organizations have for years urged that Congress take steps to actually "regulate the value thereof."

Perhaps we need a governmental agency operating within proper safeguards to at least partially stabilize the purchasing power of the dollar in somewhat the same way that we regulate weights and measures. How many grains of gold — how many grains of corn, if you please, in a dollar?

For The 33rd Annual Meeting Of The Illinois Agricultural Association and Its Associated Companies

WHAT does the future hold for Illinois farmers? What must they do to adjust themselves to the downward trend in prices most of us expect? Farmers attending the 33rd annual meeting of the Illinois Agricultural Association and Associated Companies probably will hear the answers to both these questions.

Besides hearing nationally famous speakers delve into some of the more pressing national problems of agriculture, farmers attending the St. Louis meeting will hear what the IAA is trying to do to solve local farm community issues.

Included among the topics for discussion at the IAA's first annual convention out of Chicago in seven years will be legislation, parity, food shipments overseas, fertilizer shortages, price supports, soil conservation, government economies, taxation of cooperatives, Farm Bureau membership, rural schools, rural roads, rural health, animal disease control, taxation, and many others.

Reports of progress by IAA departments and Associated Companies for the past year will be presented by department heads and company managers and plans for the IAA's coming year will be discussed in the president's annual report by Charles B. Shuman.

Half of the meetings will be held in the Jefferson Hotel with the others being scattered among the DeSoto, Mark Twain and Statler Hotels and Bishop Tuttle Auditorium.

General sessions, except the last one starting at 1 p.m., Thursday, will be held at the Kiel Auditorium. This includes the Tuesday evening program of general entertainment. The final general session will be held in the Jefferson Hotel.

A special invitation has been extended the Farm Bureau people of southern Illinois to attend the annual meeting this year since St. Louis is much nearer that section of the state than Chicago.

Southern Illinois Farm Bureau folks responded strongly to the invitation to attend the convention in St. Louis seven years ago when the IAA was celebrating its Silver Anniversary or 25th annual meeting. Southern Illinois attended the meeting in large numbers and made it the biggest IAA convention in history up to that time.

The convention is the occasion for the election of a president and vice president of the IAA and election of half of the membership of the IAA board of directors.

The annual meeting also will be the occasion for the finals of the state Rural Youth Talk Fest when a champion will be selected to represent Illinois in the national Talk Fest to be held at the American Farm Bureau Federation convention in Chicago in December.

Finals of the state Skilled Drivers' Club will be held during the

annual meeting.

Each morning at 6 o'clock during the convention IAA leaders will be interviewed on a farm program over Station KMOX featuring news of the annual meeting. Among the men scheduled to talk are President Shuman, George E. Metzger, secretary of organization and information; L. L. Colvis, secretary of marketing; I. E. Parett, secretary of general services; and Miss Pearl Barnes, president, Illinois Home Bureau Federation.

Farm Bureau people in St. Louis Sunday night, Nov. 16 are invited to attend a radio quiz show at KMOX at which four Farm Bureau people from Illinois and four from the Missouri Farm Bureau will be featured. The program is called "The Quiz of Two Cities" but in this case will be the battle of two states.

The program starts at 8 p.m. and all persons wishing to attend this radio program should write for tickets to Roy Johnson, Director of Special Services, Illinois Agricultural Association, 43 East Ohio, Chicago 5, Ill., or Station KMOX in St. Louis.

Radio Station WLS of Chicago also plans to make a broadcast from the St. Louis meeting.

Arrangements have been made to house a large influx of Farm Bureau people and although the housing situation has eased somewhat, visitors to the convention are advised to have housing accommodations reserved before going to St. Louis.

National Farm Show
Nov. 29-Dec. 7 Set For Chicago

ANOTHER major farm event has been added to the agricultural calendar for the week of Nov. 29 through Dec. 7 in Chicago.

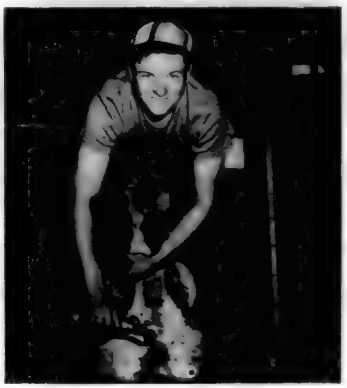
The new event is the National Farm Show to be held in the Chicago Coliseum, 1513 South Wabash Avenue. Theme of the show will be new and better ways of doing things on the farm. Special tickets at a reduced price of 40 cents each may be obtained at local county Farm Bureaus.

It is expected that all the new developments in farm machinery and other lines of the farm business will be represented at the show. In addition there will be 12,000 square feet of space devoted to 4-H club exhibits.

The Illinois Agricultural Association also will be represented by a booth among the educational exhibits of the National Farm Show. In addition to the exhibits the latest industrial movies will be shown during the afternoons and evenings to supplement two major shows to be given daily.

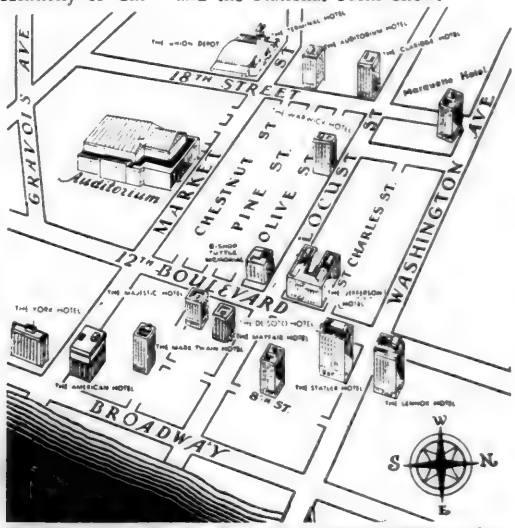
Included on the advisory committee of the National Farm Show are Charles B. Shuman, president of the Illinois Agricultural Association and Dean H. P. Rusk of the University of Illinois College of Agriculture.

Mayor Martin H. Kennelly of Chicago has proclaimed Nov. 29 through Dec. 7 as National Farm Week in Chicago. During that week Chicago will be agricultural center of the world with the national 4-H Club Congress, the International Live Stock Exposition and the National Farm Show.



Max Corzatt, 17, (above) with Conrad Taylor, 18, both of Warren county, will represent Illinois in the National 4-H shearing contest during the International Livestock Exposition in Chicago Dec. 2, 3, and 5. Corzatt was first in the Illinois State Fair contest. Taylor was second.

This is the Jefferson Hotel in St. Louis where half the sessions of the IAA annual meeting will be held Nov. 17-20.



This is a map of the St. Louis area showing buildings where sessions of the IAA meeting will be held Nov. 17-20.

OFFER PLAN TO IMPROVE SERVICE OF FARM BUREAU

IMPATIENCE with the government's sluggish attempts to coordinate the activities of agricultural agencies was expressed by President Charles B. Shuman of the Illinois Agricultural Association in Springfield Sept. 29.

President Shuman, with other IAA officials, discussed numerous Farm Bureau questions before a gathering of several hundred Farm Bureau presidents, farm advisers, and other Farm Bureau leaders, several of whom expressed their opinions from the floor.

Other matters discussed included rural school consolidation, taxation of cooperatives, conduct of County Farm Bureau annual meetings, associate membership in Farm Bureau, and organization of county committees on issues of statewide importance.

President Shuman expressed concern at the slow progress of the Soil Conservation Service, which he said has spent $275,000,000 in 12 years to reach only six per cent of the nation's farms.

He cited the four agencies now carrying on the soil conservation program and asked for more sensible coordination and less waste and duplication. It is confusing to farmers, he said, with so many federal employes trying to do the same thing. All four agencies are carrying on educational and demonstrational programs in soil conservation practices.

"If we are to avert national disaster," President Shuman said, "we must accelerate the program of soil conservation as provided under the Agricultural Coordination Bill of 1947."

The Agricultural Coordination Bill provides that the Soil Conservation Service become a division of the extension service; eliminates regional SCS offices; transfers research work of SCS to experiment stations; gives more authority to SCS districts; and provides that all educational and technical assistance on soil conservation be supplied through the extension service.

George E. Metzger, secretary of the IAA division of organization and information, called attention to abuses in the acquisition of associate membership and cited examples of associate members without thought to the welfare of agriculture evidently acquiring membership simply to obtain Farm Bureau privileges.

President Shuman commented that perhaps the associate membership situation requires drastic action in view of the findings presented by Secretary Metzger.

Pointing out the shortcomings of most county Farm Bureau annual meetings, Metzger asked for better planned programs. The program, he said, should be well organized so it never drags. Make business reports short and snappy and limit your speakers to one or two good ones.

President Shuman added that the annual meeting may be the only contact some members have with Farm Bureau so it should be good.

Taking up the question of consolidation of rural schools, John K. Cox, IAA director of rural school relations, said that there had been less "land-grabbing," of rural school areas by more aggressive neighbors since the people had become better informed on the practice of land grabbing and how it can be stopped.

(*Continued on page 7*)

TO IMPROVE the effectiveness of Farm Bureau service and give county leaders a better chance to mold opinion at both state and county levels, a plan of action was presented to Farm Bureau Leaders in Springfield by I. E. Parett, secretary of general services for the Illinois Agricultural Association.

The plan has the approval of the public relations committee of the IAA and the IAA board of directors.

Stated simply, it calls for the establishment in each county of four committees on 1. Organization-Information, 2. Marketing, 3. Public Relations, and 4. Business Service. These committees would work with similar groups at the state level.

Farm Bureau leaders have felt for some time that too much has been asked of the county Farm Bureau president. The burden on one man has prevented the county Farm Bureau from being as effective as it might be if the responsibility were shared with other county leaders.

Explaining the plan and its purposes, Parett said: "Problems arising at both county and state levels often require quick action by well-informed, trained leaders. This is particularly true in the field of legislation.

Following are the recommendations as presented by Secretary Parett:

A. Organization-Information — Committees of three men in each county, one of whom acts as chairman, are recommended. Further organization within the committee itself seems advisable because one man should be designated as an organization specialist, another on Publicity and Information matters, and a third on Rural Youth.

B. Marketing — Each county is asked to have a Marketing committee of five members, one of whom should be chairman. The five branches of marketing to be directed by this committee are Livestock, Grain, Dairy, Fruit and Vegetable, and Wool.

C. Public Relations — Considering the

department directors on duty in the General Service division, the committee recommends that County Public Relations Committees consist of five men. Each department director would closely cooperate with a different member of the county committee. Each of the five men would represent one of the following activities: 1. Taxation, 2. Schools, 3. Roads, 4. Safety and Health, and 5. Animal Disease Control.

D. Business Service — A committee of three men, appointed from the County Farm Bureau board of directors, should be given the responsibility of reviewing contractual relations between subsidiaries and affiliated companies. Matters involving auditing service, insurance, and feed distributorship are typical examples of problems which this committee might logically consider.

Committee chairmen are expected to: 1. Attend Illinois Agricultural Association district meetings. 2. Attend Illinois Agricultural Association Annual Meeting and be present at committee conference. 3. Attend Illinois Agricultural Association State Leader conferences, when requested.

4. Make a report of the activities of his committee to the County Farm Bureau board of directors who in turn may order the report presented at the Annual Meeting of the County Farm Bureau. 5. Submit any resolutions his committee would like to see adopted at the IAA Annual Meeting to his Farm Bureau secretary for presentation to the board of directors.

6. Contact IAA directors for help in local situations which his committee cannot solve if his local county Farm Bureau board approves such action. 7. Cooperate with his committee in their interviews with government officials.

8. Fill out and return annual report forms sent out by IAA. They are intended to show the scope of activity of each county committee. 9. Call his committee together at least four times each year to discuss problems existing at township, county, state, or national level. Any problems requiring IAA action or consideration should be reported to the IAA as promptly as possible.

The IAA will cooperate with county committees as follows: 1. Department directors will meet with committees when requested to do so by county Farm Bureau boards of directors through county committee chairmen, Farm Bureau presidents, or other delegated persons. He will work with the committee in the solution of a local problem. 2. Under similar circumstances, department directors will attend and speak at mass meetings in the county or district.

3. When County Farm Bureaus employ people to work on local projects, the IAA will, upon request of the County Farm Bureau and to the extent personnel is available, assist in directing their activities. 4. Publicity and news stories will be mailed to respective chairmen and to Farm Advisers for use in Farm Bureau publications.

5. Timely information will be carried in letters from the IAA department director direct to his county chairman. Farm Advisers will receive copies of the letters. 6. Meetings of an area nature may also be called by IAA directors for the purpose of informing chairmen.

7. IAA directors may arrange programs at District Meetings for the best interest of the county committee plan. A certain district may elect to have one section on tax and another on marketing. This can be accomplished by department directors working with chairmen in separate groups at the same hour. 8. Sectional conferences held in connection with the Illinois Agricultural Association Annual Meeting will feature programs for county committeemen. Proper recognition will be given county committees.

9. Illinois Agricultural Association State Leader Conferences will offer many legislative facts of current interest to county committees. 10. Illinois Agricultural Association will mail chairmen and Farm Advisers forms for listing committeemen by name, address, designation and telephone number; and annual forms intended to show the scope of activity of each county committee.

(*Continued from page 6*)

President Shuman urged sanity in school reorganization moves and expressed the hope that county School Survey Committees would finish their reports as soon as possible.

"Land grabbing," he said should be defeated by opposing all consolidation not approved by the county school committee. Think of your children first. And insist on farmer representation on your boards of education.

Turning to the problem of taxation of cooperatives, Donald Kirkpatrick, IAA counsel, said Congress intended to encourage farmer co-ops but developments "seem to point to the fact that some have gone further than intended." The IAA, Kirkpatrick said, would gladly join a move to avoid tax abuses in cooperatives.

"The position of your organization," Kirkpatrick continued, "can be defended anywhere."

The real intention of the "tax cooperatives" people, President Shuman added is to destroy cooperatives. The taxation they speak of is merely a smoke screen.

Practically all statewide cooperatives affiliated with the IAA are not income tax exempt, Shuman reiterated.

"Co-ops like these pay practically the same taxes as any other business. Patronage refunds are taxed when received by members," Shuman said. "Any other business could make the same arrangement with its customers and receive the same exemption."

THE Rutledge and Camron Saw and Grist Mill on the Sangamon river at New Salem State Park is the ninth of our series of cover pictures illustrating pictureseque and historic scenes. Lincoln lived at New Salem from 1831 to 1837.

In the fall of 1828 John M. Camron and his uncle, James Rutledge, settled on the ridge which later became the town of New Salem. Rutledge and Camron were millwrights by trade. They built houses for their families in the fall and the following spring began the construction of the dam and the mill. Pens were built of logs and weighted with rock and sunk in the river and then filled to the top with "1000 wagon loads of stone". The site was thoroughly excavated and the restoration is on the exact spot of the original.

All posts and timbers are in the identical location. Denton Offut leased the mill in 1831 and Lincoln aided in its operation for a few months. Camron sold the mill in 1832 or 1833 and the second mill was built in approximately the same location several years later.

URGE MERGER OF FEDERAL FARM AGENCIES

OFFER PLAN TO IMPROVE SERVICE OF FARM BUREAU

President T. J. Culbertson of the Effingham County Farm Bureau rises to ask a question during Farm Bureau leaders meeting in Springfield.

This is the Havana River Grain Company elevator shown in the last stages of completion during the first annual meeting of the organization in October. Meeting was held in tent at base of elevator.

Havana River Company *passes Milestone in* Cooperative Grain Marketing

WITH an impressive record for a year-old baby, the Havana River Grain Company marked its first anniversary in October full of confidence for the years ahead.

Credit for the success of the new river company at Havana goes to the farmers loyal to the Farm Bureau-type cooperative tradition and with firm faith in the company's eventual success.

An indication of this success is shown in the records of grain handled by the company since its organization to Oct. 1, 1947 — corn, 568,839 bu.; wheat, 486,921 bu.; soybeans, 54,319 bu.; oats, 38,906 bu.; rye, 102,629 bu. for a total of 1,251,614 bushels of grain.

Elevator Finished June 20

Much of this was handled by the old elevator, taken over by the new company, until the new 70,000 bushel elevator on the Illinois river bank was finished June 20, 1947.

For their cooperation and help in the organization of the Havana River Grain Company, President Howard Stone commended George E. Metzger, secretary of the IAA division of organization and information, and George H. Iftner, acting director of Illinois Grain Terminals Inc., with which the Havana company is affiliated.

Pointing to the massive elevator structure outside the tent where he gave the principal address, Metzger said: "I appreciate these fine structures and I know they will function well, but if they do not help raise the standard of living out on your farm, then I would say they are not worth while.

"You feel they are worth while. But you must go further. You must take fuller advantage of the corporate structure to carry on in scope as wide as your competition or you will get into difficulty.

"Now where do we go from here?" he asked. "You have a tremendous investment here. It calls for large terminal outlets. We must proceed to push that program now."

Outlines History

Iftner outlined the history of the Havana River Grain Company from the time it was first discussed in 1936 through the meetings in 1940 and in 1941 when the project was abandoned for lack of adequate financial support.

In 1944, Iftner continued, a meeting was held with representatives of the Illinois Agricultural Association, Illinois Grain Corporation, Indiana Grain Cooperative and surrounding County Farm Bureaus. At that time it was agreed that Indiana Grain would undertake to build a terminal elevator on the river at Decatur, Ala., when the Havana group was ready to erect a new elevator and equip it with barge-loading facilities. Organization of the Havana River Grain Company followed a few months later.

Manager Fred Watts Jr., addressed the annual meeting and reflected the confidence of the elevator membership in its future and asked for full support of Farm Bureau people.

Full Board Reelected

All members of the board of directors were reelected. They are: Howard Stone, president, Mason county; Andrew Larson, Mason; Leo Walters, McDonough; Alex Howe, Mason; Clarence Fulks, Fulton; W. Irving Brown, Menard; J. P. Armstrong, Cass and F. C. Sparks, Logan.

The Havana River Grain Company is one of the strong links in the chain of river houses being constructed along the Illinois and Mississippi rivers for coordinated terminal marketing operations under the direction of the Illinois Agricultural Association's Illinois Grain Terminals, Inc.

★

Standing before the gray walls of the Havana River Grain Company elevator are three who have done much to make the company a success. Left to right: George Metzger, IAA; Howard Stone, Havana company president; and George Iftner, IAA.

IT PAYS TO KEEP PULLET FLOCKS FOR *Tuberculosis* CONTROL

Afflicted with tuberculosis, these chickens are listless and have long toenails, two very evident symptoms of the disease. Internal organs are generally covered with whitish to yellowish spots.

By DR. DON VAN HOUWELING, Director
IAA Veterinary Medical Relations Department

"HOW long have you been keeping only pullet flocks, Mr. Rayburn?"

"This is the sixth year, Dr. Logan."

"Well, if we find any reactors in your flock I'll be surprised!"

Dr. W. C. Logan was referring to the tuberculosis test which they had just completed in the Rayburn laying flock. This was part of Dr. Logan's work in conjunction with a survey he is conducting in Illinois to determine the incidence of T.B. in chickens and swine for the Bureau of Animal Industry of the U. S. Department of Agriculture.

"Why do you say that Doc?"

"We hardly ever find T.B. infection in flocks where it has been the practice for several years to keep hens only through their first year of egg production."

"Do you mean that disposing of our old laying hens each year as our pullets begin to lay keeps T.B. out of our chickens?"

"The results of my work over the past eight years has certainly proved that without any doubt. Isn't that why you have been keeping only pullet flocks?"

Disease is Infectious

"No," Rayburn was thoughtful for a moment. "I started that after I read that it was more profitable to produce eggs if hens were kept only one year."

"That's true too, Mr. Rayburn, but we advocate the practice for the control of tuberculosis in chickens and in hogs."

"Gosh! Do hogs have T.B. too?"

"They surely do. One out of every 14 hogs killed in federally inspected packing houses last year showed evidence of T.B. The meat condemned as unfit for human consumption due to lesions of tuberculosis was valued at two million dollars last year!"

"What does T.B. in chickens have to do with that?"

"Most tuberculosis in hogs comes from chickens. If the chickens on the farm are diseased more than likely the hogs will pick up the infection. Then when the hogs are slaughtered they show T.B. lesions and meat is condemned."

"Well, I guess that's the packers loss and a joke on him, isn't it?"

It's More Profitable

"No, I'm sorry to say, the packers pass that loss onto you hog raisers. They know, from experience how much meat will be lost as unfit for food due to tuberculosis in the hogs they buy and make allowances for it in buying, just like they do for conformation and quality."

"Well, I'll be darned, Minnie and I sure didn't know we were keeping T.B. out of our chickens and hogs by keeping our layers only one year. We only knew we made more money that way. You know, Doc, I don't see why anybody keeps hens after their first laying year if they consider those things."

"We don't think anybody should, Mr. Rayburn, unless they have especially valuable blood lines in their flock they want to maintain. Of course, they can keep T.B. in check by testing their flocks, but that's too expensive for the average farm flock."

"Well, thanks a lot, Dr. Logan for the information, and I'll be seeing you Friday when you come to read the test on our chickens."

When Dr. Logan reads the tuberculosis test, which consists of injecting a drop or two of tuberculin into the wattle of a chicken, he also culls them for other diseases and laying. When he makes the test for T.B. in chickens he tries to get permission to test the hogs on the farm that are kept for breeding purposes. At the completion of the test the whole picture is discussed with the owners, and he explains to them the advantages of keeping only pullet flocks for laying purposes.

There are accurate statistical facts to confirm the above conversation between Dr. Logan and Mr. Rayburn. The U.S. Department of Agriculture in 1944 established that 19.4 per cent of laying birds died each year. A substantial portion of that death loss in the old hen flocks of the Corn Belt States is T.B. and the monetary loss would amount to millions each year.

Dr. Logan's own records prove that 57 per cent of the mixed flocks (young and old) tested were infected, and 6.9 per cent of the individual birds reacted to the T.B. test. Compare that with 14.1 per cent of the all-pullet flocks tested which are infected with .83 per cent of the individual birds reacting. When tuberculosis did occur in pullet flocks it was practically always on farms where pullet flocks had been maintained but a few years. These tests were made on more than 1,000 flocks and approximately 180,000 birds.

Birds Lose Weight

During one survey reacting swine were found on 12 farms where chickens did not have the infection, but in these cases Dr. Logan was able to trace the infection in the hogs back to the farm from which they had originated and demonstrate infected chickens on those farms.

Usually the first sign of the disease noticed is that a bird is "going light" as the poultry man says. This loss of weight is phenomenal in birds in which the disease is well advanced. Picking up one of these birds is like picking up

CHAMPION CONTOUR PLOWMAN

This is an IAA Cameraman's air view of plowmen in action during the state contour plowing contest near Sibley.

LLOYD SHAFER of Livingston county, a husky 28-year-old farmer and former navy pilot, won the first official state contour plowing contest held recently near Sibley in Ford county.

Shafer also won a special safety award for being the most careful plowman to enter the match, making him twice a champion in one day.

It was a profitable afternoon's work for Shafer. He won $100 as first prize money in the plowing contest and an extra $15 for the safety award. Living in nearby Chatsworth, Shafer traveled only 12 miles from his farm home to the contest grounds.

The plowing contest was directed by the state soil conservation board which designated the Ford County Farm Bureau as the host for this year.

It was a grueling 60 minute test of skill for the 13 plowmen entered in the contest. Eleven county winners and last year's state champion and runner-up competed.

Like the other contestants, all young men, Shafer said he has had plenty of experience straight-furrow plowing but little of plowing on the contour.

Shafer got started contouring two years ago after he came back from the navy and saw how much of the soil on his father's farm was slipping away.

The special safety award was presented to Shafer by W. W. Whitlock, director of safety for the Illinois Agricultural Association.

In making the award, Whitlock said that Shafer was, in general, a very careful driver. He kept an eye out for the milling crowd, slowed down around the ends, and had stripped his tractor free from danger hazards. Shafer said flying in the navy had made him safety conscious.

Farm Adviser Arnold Rowand of Ford county said this was the first official Illinois state contour plowing contest. Last year an unofficial contest, held at Gibson City, was won by Everett Erwin of Ford county. Plans for the future call for large field demonstrations of conservation practices during the contest, Rowand said.

The placings of the contestants, their county, and final score, were: 1st, Lloyd Shafer, Livingston, 87.5; 2nd, John Hood, Bureau, 83.5; 3rd, Willard Unzicker, Champaign, 82.5; 4th, Richard Green, Kankakee; 5th, Harold Zoller, Iroquois, 80.5; 6th, Wes Homan, Kankakee, 80.2; 7th, Leslie Gustafson, Marshall-Putnam, 78.5; 8th, Hillis Swanson, 78; 9th, Dan Arends, 77; 10th, Everett Erwin, Ford, 75.5; 11th, Charles Gleckler, Edgar, 74.1; 12th, Robert Jeffers, Shelby, 72.5.

Lloyd Shafer waves checks for $100 and $15 after winning the state contour plowing contest near Sibley.

Illinois 4-H'ers Win Over Iowa

THAT crack Hudson township 4-H softball team that won the state championship at the Sports Festival in Champaign can now add another star to its crown.

They whipped the Iowa champs in the 4-H club division during an interstate title game held recently at Bloomington. Hudson claimed a 7-6 victory over the Iowa nine, the Louisa County 4-H team from Wapello, Ia.

The title bout was played on the Farm Bureau field purchased by the McLean County Farm Bureau for 4-H activities. An estimated 500 spectators crowded the diamond to support the Hudson team.

Hudson trailed until the sixth inning but came from behind after a strong rally and held their lead over the Iowa team that had travelled 165 miles to play.

Bob Zimmerman's tricky delivery stopped the Iowans in their tracks until the fourth when Lee Richmond hit a homer with two men on base. Hudson scored a run in the last of the fourth and then scored six runs in the fifth.

The Louisa county team came back with three runs on two hits in the sixth but Zimmerman held them in the seventh and final inning.

Both squads and officials were given a dinner at the Farm Bureau building after the game with the Hudson Home Bureau serving the dinner.

BOX SCORE

The Farm Bureau POSITION

FARM Bureau's position on a long-range program for agriculture is relatively simple: refine and improve the program now in operation to meet changing conditions. Federation directors voted at their September meeting to stand pat on gains already made rather than junk the present program for an unknown, untried scheme.

As Senate and House agriculture committee complete their cross-country tours to hear first-hand from farmers and others, they are assembling a pile of valuable information to guide them in drafting and getting laws through Congress to aid American farming after the present Steagall price-support period ends Dec. 31, 1948.

AFBF VIEWS

Based on President Edward A. O'Neal's statement last April to the House Agriculture committee as hearings began on a new farm blueprint, here are AFBF's views on 20 important issues involved:

1. Maximum Production. The only way people can have more is to produce more. The only way to reach and maintain full production is through maintaining a fair relationship among farm prices, industrial prices and wages generally.

Industry and labor must join with agriculture in striving for an economy of abundance. Agriculture cannot continue a policy of full production unless similar policies are followed by industry and labor.

2. Strengthen Basic Laws. AFBF favors the principles and objectives of soil conservation; acreage adjustments and marketing quotas when needed; commodity loans, and surplus disposal as provided by basic agricultural legislation.

Gains which have accrued to farmers under basic laws such as AAA Acts, Soil Conservation and Domestic Allotment Act, Bankhead Commodity Loan Act, Steagall Price Support Act, and others dating from the early 1930's, must be preserved. It is equally important that these laws be improved and strengthened.

MODERNIZE PARITY

3. Commodity Credit Corporation. Keep CCC as a permanent agency to carry out price support and commodity loan program.

4. Parity Formula. Retain the parity principle. Maintain the present formula for the rest of the Steagall period, except for needed adjustments in livestock and dairy products. Modernize the formula at the end of the Steagall price-support period.

5. Price Supports. The Government must carry out its committments under the Steagall price support plan. American Farm Bureau Federation is studying adjustments that may be needed at the end of the Steagall period.

6. Surplus Control. Acreage allotments and marketing quotas should be used when necessary to control and adjust supplies to total market demands.

7. Act of 1937. The Marketing Agreements Act of 1937 should be strengthened and extended to agricultural commodities not now included.

8. Section 32 Funds. These funds should remain available until expended for disposal and surpluses and development of new uses for surplus farm products.

(*Note: Under Section 32 of the 1935 AAA Act, 30 per cent of the government's custom receipts are earmarked by the U.S. Department of Agriculture to encourage exportation and domestic consumption of surplus agricultural products and to re-establish farmers' purchasing power.—Ed.*).

9. Expanding Consumption. We also favor sound programs for developing new uses and new markets for agricultural commodities; and intensified educational program toward improved nutrition, and a wisely-planned school lunch program.

WORLD TRADE

10. World Trade. Both agriculture and industry need an expanded volume of world trade. Study should be given to the problem of stabilizing prices of the major farm commodities in world trade and to the use of surpluses to relieve malnutrition and human suffering.

11. International Commodity Agreements. Such agreements can be used to stabilize world prices and increase export outlets.

12. Recriprocal Trade Agreements. These should be used to reduce trade barriers. However, equitable treatment must be given agricultural products.

The Farm Bureau POSITION

FARM Bureau's position on a long-range program for agriculture is relatively simple: refine and improve the program now in operation to meet changing conditions. Federation directors voted at their September meeting to stand pat on gains already made rather than junk the present program for an unknown, untried scheme.

As Senate and House agriculture committee complete their cross-country tours to hear ffrst-hand from farmers and others, they are assembling a pile of valuable information to guide them in drafting and getting laws through Congress to aid American farming after the present Steagall price-support period ends Dec. 31, 1948.

AFBF VIEWS

Based on President Edward A. O'Neal's statement last April to the House Agriculture committee as hearings began on a new farm blueprint, here are AFBF's views on 20 important issues involved:

1. Maximum Production. The only way people can have more is to produce more. The only way to reach and maintain full production is through maintaining a fair relationship among farm prices, industrial prices and wages generally.

Industry and labor must join with agriculture in striving for an economy of abundance. Agriculture cannot continue a policy of full production unless similar policies are followed by industry and labor.

2. Strengthen Basic Laws. AFBF favors the principles and objectives of soil conservation; acreage adjustments and marketing quotas when needed; commodity loans, and surplus disposal as provided by basic agricultural legislation.

Gains which have accrued to farmers under basic laws such as AAA Acts, Soil Conservation and Domestic Allotment Act, Bankhead Commodity Loan Act, Steagall Price Support Act, and others dating from the early 1930's, must be preserved. It is equally important that these laws be improved and strengthened.

MODERNIZE PARITY

3. Commodity Credit Corporation. Keep CCC as a permanent agency to carry out price support and commodity loan program.

4. Parity Formula. Retain the parity principle. Maintain the present formula for the rest of the Steagall period, except for needed adjustments in livestock and dairy products. Modernize the formula at the end of the Steagall price-support period.

5. Price Supports. The Government must carry out its committments under the Steagall price support plan. American Farm Bureau Federation is studying adjustments that may be needed at the end of the Steagall period.

6. Surplus Control. Acreage allotments and marketing quotas should be used when necessary to control and adjust supplies to total market demands.

7. Act of 1937. The Marketing Agreements Act of 1937 should be strengthened and extended to agricultural commodities not now included.

8. Section 52 Funds. These funds should remain available until expended for disposal and surpluses and development of new uses for surplus farm products.

(*Note: Under Section 32 of the 1935 AAA Act, 30 per cent of the government's custom receipts are earmarked by the U.S. Department of Agriculture to encourage exportation and domestic consumption of surplus agricultural products and to re-establish farmers' purchasing power.—Ed.*).

9. Expanding Consumption. We also favor sound programs for developing new uses and new markets for agricultural commodities; and intensified educational program toward improved nutrition, and a wisely-planned school lunch program.

WORLD TRADE

10. World Trade. Both agriculture and industry need an expanded volume of world trade. Study should be given to the problem of stabilizing prices of the major farm commodities in world trade and to the use of surpluses to relieve malnutrition and human suffering.

11. International Commodity Agreements. Such agreements can be used to stabilize world prices and increase export outlets.

12. Recriprocal Trade Agreements. These should be used to reduce trade barriers. However, equitable treatment must be given agricultural products.

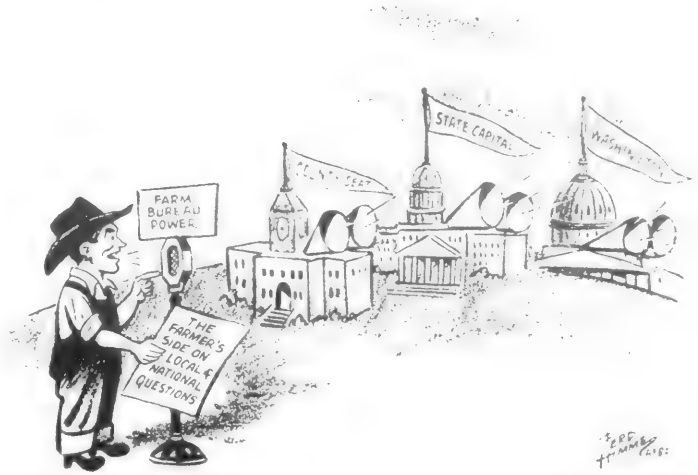
YOUR VOICE IS AMPLIFIED A MILLION TIMES !



IAA President Charles B. Shuman (left) receives farm safety award for an editorial he wrote in the IAA RECORD. Making award is Maynard Coe, farm safety director of the National Safety Council. Right is W. W. Whitlock, IAA safety director.

SHUMAN EDITORIAL

Wins

NATIONAL HONORS

THE RECORD, Illinois Agricultural Association official publication, has received an award of honor for submitting the best editorial on farm safety entered in a national farm magazine contest sponsored by the National Safety Council.

The winning editorial was written by President Charles B. Shuman in the July-August issue of the IAA RECORD and was entitled *Safety Islands in the Country.*

Leading state and national farm magazines competed in the contest conducted by the National Safety Council, a non-profit organization supported by leading insurance companies, including Country Life Insurance Company.

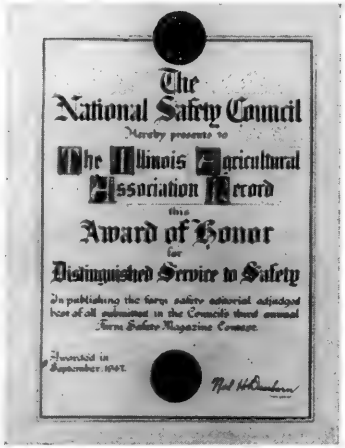
In his editorial President Shuman contrasts the false sense of security on a farm with the obvious dangers of city traffic and concludes that the farm is not a haven of safety.

The award was presented to President Shuman by Maynard H. Coe, director, farm division of the National Safety Council.

In granting the award the judges said the editorial was "short and concise with an appropriate title, gripping with the use of examples, an editorial in the true sense."

The RECORD was one of seven magazines to win one of the National Safety Council's awards of honor for distinguished service to farm safety.

Better Farming Methods, The Southern Planter, and *The Wisconsin Agriculturist and Farmer,* were picked for the national, regional and state magazine winners, respectively, for their work in promoting farm safety week held this year during July 20-26.



The National Safety Council
Hereby presents to
The Illinois Agricultural Association Record
this
Award of Honor
for
Distinguished Service to Safety
In publishing the farm safety editorial adjudged best of all submitted in the Council's third annual Farm Safety Magazine Contest.
Awarded in September, 1947.

Above is a reproduction of the scroll awarded to the Illinois Agricultural Association Record in the National Safety Council's farm safety contest.

The Farm Journal won first honors in the photograph division with a picture of five farmers who had lost arms or fingers in accidents.

Successful Farming won first for the best original feature story on farm accidents told by the magazine by the use of pictures. *The Illinois Granger* won honors for the best farm safety cover.

The judges were Harold Swanson, assistant editor, college of agriculture, St. Paul; Walter John, director of information, USDA Production and Marketing Administration; and Maynard H. Coe of the National Safety Council.

"Special commendation goes to the efforts being made by the smaller magazines for their participation which, in spite of the paper shortage and other handicaps, are giving vigorous and intelligent support to farm accident prevention."

This is the first year the IAA RECORD has entered the contest and is also the first year that the best cover, best photograph, best original feature, and best editorial divisions of the contest have been offered.

FARM YOUTH IN CHICAGO INVITED TO VISIT IAA

FARM BUREAU and the Illinois Agricultural Association seldom look with favor on the migration of young people from rural areas to large cities.

The IAA realizes, however, that many are determined to try life in nearby cities like Chicago. It is with this thought in mind that we invite young farm people arriving in Chicago to visit the personnel department of the Illinois Agricultural Association. Perhaps there is an opportunity to suit you in your own farm organization.

If you can find a job with us, your farm background will be of great value to you. It will be of value to the IAA. We do not wish to lure youngsters away from the farm but invite those to see us who are planning to come to Chicago.

The Association offers a wide variety of clerical jobs — general office work, typing, stenography, bookkeeping, and office machines. The new office building provides a modern office environment. Salaries are based on prevailing area rates and promotions are made from within.

The housing situation remains serious and anyone moving to Chicago should make certain of living accommodations.

If you plan to move to Chicago and will be looking for work, write to the personnel department. In your letter you might mention what kind of job you feel qualified for, and also when you expect to be available for work.

CORN DRYER INSURANCE

When a corn dryer is used in connection with a farm building, a permit for such use must be attached to the fire insurance policy covering such building and its contents if insurance protection is to remain in force.

Farmers who contemplate the use of a corn dryer should see their fire insurance representative and make arrangements for a permit.

The permit will be issued for periods of 90 days, as desired, for a charge as provided by the official rate making organization in Illinois.

The dryer itself will not be protected unless it is specifically insured. The amounts of coverage on the building, contents, or the dryer during the period of operation may, if the insured desires, be for lesser amounts than that carried in the regular policy.

SHORTS IN THE NEWS

G. W. BUNTING has resigned as research director for the Illinois Farm Supply Company to become manager of the Central Farmers' Fertilizers Company, and organization of wholesale agricultural cooperatives serving mid-western states.

Bunting joined the staff of the Illinois Farm Supply Company in 1931 and has been its oldest staff member in point of service working for the company for nearly 17 years.

Leonard L. Fuchs has been hired as farm adviser for Pike county, succeeding W. B. Bunn who transferred to Champiagn county in April. Fuchs graduated from the University of Illinois in 1942 then served in the army.

C. L. Banner replaces D. E. Warren as farm adviser in Ogle county. Banner has taught vocational agriculture for the last 12 years, graduating from the University of Illinois in 1932.

R. H. Roll has resigned as farm adviser in Greene county but will remain in Carrollton to teach G. I. classes and operate a feed, seed, and fertilizer business. Roll came to Greene in 1942 after having worked in Gallatin county as farm adviser since 1935. Before this he taught vocational agriculture at Eldorado. He was graduated from the University of Illinois in 1922.

F. B. Hoppin is the new farm adviser in Hamilton county. He succeeds Glen F. Sons.

HERE'S CHANCE TO WIN MONEY

HERE'S your chance to win prizes of $15, $10, $5, $3, $2, or $1 cash awards for first through sixth place winners in the safety jingle contest.

Read over the captions under the Uncle Henry cartoons and complete the last two lines under the final cartoon. Sample completion is as follows for this line:

"Make friendliness and courtesy
"Always your aim."

Send in the last two lines you have completed, together with your name, address, and Farm Bureau to which you belong (state in whose name Farm Bureau membership is held), to —

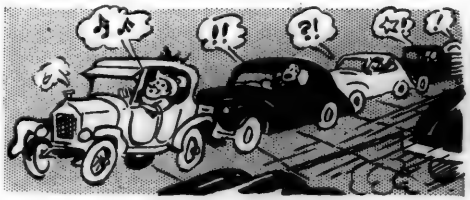
Department of Safety and Public Health
Illinois Agricultural Association
43 E. Ohio Street, Chicago 11, Illinois

Contest is open to Farm Bureau members and their families. Entries must be postmarked by at least December 1, 1947. All entries become the property of the judges whose decisions will be final. Results will be published in the January, 1948 edition of the IAA RECORD.

Remember the dead line is December 1. So send your entries in right away.

**In following these rules
Most wrecks we'll avert:**

1. Make all the stops, Then no one'll get hurt;



2. Drive at a speed, Both reasonable and sane;

3. Keep eyes on the road, Not on crops up the lane;

4. With good brakes and equipment, Few you will maim;

5. . . . . .

HEAVYWEIGHTS

TOP MARKET AT

MACON CO-OP

This is one of the 64 finely-formed barrows which averaged a profitable $25 per cwt., when sold through the Illinois Livestock Marketing Association by Dean Samuels of DeWitt county.

HERE'S a hog story to top the best fish story you've heard this season. And Dean Samuels of De Witt county can prove it's true.

Samuels breeds good hogs and he often sells them when they weigh heavy. But not like the 500 pound whoppers pictured here.

The day of the big hog has passed but here is a case where a shrewd hogman made money, and lots of it, holding his heavies off the market and putting even more gain on them.

He first offered these Chester White barrows for sale around the first of September to the Macon County Marketing Association. They offered him $20 a hundred, top figure for the day's market on heavy hogs.

Samuels said he guessed he would wait a while. He was sure heavy hogs would advance sharply. His hunch paid off. He went back two weeks later. The local co-op yards offered him a $25 bid on Sept. 17.

Samuels delivered the hogs. He made $1592.50 by waiting just two weeks. And he took home a check for $7962.50 for only 64 hogs, the price 10 years ago of a good 80-acre farm.

The hog shipment was made up of 64 uniform Chester White barrows, weighing a total of 21,850 pounds or an average of 497.6 pounds. They were purchased by Wilson & Company and dressed out well in the packing plant.

Samuels lives near Clinton and is a good Farm Bureau member in DeWitt county.

International WILL USHER IN WINTER SHOW SEASON

AMERICA'S largest live stock show, the International Live Stock Exposition and Horse Show, will celebrate its 48th anniversary Nov. 29 through Dec. 6.

It will be held in the International Amphitheatre at the Chicago Stock Yards.

This huge exposition annually attracts a showing of between 12,000 and 14,000 animals, the finest specimens of the meat-making breeds of live stock, from all parts of the United States and Canada.

An attendance in excess of 400,000 is anticipated this year, officials of the show report.

Chief entertainment feature of the Exposition are the famous International Horse Shows, which will take place daily through the 8-day run of the show.

The 25th anniversary of the International Grain and Hay Show will take place this year in connection with the live stock exposition. It is the largest competitive farm crops competition in the world.

The 26th annual 4-H Club Congress will be held in Chicago coincident with the International.

The opening week-end will feature Junior activities at the International. The Junior Live Stock Judging contest will take place as a pre-opening event on Friday, Nov. 28; and the Junior Live Stock Feeding Contest, in which boys and girls will show beeves, lambs, and hogs of their own raising, will be on all day Saturday, Nov. 29. Both of these contests are open to 4-H and vocational agricultural club members. The Collegiate Live Stock Judging contest will also be held on Saturday, Nov. 29.

The open steer classes will be judged on Monday and Tuesday, Dec. 1 and 2, of the International week, and selection of the grand champion steer — high-light winner of the week — is set for 2 p.m., Tuesday, Dec. 2.

All of the steer classes at this year's Exposition will be judged by Richard S. deQuincey, a noted Hereford and Shorthorn breeder of Bodenham, Hereford, England.

Admiring Dean Samuels' consignment of barrows marketed through the Illinois Livestock Marketing Association are, left to right: Gene Kerr, manager, Scott County Marketing Association, Bluffs; Ed Ashton, manager, Macon County Marketing Association, Decatur; and Dorsey Hendricks, yard man at the Decatur yards.

Listen Friend..

I am not big hearted understand, but I am human. This Farmer's General and Employers Liability policy I have lets me "kill two birds with one stone." Anytime my hired man is injured I am protected against any liability that is imposed upon me by law because of his injury. Another thing is that no matter how my hired man is injured as long as it happens while he is helping me farm he has medical and hospital expense coverage. See what I mean — both of us are given consideration under the same policy. My hired man appreciates this as much as I do.

COUNTRY MUTUAL CASUALTY COMPANY

During a disking operation on one of his fields, Director Bunting stops for a moment to chat with his only son, Kemp, 14.

DIRECTOR BUNTING FEEDS SOIL FOR HIGHER YIELDS

By JIM THOMSON
Ass't. Editor, IAA Record

Editor's Note: This is the 10th of a series of articles to acquaint you with the men who represent you on the Illinois Agricultural Association board of directors.

* * *

IT HASN'T been easy farming the exhausted lands of southern Illinois during the past 20 to 30 years. Just ask the man who farms some.

But a new day is breaking, thanks to the pioneer work done by some outstanding Farm Bureau men. They have the foresight to see that the future of the land, more than in any other section of Illinois, depends on wise soil conservation practices, rotation, and generous application of necessary plant foods. Lyman Bunting, member of the Illinois Agricultural Association board of directors from the 24th congressional district, is one of these men.

A charter member of the Edwards County Farm Bureau, Bunting has been on the board since 1940 and represents the following counties: Clay, Wayne, Edwards, Hamilton, White, Saline, Gallatin, Johnson, Pope, Hardin, and Massac.

Bunting is of slender build and has a smile for just about everyone he meets. After farming in southern Illinois most of his life, he has a touch of the fatalist in his makeup. Director Bunting takes the attitude that misfortune is just part of the farmer's lot and he might just as well take it in stride.

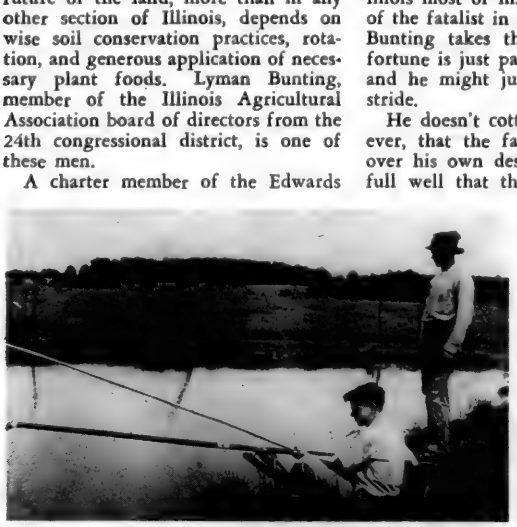
He doesn't cotton to the idea, however, that the farmer has no control over his own destiny. For he knows full well that the best farmer is the man who takes advantage of the best scientific knowledge available.

Does he? See for yourself. Generous applications of nitrogen, potash, and phosphate have doubled his corn yields — from 50 to 120 bushels per acre in one field. That's a pretty good yield for any part of Illinois.

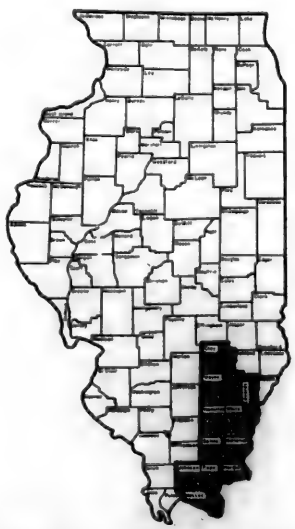
Bunting was born and reared on the farm he now operates. It is owned by his father, a descendant of pioneers who came to the state more than 100 years ago.

He taught school for two years before going into farming. At that time he had the youthful high spirits which told him that something could be done with the land to make it more productive. Some of the land at that time yielded as little as five bushels of wheat to the acre.

Eighty acres of Bunting farm lie in Edwards county and 160 acres in Wayne county. Acreage in corn each year averages about 35 acres; in oats 25 acres; and in wheat, 20 acres. The rest is in hay and pastures. His rotation generally follows this pattern: corn, oats or wheat and hay or pasture. From the timber on the farm, 160,000 board feet of lumber has been taken



IAA Director Bunting has a good-sized pond on his farm generally well-stocked with fish. He is shown with son Kemp, 14, angling for a bite.



Shaded area on map is 24th congressional district represented on the Illinois Agricultural Association board of directors by Lyman Bunting of Ellery.

Bunting has a great deal of interest in latest farm developments and keeps up-to-date by reading a wide variety of agricultural periodicals.

during the past 18 years. Fifty acres of the Bunting farm is terraced.

Since starting farming, he has tried many methods in an effort to get the best return from the land. He has 98 head of purebred Shropshire sheep, 35 head of purebred Hereford cows and calves and 500 hens. He has had no hogs since he switched to sheep 21 years ago. The farm lies in a natural bowl. Water, therefore, and its drainage offers considerable difficulty in the spring. It is not uncommon for water to cover the fields to a depth of two feet.

Director Bunting is married to the former Della Rigg of Wayne county. They are the parents of two children, Kemp, 14 and Shirley, 12.

He served 13 years as president, two years as secretary, and three years as a director of the Edwards County Farm Bureau. He is now in his ninth year as a director of his local school board and is chairman of his county school survey committee. Connected with his county fire insurance company since the early 20's, he is now serving as treasurer of the organization.

Bunting has been secretary of the Edwards County Shipping Association since 1921 and is a member of the Albion, Illinois Rotary Club.

"For a more prosperous agriculture," Bunting says, "we must avoid depleting the soil. That means we must help the poor farmer make a better living. We need a practical soils program to help poor people on poor land. Such a program must be found and advanced by Farm Bureau and the University of Illinois Extension Service working together."

One of Bunting's favorite pastimes is hunting with his own coon dogs. He is down talking to one of his dogs while relaxing in the back yard.

Rural Youth

By

ELLSWORTH D. LYON

HENRY'S progressive hayride party starting at Cambridge and consisting of a movie and games at Ray Johnson's, a wiener roast with all the trimmings at a nearby timber, and watermelon at Ray's was topped off by an enthusiastic expression for participation in the Skilled Drivers' Club.

OGLE'S recent community service in teaching and leading an evening of square dancing for the Mt. Morris city grade schools PTA was rewarded by a gift of a square dance record album by the PTA. Representatives returning from the State Camp dramatized their reports covering the various classes which the delegates attended. The Forreston Group of this county decorated a float for the Forreston Sauerkraut Day and won first prize to increase the group's treasury.

Virginia Taylor, retiring President of VERMILION, has recently become Mrs. Virginia Taylor Wallen. The new president is Stanley Inglesbe.

DEKALB scheduled a fall banquet, the event being Oct. 25. Fall banquets might be worth considering as a means of starting the year's program.

WASHINGTON County Rural Youthers now boast having more than $1,000 in their treasury, $725 of this amount being made at their food stand at the County Fair. They know how to spend their money too. They sponsored a trip on the Admiral this year with 78 members having a gala time. They sent a softball team to the Sports Festival, two delegates to the Midwest AFBF meeting, three delegates to the Rural Youth Camp, a number of delegates to the IAA convention with plans for a delegation for St. Louis, have had the largest delegation for Farm and Home Week for the last two years, and are now sponsoring a girls bowling team which stands first out of eight teams in the county league. A male quartette is becoming quite popular with its many appearances in public and over the air. This group considers the Talk Fest a most important project and have had representatives at the State Talk Fest.

MARSHALL-PUTNAM is sponsoring a full evening of entertainment. One act plays and musical numbers will be the feature of the evening. The purpose of this entertainment, according to Don Condit, president, will be not to raise money but to provide an opportunity for the young people to participate in dramatics.

LOGAN'S square dance orchestra, caller and dancers, are now working to advance from the B rating received this year at the State Sports Festival to the top rating for next year.

Frank W. Turnbull, PIKE president, reports that his helper, Vice-President Alfred Long, was married in August to Tilda Commire, a member of the group.

PEORIA'S plans for occasional skating parties and barn dances for fun and money are receiving hearty support through attendance, according to a report received from Rus Scheeler, president.

Erwin L. Duzan writes that EDGAR spearheaded the fall program of activities with the County Talk Fest. Plans are under way for a formal dance to be held during the Christmas holidays.

MACOUPIN is striving to spread the story of Rural Youth, and to increase membership among farm boys and girls for their 1948 program. Evelyn Love is the new president.

CLARK is giving special consideration to methods of increasing attendance.

Jo Ann Wingo gives a good report of the cooperation and friendly spirit in the FRANKLIN group. Congratulations, keep going.

Pictures show two of the activities at the state Rural Youth camp held in September at East Bay Camp near Bloomington. Interpretive dancers (left) are, l. to r., Janis Larson, Marjorie Wadsworth, June Frazier, and Gertrude Sievers, all of Rock Island; Janet and Alice Jacobsen, of Bureau; and Dorothy Magerkurth of Rock Island. Right: A volley ball game is in progress.

Karen Henke of Madison county finds her uncle's shoes take quite a bit to fill. Filling big shoes is one of her favorite pastimes.

SAVE FEED GRAINS

USE AMPLE PROTEIN IN THE RATION

KEEP HERDS AND FLOCKS HEALTHY

USE PLENTY OF GOOD EQUIPMENT

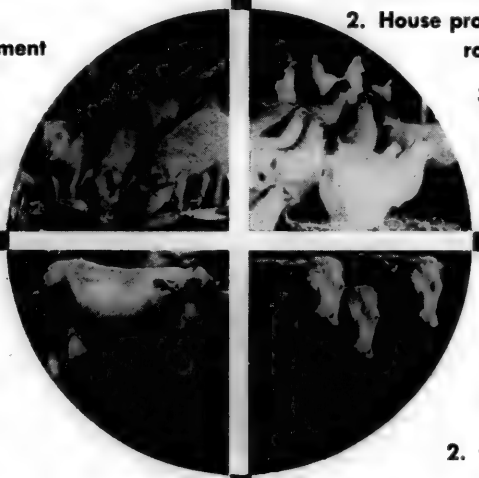
CONTROL RODENT DAMAGE

SWINE

1. Feed sow & young pigs *EXTRA* WELL.
2. Feed protein supplement to save grains.
3. Protect swine health through sanitation.

POULTRY

1. Provide plenty of proteins, vitamins and minerals with poultry supplements.
2. House properly — more ventilation, roosts and nests.
3. Keep flocks culled closely.
4. Keep flocks predominently pullets.



DAIRY

1. Utilize roughage fully.
2. Balance roughage and grains with ample proteins.
3. Market the low producers.

BEEF

1. Shorten the grain feeding period.
2. Get the most use out of silage and hay.
3. Balance roughage and grain with proteins.

Blue Seal Feed Supplements Are Grain Savers!

Chicago 5, Illinois

IAA Host To COUNTY LEADERS

COUNTY Farm Bureau presidents and farm advisers met last month with officials, department heads and company managers of the Illinois Agricultural Association in a series of two-day program conferences.

The meetings were held to better acquaint county leaders with the programs and policies of the IAA and its associated companies.

The first of these conferences covering counties in the Southern organization district was held Sept. 22-23; the second, for the Northwest district Sept. 25-26; the third, for the Northeast district, Oct. 6-7.

Preceding the meetings, the delegates were conducted through the new IAA office building at 43 E. Ohio in Chicago by members of the IAA staff.

Watching intently while Bob Parke (center) runs off Country Life Premium notices on intricate tabulating machine are, L. to R.: G. A. Trull, ass't farm adviser, LaSalle; C. J. Elliott, IAA director, LaSalle; E. T. Culman, IAA director, Logan; M. L. Jones, president, Lawrence Co. Farm Bureau; H. Seedorf, president, Kankakee Co. Farm Bureau; H. L. Flesburg, president, LaSalle Co. Farm Bureau; F. A. Painter, farm adviser, LaSalle; and L. D. Graham, farm adviser, Kankakee.

After the tour and luncheon President Charles B. Shuman presided over the meetings and talked briefly on the IAA's stand on national issues and the legislative program of the AFBF.

Referring briefly to the AAA program for 1947, Shuman said that the appropriation of $150,000,000 plus administrative expenses which finally passed Congress would have been killed in the House if the AFBF had not pushed it through.

Without these funds, Shuman said, local AAA offices would be forced to close.

Turning from legislative matters, Shuman said that while Illinois has not followed the lead of other states in setting up a department for each commodity group, the IAA is in sympathy with the commodity program of the AFBF.

He indicated that it might be advisable for certain counties to set up commodity committees in areas where contract crops are grown if for no other reason than to discuss contracts.

He also said that there is a demand from the AFBF to raise their membership dues which are now 50 cents annually.

And while the IAA is contemplating no increase in its own membership dues, Shuman said he could understand the AFBF's need for increased revenue.

The IAA is also caught in the tide of rising costs and is operating under a close budget which will probably exceed $600,000 this year.

Delegates from Northwestern Illinois take part in the informal talks that followed luncheon held in Morrison Hotel.

Watching girls at work in IAA insurance office are, L. to R.: T. W. May, farm adviser, Madison; C. S. Love, farm adviser, Christian; B. W. Tillman, farm adviser, St. Clair; M. E. Deal, president, Christian; O. W. Helms, president, St. Clair; F. Knight, Youth Ass't., Vermilion; G. Gordon, Youth Ass't., Christian; A. Rister, president, Gallatin; C. Best, Youth Ass't., St. Clair; O. G. Pape, president, Madison; E. M. Lutz, farm adviser, Gallatin; an unidentified man; J. E. McCue, farm adviser, Edwards; O. W. Hertz, farm adviser, Vermilion; E. S. Amrine, farm adviser, Monroe.

HERE IS FARM BUREAU POSITION

(*Continued from page* 11)

13. **Research.** Studies should be intensified to improve methods and cut costs of production, marketing and distribution and to expand consumption of agricultural products at home and abroad. The full amounts authorized under the 1946 Research & Marketing Act should be appropriated.

FARM PROGRAMS

14. **Administration of Farm Programs.** Improvement is badly needed. At present there is too much duplication, overlapping and conflict in them.

15. **Coordination of Conservation Programs.** Educational, informational and technical assistance to farmers in connection with all conservation programs should be coordinated through the Extension Service. Research assistance should be coordinated through State Experiment Stations. The AAA conservation practices are eligible for payments under existing laws.

16. **Soil Fertility Program.** Establish a National soil fertility policy and program. Construct a pilot plant to produce concentrated phosphatic fertilizers by a new process at Mobile, Ala.

FARM CREDIT

17. **Farm Credit.** The cooperative Farm Credit system should be made truly cooperative, farmer-owned and farmer-controlled. All farm credit agencies should be coordinated under an independent, bi-partisan board.

18. **Rural Electrification.** The extension of electric power to farmers should be continued.

19. **Cooperatives.** The Government should continue to support fully the policy of protecting and encouraging farmer co-ops which meet standards of the Capper-Volstead Act.

These Mercer County Farm Bureau folk who made the tour to the AFBF convention in San Francisco last year, are shown as they got together in June for a picnic dinner reunion at the home of Mr. and Mrs. H. M. Ramsey of 10 miles northwest of Aledo.

20. **Crop Insurance.** This insurance should be continued provided rates are maintained on a sound, acturial basis. Further study and experience are needed before the insurance is extended generally to all areas of the country.

Keep Tuberculosis Off Your Farm

(*Continued from page* 9)

a piece of metal expecting it to be lead or iron and finding it to be aluminum. The comb is usually pale and there is very little flesh on the breast. These birds will continue to eat well until they die and usually deaths occur singly or in small groups over a considerable period.

Post mortem examination of the internal organs of an infected chicken will generally show many white to yellow spots or nodules known as tubercles. The organs most often involved are the liver, spleen, and the intestines.

Humans aren't likely to get tuberculosis from chickens, but chickens may die from the type that affects humans. It is spread to other chickens by contact with sick birds. Crowding and poor sanitation increase greatly the rate of spread.

Remember! Keep laying hens only through their first year of egg laying and you make more money by increased production, by decreased death loss, and you keep tuberculosis from infecting your chickens and hogs.

R. S. McBRIDE IS NAMED MANAGER OF FRUIT EXCHANGE

R. S. McBRIDE, 36, has been named manager of the Illinois Fruit Growers Exchange following the resignation of Ted L. Davis.

McBride has been the company's sales manager since June of 1946. He has been in fruit sales work all of his working life and is experienced in selling fruits and vegetables in truck and carlot.

R. S. McBride

McBride who comes from Texas has been working for the Exchange under a unique arrangement where he worked in Illinois from May to November during our harvesting season, returning to Texas from November to May during that state's harvest season.

Davis has been manager since February and before this worked for Illinois Farm Supply Company as manager of information and education in the distribution division. Dudley Klamp, assistant sales manager, succeeds McBride as sales manager.

Members of the newly-formed IAA veterinary medical relations advisory committee meet with Dr. C. D. Van Houweling (center) at the IAA offices in Chicago. Left to right: Lee Swinford, president, Edgar County Farm Bureau; Dr. L. A. Dykstra, Aurora, past president, Illinois State Veterinary Medical Association; I. E. Parott, IAA secretary of general services; Van Houweling; Dr. C. R. Collins, Dixon, chairman, executive board, Illinois State Veterinary Medical Association; A. R. Kemp, farm adviser, Knox county; and Edwin Gumm, Knox, member of the IAA board of directors. Ray V. Watson, Mason county farm adviser, is also a member of the committee.

My Blue Seal Feed is delivered *on schedule!*

Blue Seal "Direct-to-the-Farm" Service Helps Rene L. Smith...

Mr. Rene L. Smith of the Gillman community, Iroquois County, has this to say about his Blue Seal Feed Service:

"I have used the Blue Seal Direct-to-the-farm service for five years. If it was not for this service I would have to own a truck or trailer!

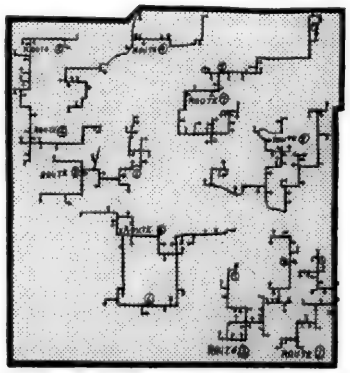
"My salesman, Emory Gilburg, knows the feed I want for my 500 layers and how much. He knows where to put it and he leaves the bill in a handy place we have agreed upon, so if I am in the field, no time is lost by either of us.

"A marvelous service and one I would hate to be without."

Trucks load at central warehouse in Watseka.

Feed is delivered direct to the barn lot.

Iroquois Co. is covered by four feed truck salesmen using the route system. The map of one of the territories is shown at right. The routes cover a two week period. Route 1, 2, 3, 4 one week, 5, 8, 7, 6 the following week.



Map shows one salesman's routes.

Salesman takes order for next delivery.

By JOHN COX
IAA Director of Rural School Relations

FROM the State Advisory Commission we have received the information that 21 counties have sent in their tentative reports.

The number of school districts in the 21 counties listed in the fall of 1945 was 2218. The number of districts recommended in the 21 reports is 299, of which 193 districts are in the Vermilion and Cook counties. Sixty-one of these remaining 106 districts recommended in the other 19 counties are Community Unit districts.

In spite of an early tendency of some county survey committees to consider only grade school reorganization, 14 of the first 21 counties to report recommended unit districts, 9 of the community type, 5 of the county-wide type. In addition to the 21 counties reporting as listed below, Scott county has already voted to set up a county 12 grade district, thus increasing the unit district majority to 15 out of 21 counties.

County Reporting	Fall of 1945	Number Recommended
Henderson	73	2
Warren	129	7
Brown	67	1
Morgan	114	1
Greene	105	3
Macoupin	185	16
Christian	149	11
Montgomery	149	4
Bond	79	4
Clinton	74	3
Pulaski	32	1
Lawrence	79	1
Richland	82	3
Jasper	112	9
Douglas	95	9
Vermilion	187	89
Ford	114	18
Kendall	59	4
Cook	194	104
Edwards	42	1
Rock Island	98	8
	2218	299

Although the Rock Island County Survey Committee recommended unit districts in the main, they also recommended one or two dual system districts for a section of their county. Omitting Rock Island, in the other 20 counties reporting, together with Scott county that has voted but not reported, the score is: Unit District — 14, dual system district — 7.

The numbers mentioned above have nothing to do with school attendance units but refer only to districts for administration and tax purposes.

"Priceless Cargo"

A good school bus transportation film of about 20 minutes in length is "Priceless Cargo." This film will do much to assure doubting parents of the precautions being taken to transport their children safely to and from school. "Priceless Cargo" can be secured free of charge through the State Department of Highways, Traffic Safety Section, Springfield, Ill. This is a carefully produced sound motion film. It received the American Automobile Association award for the year's outstanding non-theatrical motion picture in the field of traffic safety. Local community groups will find "Priceless Cargo" interesting and instructive."

NEWS and VIEWS

Illinois Women Return From Worldwide Meeting In Holland

THE three Illinois women attending the first post war international conference of the Associated Countrywomen of the World held recently in Amsterdam, Holland, came home vastly richer from their contacts with rural leaders in foreign lands.

Mrs. Spencer Ewing of Bloomington was the leader of the entire American delegation of 85 women attending the conference. Mrs. Leonard Kelley of Monmouth represented the president of the Illinois Home Bureau Federation.

Mrs. R. E. Milligan of Urbana was the third Illinois delegate attending the conference. Along with the other delegates, she spent six weeks visiting in Europe during the international gathering.

The delegates sailed on the Queen Mary from the New York City harbor, embarking on Aug. 27 and arriving in England four days later. The women spent four days visiting in England and then went to Amsterdam for the conference. About 500 delegates from 25 countries attended the meetings.

The conference lasted a week, after which the American delegates separated, each to live in Holland with Dutch families.

Mrs. Milligan's experiences were somewhat typical of those encountered by other Americans.

Mrs. Milligan first stayed at the home of a lawyer who had been held in a concentration camp for a year and a half during the war.

She then stayed with a family in Wotesburg in a heavily bombed area. During the bombing, which destroyed most of the town, nine members of the family she was visiting were killed. The father, a man of 70, and his daughter, a woman of about 35, remained.

"Their home had been destroyed with the others. Now the family is living in a little house that is almost a duplicate of the prefabs on college campuses."

"The food was neither plentiful nor very good. The people pooled their ration points and gave the American women the best they could," Mrs. Milligan said.

This area, she said, was right in the richest of the farming land. But the Germans bombed the dikes and the land lay under salt water for a year and a half. The Dutch are trying to get the salt out of the land now, but most of the land still isn't producing.

"Most of the province is a desolate waste," Mrs. Milligan continued. "The salt oozes to the top when it is dry, and then the rain washes it off."

She said the Dutch were not asking for help but expect to make it themselves. She didn't see anyone who wasn't working. They are showing great determination as a nation.

After leaving the Dutch homes, the American group traveled in three big motor buses to Brussels. They spent three days in Belgium and then went on to Paris where they remained until embarking for the United States.

YOUTHFUL STYLE

Young sewers look for several things in a dress pattern and this model answers "yes" to all counts. "Is it easy to make?" is the first question, and the simple gathered skirt and no-sleeve, no-collar styling prove that it is. "Can I wear it often?" is the next question. This style may be dressed up for date wear with a gold belt and jewelry to match the bright buttons at the neckline. For free instructions send a stamped self-addressed envelope to Women's Editor, IAA RECORD, 43 East Ohio, Chicago 5, Ill.

This handsome group is the Bureau County Rural Chorus which was organized in June by the Farm Bureau and Home Bureau. Membership is near 40. Besides performing at the Illinois State Fair, Chicagoland Music Festival, and Illinois State Farm Sports Festival, the chorus has made a great many local appearances. The chorus plans to be bigger and better in the coming year.

for HOMEMAKERS

Here Are Your New Home Advisers

If you were to need a new dress, Miss Jeanine Sutter, Mason county's new home adviser, could probably help you design one. She recently won first prize in a dress contest sponsored by the Peoria Star newspaper. Her design later won an honorable mention when modeled professionally at the Waldorf Astoria Hotel in New York City. She has taught high school for the past three years since her graduation from Illinois State Normal.

Mrs. Mary H. Butler is the new home adviser for Pulaski-Alexander county. She has had experience teaching dietetics in three different hospitals, has taught high school, and has worked for the Farm Security Administration in Illinois.

Transfers from Cass

Miss Donovan Hester has transferred from Cass to become the home adviser in Kankakee county.

Miss Carol V. Rebbe replaced Miss Arlene Wolfram as home adviser in Schuyler-Brown county. Miss Rebbe has taught at Eastern Community high school and has been a home supervisor for the Farm Security Administration.

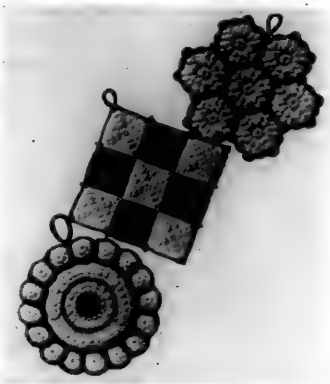
Miss Betty M. Langford became Crawford county's home adviser recently, transferring from Marshall-Putnam and Woodford counties where she had been serving as assistant home adviser.

Miss Bessie L. Alford has been working as home adviser in Iroquois county, coming from Mason county where she has been replaced by Miss Jeannine Sutter.

Miss Margaret M. Stoutenburg, home adviser for newly organized Clay county, is also a University of Illinois graduate. She has taught school at Clay City, Walnut Hill and Xenia and also has worked for the Farm Security and Farmers Home Administration as home supervisor.

Lee county has a new home adviser, Miss June Pilgrim of Coleta. A graduate of the Northern Illinois State Teachers College, Miss Pilgrim taught at the Dakota (Ill.) high school and later became home service adviser for the Illinois Northern Utilities Company at Dixon.

THREE TO CROCHET



Brighten up your kitchen scene with these red and white potholders. The hexagon-shaped potholder is made of white popcorn stitch motifs edged in red. The checkerboard and round styles are crocheted in puff stitch for equally thick, hand-protecting surfaces. For free instructions send a stamped, self-addressed envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio, Chicago, Ill.

The Home Bureau in Washington county, after a year of intensive organizational work, reached its goal last month and has formed the Washington County Home Bureau.

Henderson county also has a new home adviser, Miss Libby Hafner, formerly a Marengo grade school teacher and instructor in the junior high school at Benton Harbor, Michigan.

Anderson Is Now Adviser For Perry

Miss Grace Anderson from Spring Valley, a graduate this year from the University of Illinois, is the new Perry county home adviser.

Mrs. Frances King of Waverly is now home adviser in Cass county. After teaching for three years, Mrs. King became home superviser for the FSA and later worked for the Farmers Home Administration in Georgia.

New Stark county home adviser is Hazel Barackman, a graduate of the University of Illinois and high school home economics teacher.

Osborne to Douglas

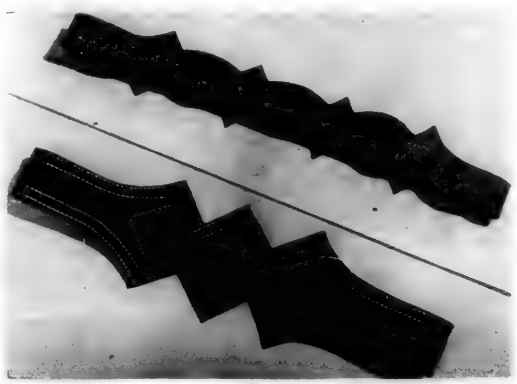
Jeanne Osborne, new home adviser in Douglas county, has worked for the Kiler Furniture Company in Champaign and the Stix, Baer and Fuller company in St. Louis as a buyer.

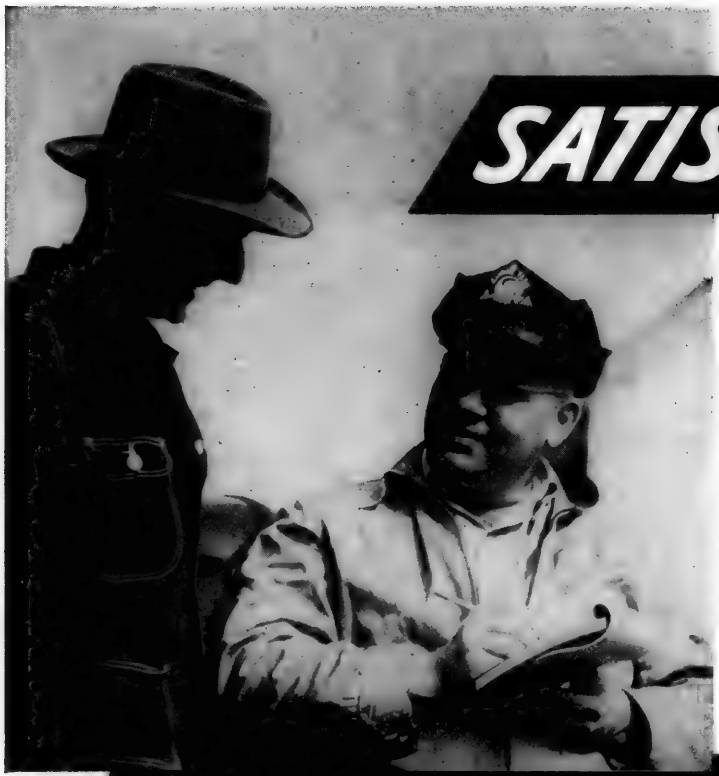
Miss Ann B. Huck is the new home adviser in Jefferson county. She has had experience as a teacher at Hersman, Clay City, and Centralia and has worked for the FSA in Eldorado and Galconda.

Miss Ruth E. Knopp is Monroe's new home adviser. She has taught at the Grand Tower Community high school and received her degree in education from Southern Illinois Normal University.

SMART FELT BELTS

You can have a complete belt wardrobe at very little cost by making your own. Here are two designs to start with. The stitching is simple because there are no seam allowances to consider. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association, 43 East Ohio, Chicago 11, Ill.





SATISFIED!

Royal Widman of La Salle County is well satisfied with the quality products and direct-to-farm service rendered by truck-salesman Shirley Leuty who takes his Future Order.

"For the past 10 years I have depended on Blue Seal Service for oil and grease to operate my tractor, truck and other farm machinery," says Mr. Widman.

Here's why farmers like the Future Order Plan—(1) They like the convenience of placing only one order and getting deliveries as they are needed. (2) They are assured of an adequate supply for the year's work. (3) No down payment. Payment can be made as deliveries are made. (4) They pay less because of a *special discount* for Future Orders.

Order Now - Save the Discount

Decide now, how much oil and grease you will need for next year's farm work. You can order other things at the same time too. Extra spark plugs and oil filters should always be on hand. Include them in your order. If you have never tried Blue Seal Anti-rust, you have a treat in store. Easily applied, it keeps your equipment free from rust until the next work season; a year's protection! Order some.

ILLINI PREMIUM MOTOR OIL

Illini Premium Motor Oil is our most popular oil. It makes up 60% of our total Motor Oil Sales to farmers.

Illini is a new motor oil with 5 outstanding features of superiority; (1) keeps a clean motor clean longer; (2) provides a better piston-seal; (3) non-corrosive to bearing metals; (4) holds resinous varnish formation to minimum; (5) assured longer life for piston rings and cylinder walls.

We salute Farm Youth, "Working Together for a Better Home and World Community."

Most important long-time project of your Farm Bureau is keeping the youngsters "sold" on farming as a way of life, so that our land from generation to generation may be held by those who know it best and love it most.

One way to do this is to make sure that no other calling offers more. The efforts of your Farm Bureau are aimed at doing this — at making farming the most enviable life a man or woman can lead — with better homes, better roads, better schools, better youth programs, better prices, better insurance programs.

That's one sure way to keep 'em down on the farm!

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

WILL YOU LAND ON A CUSHION?

By President Charles B. Shuman

PLAYING in the barn was a forbidden pleasure to us children on the farm. I never fully understood the reason for this rule, until the day our city cousins came for a visit. Jumping from a high step on the hay mow ladder into a pile of loose hay on the driveway floor was an exciting and self-satisfying demonstration of one of the advantages of farm life.

Our visitors were properly impressed and the show continued until, as a result of a slip of the foot, I landed on the edge of the manger instead of the cushion of hay. Having the ego and wind knocked out of me at one and the same time was a painful lesson.

Riding the price cycle to new heights has been a new sensation and perhaps a pleasure to many farmers. Those who had similar experiences a few years ago already are looking about for a soft pile of hay on which to land. We recently have examined a few of the "parachutes" which farmers as an organized group might obtain and use to slow down the descent from these price peaks.

Legislative and group action are very important, but it is also necessary that each farmer make conservative plans for the future. The degree of the impact of a price cycle collapse upon agriculture as a whole depends in part at least upon how well individual farmers have planned their financial cushions.

The disaster of 1932 found very few farmers landing on a pile of hay — many cracked up on the edge of the manger with nothing but a foreclosure notice to show for their experience.

What are some of the ways in which we can build a better cushion for the future? Economists are generally agreed that farmers might well follow two general rules: first, avoid excessive inventories and second, defer spending. Some of our troubles in the period from 1920 to 1932 were due to the inclination of many farmers to carry over their storable crops from year to year, waiting for price increases which never came.

Deferring spending is difficult, especially with high prices and our many unsatisfied wants. Several types of systematic plans are being used by farmers to set aside a definite portion of their present high annual income for future use. Savings accounts, life insurance, annuities, retirement of debts, corporation bonds and U. S. government savings bonds are among the more common methods.

As the year draws to a close, it is encouraging to notice two reports which demonstrate that Illinois farmers appreciate the importance of an adequate financial cushion. Records of Country Life Insurance Company indicate that more farmers than ever before are planning for future estates or retirement through the purchase of life insurance in their own company. U. S. Treasury reports disclose that farmers are buying a higher proportion of the total savings bond sales than ever before. Let us hope that these trends continue.

How good is *your* cushion of hay at the foot of the ladder?

Editorial Offices, 43 East Ohio St., Chicago, Ill. Entered as second class matter at post office, Mendota, Ill., Sept. 11, 1926. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1925. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 43 East Ohio St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578. Undeliverable copies returned under Form 3579 to editorial offices, 43 E. Ohio St., Chicago 11, Ill.

A Child's Prayer— The whispered prayers of children, on Christmas Eve, are full of hope and bright expectations. And in millions of homes, life insurance stands as a guarantee that the wishes of these tender years will be fulfilled. To you, and to yours, our best wishes for a joyous Christmas Holiday.

COUNTRY LIFE INSURANCE COMPANY

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

WILL YOU LAND ON A CUSHION?

By President Charles B. Shuman

PLAYING in the barn was a forbidden pleasure to us children on the farm. I never fully understood the reason for this rule, until the day our city cousins came for a visit. Jumping from a high step on the hay mow ladder into a pile of loose hay on the driveway floor was an exciting and self-satisfying demonstration of one of the advantages of farm life.

Our visitors were properly impressed and the show continued until, as a result of a slip of the foot, I landed on the edge of the manger instead of the cushion of hay. Having the ego and wind knocked out of me at one and the same time was a painful lesson.

Riding the price cycle to new heights has been a new sensation and perhaps a pleasure to many farmers. Those who had similar experiences a few years ago already are looking about for a soft pile of hay on which to land. We recently have examined a few of the "parachutes" which farmers as an organized group might obtain and use to slow down the descent from these price peaks.

Legislative and group action are very important, but it is also necessary that each farmer make conservative plans for the future. The degree of the impact of a price cycle collapse upon agriculture as a whole depends in part at least upon how well individual farmers have planned their financial cushions.

The disaster of 1932 found very few farmers landing on a pile of hay — many cracked up on the edge of the manger with nothing but a foreclosure notice to show for their experience.

What are some of the ways in which we can build a better cushion for the future? Economists are generally agreed that farmers might well follow two general rules: first, avoid excessive inventories and second, defer spending. Some of our troubles in the period from 1920 to 1932 were due to the inclination of many farmers to carry over their storable crops from year to year, waiting for price increases which never came.

Deferring spending is difficult, especially with high prices and our many unsatisfied wants. Several types of systematic plans are being used by farmers to set aside a definite portion of their present high annual income for future use. Savings accounts, life insurance, annuities, retirement of debts, corporation bonds and U. S. government savings bonds are among the more common methods.

As the year draws to a close, it is encouraging to notice two reports which demonstrate that Illinois farmers appreciate the importance of an adequate financial cushion. Records of Country Life Insurance Company indicate that more farmers than ever before are planning for future estates or retirement through the purchase of life insurance in their own company. U. S. Treasury reports disclose that farmers are buying a higher proportion of the total savings bond sales than ever before. Let us hope that these trends continue.

More Funds For Better Roads

STATE MAKES ANOTHER $15,000,000 AVAILABLE FOR ROAD IMPROVEMENT

RULES and regulations for the construction of farm-to-highway roads under Senate Bill No. 378 appropriating another $15,000,000 from state funds have been announced by the division of highways of the state department of public works and buildings.

The division has allocated $7,500,000 from this appropriation to the counties to be spent on township and road district roads. Under the law, another $7,500,000 will be made available next year.

LAW SPONSORED BY IAA

The first bill authorizing a $15,000,000 state grant from general funds for farm-to-highway roads was passed by the legislature in July, 1945. This appropriation, added to the $15,000,000 authorized under the amendment, Senate Bill No. 378, will bring the total state grant to $30,000,000. Under this law and appropriations, the state for the first time recognizes some obligation for the improvement of township and road district roads.

The Illinois Agricultural Association sponsored the legislation providing these funds in the general assembly at the last two regular sessions and is much interested in the administration of this law.

The law provides that after specified administrative expenses are taken out, the rest will be divided among the townships and road districts in proportion to their district mileage.

The rules and regulations for administering this second appropriation are somewhat the same as for the first. The local road commissioner in cooperation with the county highway engineer will select the miles of road to be improved and determine the type of improvement. In the selection of such roads preference may be given to public school bus routes and rural free delivery mail routes. The state division of highways approves all plans and has general supervision of the work and disburses the funds to the counties.

USE OF FUNDS FOR DRAINAGE

The road district will furnish the right-of-way and pay for getting it into condition for resurfacing. However, as much as one-fourth of the district's allocation may be used for drainage purposes. A right-of-way of 40 feet and a roadway of 20 feet are specified, if in the judgement of the road commissioner, such widths will take care of traffic needs and are sufficient to provide for three to one back slopes. It was the aim of those sponsoring this law to make the resurfacing program as simple as possible and to hold requirements as to plans and other paper work to a minimum, so that the greatest mileage of all-weather surfaces can be built.

When this farm-to-highway road program started two years ago, many townships were slow in getting underway due to shortages of labor, materials, machinery, and difficulty in getting plans made and approved. Nevertheless, all counties did participate.

DISSATISFACTION EXPRESSED

Over 11,000 miles of farm roads were resurfaced with the first $15,000,000 allotments incuding 3,000 miles of oiled roads, 7,800 miles of gravel roads, 700 miles of bituminous surfacing (black top) and 2½ miles of concrete road constructed. Townships and road districts may proceed with their resurfacing as soon as their plans are approved and ready. They need not wait until plans for other townships in the same county are approved.

People in several townships have complained that gravel used on their roads was too fine, of poor quality, and often contained a large amount of sand. Many have not liked the selection of roads to be improved. Others thought the particular road to their farm would be improved within the first year.

IAA STRIVES TO GET YOUR FARM OUT OF ILLINOIS MUD

By CHARLES MAYFIELD, Director
IAA Department of Road Improvement

Many miles of farm roads have not been graveled or properly maintained in years because of insufficient road and bridge income. These same roads have bridges out or in need of immediate repair.

TESTS AND INSPECTIONS

The division of highways rules and regulations further state that "All materials shall be inspected and tested for compliance with the specifications before being used in the work. The department will take samples of materials and make field inspection and tests when such can be done without additional expense to the department. Otherwise the county will be expected to either make the tests, have them made without expense to the department, or deliver the samples to one of the department's laboratories for testing."

There are over 1,600 farm-to-highway administrative road districts in Illinois. Each of these districts requires a treasurer, clerk, and road commissioner. The district mileage ranges from less than two-tenths of a mile in one township to over 260 miles in another. More than 450 districts have less than 40 miles of road.

Yet, it is necessary for a district to buy heavy, expensive machinery to maintain and drain roads properly. Much of this machinery is used less than 30 days a year. Annual road and bridge income ranges from a few dollars in many districts to thousands of dollars in others. The overhead cost of supervision, labor, and machinery to do road work in the less wealthy districts has been burdensome.

Farmers and others interested in road improvement should cooperate and work with local road officials. If maximum benefit is to be derived from the use of these state funds, a common understanding of farm-to-highway road problems and unselfishness on the part of all concerned is vitally necessary.

IAA Offers Program at Senate Hearing

Vice President Morris asks for Credit Control, Curbs on Monopolistic Practices, Debt Reduction, and Postponement of Public Building Programs

Following is a statement made by IAA Vice President Floyd E. Morris before the sub-committee of the Committee on Agriculture and Forestry of the U. S. Senate. The sub-committee conducted the hearings Oct. 20-21 at Peoria to get farm opinion on a long-range national program for agriculture.

• • •

MR. Chairman and Members of the Committee: My name is Floyd E. Morris. I am a farmer and vice president of the Illinois Agricultural Association, which has a membership of 146,000 farm families in the state of Illinois. The Illinois Agricultural Association is the Illinois state unit of the American Farm Bureau Federation.

In representing the Illinois Agricultural Association, I want to emphasize that we have participated actively in the formulation of the legislative programs affecting agriculture as sponsored by our national organization, the American Farm Bureau Federation.

We are presenting this statement in support of and supplementary to the statement presented to this committee by the American Farm Bureau Federation.

There are many phases of national legislation affecting agriculture that are of particular interest to farmers in Illinois. This study was made by a committee made up of a farmer representative from each Congressional district in the state. Several of the suggestions originating in this committee study are included in this statement.

NATIONAL POLICIES

While agriculture does have some very specific problems, in general the greatest need for legislative action today is not for special agricultural programs.

We have abundant proof that much of the distress in agriculture has been due to the recurrent, extremely wide fluctuations in the general price level. Throughout the years, our organization has repeatedly taken action urging that national legislation be designed to eliminate these extremely wide fluctuations in the price level of all commodities.

Floyd E. Morris

By resolution in annual meeting, the American Farm Bureau Federation and the Illinois Agricultural Association have made the following definite suggestions in the interest of obtaining greater stability in the price level:

1. The control of many credit and fiscal policies of the federal government should be coordinated under one authority. The purpose of this monetary authority should be to regulate as far as feasible by formula the purchasing power of the dollar. This authority should also have the responsibility of making recommendations to the Congress for action designed to regulate and stabilize the value of money.

2. Business activity can be encouraged by the control of monopolistic practices in business and labor. We urge that the federal government take every possible action to prevent the destruction of competition by abuses common to monopolies.

3. We urge that the federal government restrict large programs of public building to periods of declining price levels.

4. We urge that during periods of high price levels, the federal government take steps to reduce the national debt by reducing expenditures and maintaining taxes at a relatively high level.

FARM PROGRAMS

Through the years there has been developed a national policy for agriculture, embodied in the existing legislation. Step by step this national policy has been modified and improved. Further changes and improvement are certainly needed. I will discuss briefly some of these needed immediately. Other problems not covered in this statement are being submitted to our voting delegates at the forthcoming annual meeting of the Association in November.

PARITY FORMULA

We recognize the need for revision and modernization of the parity formula. Following is a quotation from action taken by the American Farm Bureau Federation which is supported by our organization:

"We believe the parity principle, which includes the fair exchange value concept, has made and will continue to make a valuable contribution to the American economy. The American Farm Bureau Federation will resist any attempt to destroy the parity concept. In previous resolutions we have recognized the need for adjustments in certain commodities and have recommended that steps be taken to develop a plan that will give equitable treatment to livestock products, dairy products, and any other agricultural commodity that is not treated fairly under the present parity formula."

SOIL CONSERVATION

We are very strongly of the opinion that the activities of the federal government in the field of soil conservation should be greatly accelerated and coordinated under one agency. At the present time soil conservation, research, education and promotional work are being carried on by several agencies under the Department of Agriculture. The research work in soil conservation should be assigned to the established State Agricultural Experiment Stations. The educational and promotional activities should be transferred to and administered by the

Agricultural Extension Service at State and County levels.

MARKETING AGREEMENTS

Marketing agreements have been used to the considerable benefit of agriculture in the marketing of milk and other perishable farm products. We believe that this legislation should be strengthened and extended to other perishable crops as the need is demonstrated. We will support such extension and use of these agreements for the purpose of stabilizing production and marketing and for improving the quality of the products needed by consumers.

RECIPROCAL TRADE AGREEMENTS

We favor the principles of reciprocal trade agreements. We support the position taken by the American Farm Bureau Federation in urging that this program be continued. We insist, however, that agriculture and agricultural organizations should be consulted during the period that these agreements are being worked out on agricultural products.

FARM COOPERATIVES

It has been the policy of our government to encourage the development of farm cooperatives for the marketing of agricultural products and the purchasing of needed farm supplies. These agricultural cooperatives recently have been under severe attack. These attacks have followed two lines of thinking — first, it is charged that the agricultural cooperatives have unfair tax advantages; secondly, statements are being made that all cooperatives are socialistic or communistic. Neither of these charges are worthy of your time for a detailed answer. The agricultural cooperatives are, in fact, the very essence of democracy. They do not have unfair tax advantages. We do not ask for any unfair advantages for the cooperatives. We are ready to join with business groups in securing the elimination of any discriminatory taxes which may now be levied upon corporations. We see no need for any great change in the laws affecting agricultural cooperatives.

RESEARCH AND MARKETING ACT

We have given our full support to the Research and Marketing Act adopted by Congress. We urge that the program contemplated under this act be carried out. We particularly would like to urge that increased attention be given to research in the fields of distribution and marketing of farm products. The constantly increasing costs of distribution of farm products has been a contributing cause of the disparity which exists between agricultural and urban income.

Farmers prefer to produce in abundance. We recognize that the future welfare of agriculture and the nation as a whole depends upon maintaining a high level of production, employment and income. This goal cannot be accomplished by agriculture acting alone, but it can be attained through the joint action of all economic groups. Following is a quotation from a resolution adopted at the last annual meeting of the American Farm Bureau Federation:

MAXIMUM PRODUCTION

"We recognize the desirability of full agricultural production, but agriculture cannot maintain full production if industry is going to maintain rigidly high prices by cutting down production and applying monopolistic controls, or if labor is going to insist upon maintaining rigidly high wage rates and to continue such increases in wages without regard to productivity and to enforce such rates with scarcity policies which discourage consumption and throw people out of work and on to relief rolls.

"Farmers believe in an economy of abundance and stand ready to join with industry and labor to achieve maximum production and maximum employment through price policies and wage policies which are geared to a maximum level of consumption."

AFBF CONVENTION PROGRAM

AN outstanding program has been prepared for the 29th annual meeting of the American Farm Bureau Federation Dec. 16, 17, 18 in the Hotel Stevens, Chicago.

President Edward A. O'Neal will give his address the morning of Dec. 16, following the annual report of AFBF Secretary Wilfred Shaw. David E. Lilienthal, chairman, Atomic Energy Commission, will speak on the afternoon program. Voting delegates dinner will be held at 6:30 p.m. Dec. 16 in the South Ball Room of the Stevens.

Dec. 17 speakers and their topics include: Sen. Edward J. Thye of Minnesota, "The Farmer and the United States"; Rep. Harold D. Cooley from North Carolina, "The Farmer and the House of Representatives"; Dean H. P. Rusk, U. of I. College of Agriculture, "The Farmer and His Land Grant College"; Charles F. Kettering, former vice-president, General Motors Corporation, "Beyond the Horizon in Industry", and an address from the winner of the national Rural Youth Talk Meet.

Speakers on the evening program of Dec. 17 will include Mrs. Raymond Sayre, president, Associated Country Women of the World, and James Turner, president, International Federation of Agricultural Producers, and president, National Farmers Union of England.

Dec. 18 program will open with reading of resolutions and will close in the afternoon with election of officers and directors.

STATE 4-H CLUB WINNERS, NATIONAL CANDIDATES LISTED

HERE is the list of Illinois 4-H Club boys and girls who are winners of state contests and who have been submitted as candidates for National honors. More state winners will be announced later.

National 4-H Leadership contest — Submitted for national honors and gold wrist watch for each — Dorothy Giese, LaSalle county; Gilbert Blankenship, Kendall county.

National 4-H Achievement contest — Submitted for national honors — Marjorie Healy, Route 1, Kankakee county; Robert Willrett, DeKalb county.

Farm Underwriters scholarships — $125 — Annabelle Berry, Fulton county; $100 — Betty Jean McCutchan, Hancock; $100 Joann Robinson, Fulton; $125 — Kenneth Heisner, Will; $100 — Paul Bates, McLean; $100 — Raymond Brunner, Sangamon.

Illinois Poultry Improvement Association contest — Scholarships — $100 each — Robert G. Willrett, DeKalb county; John Robert Huber, Knox; Ralph E. Werner, Will.

National Dairy Production contest — Submitted for national honors and $25 bond each — Class A members without animals in production. Donald Plote, Elgin, Kane County; Harvey Huftalin, DeKalb; Franklin Unruh, Will; Gordon Bauer, Tazewell; Class B — members with animals in production. Phillip W. Myers, Coles; Norvin Koop, Will; Floyd Hutchings, Lake; LaRue Schad, McLean; Alternate — Leonard Lane, Mason.

IAA Offers Program at Senate Hearing

Vice President Morris asks for Credit Control, Curbs on Monopolistic Practices, Debt Reduction, and Postponement of Public Building Programs

Following is a statement made by IAA Vice President Floyd E. Morris before the sub-committee of the Committee on Agriculture and Forestry of the U. S. Senate. The sub-committee conducted the hearings Oct. 20-21 at Peoria to get farm opinion on a long-range national program for agriculture.

* * *

MR. Chairman and Members of the Committee: My name is Floyd E. Morris. I am a farmer and vice president of the Illinois Agricultural Association, which has a membership of 146,000 farm families in the state of Illinois. The Illinois Agricultural Association is the Illinois state unit of the American Farm Bureau Federation.

In representing the Illinois Agricultural Association, I want to emphasize that we have participated actively in the formulation of the legislative programs affecting agriculture as sponsored by our national organization, the American Farm Bureau Federation.

We are presenting this statement in support of and supplementary to the statement presented to this committee by the American Farm Bureau Federation.

There are many phases of national legislation affecting agriculture that are of particular interest to farmers in Illinois. This study was made by a committee made up of a farmer representative from each Congressional district in the state. Several of the suggestions originating in this committee study are included in this statement.

NATIONAL POLICIES

While agriculture does have some very specific problems, in general the greatest need for legislative action today is not for special agricultural programs.

We have abundant proof that much of the distress in agriculture has been due to the recurrent, extremely wide fluctuations in the general price level. Throughout the years, our organization has repeatedly taken action urging that national legislation be designed to eliminate these extremely wide fluctuations in the price level of all commodities.

Floyd E. Morris

By resolution in annual meeting, the American Farm Bureau Federation and the Illinois Agricultural Association have made the following definite suggestions in the interest of obtaining greater stability in the price level:

1. The control of many credit and fiscal policies of the federal government should be coordinated under one authority. The purpose of this monetary authority should be to regulate as far as feasible by formula the purchasing power of the dollar. This authority should also have the responsibility of making recommendations to the Congress for action designed to regulate and stabilize the value of money.

2. Business activity can be encouraged by the control of monopolistic practices in business and labor. We urge that the federal government take every possible action to prevent the destruction of competition by abuses common to monopolies.

3. We urge that the federal government restrict large programs of public building to periods of declining price levels.

4. We urge that during periods of high price levels, the federal government take steps to reduce the national debt by reducing expenditures and maintaining taxes at a relatively high level.

FARM PROGRAMS

Through the years there has been developed a national policy for agriculture. embodied in the existing legislation. Step by step this national policy has been modified and improved. Further changes and improvement are certainly needed. I will discuss briefly some of these needed immediately. Other problems not covered in this statement are being submitted to our voting delegates at the forthcoming annual meeting of the Association in November.

PARITY FORMULA

We recognize the need for revision and modernization of the parity formula. Following is a quotation from action taken by the American Farm Bureau Federation which is supported by our organization:

"We believe the parity principle, which includes the fair exchange value concept, has made and will continue to make a valuable contribution to the American economy. The American Farm Bureau Federation will resist any attempt to destroy the parity concept. In previous resolutions we have recognized the need for adjustments in certain commodities and have recommended that steps be taken to develop a plan that will give equitable treatment to livestock products, dairy products, and any other agricultural commodity that is not treated fairly under the present parity formula."

SOIL CONSERVATION

We are very strongly of the opinion that the activities of the federal government in the field of soil conservation should be greatly accelerated and coordinated under one agency. At the present time soil conservation, research, education and promotional work are being carried on by several agencies under the Department of Agriculture. The research work in soil conservation should be assigned to the established State Agricultural Experiment Stations. The educational and promotional activities should be transferred to and administered by the

Agricultural Extension Service at State and County levels.

MARKETING AGREEMENTS

Marketing agreements have been used to the considerable benefit of agriculture in the marketing of milk and other perishable farm products. We believe that this legislation should be strengthened and extended to other perishable crops as the need is demonstrated. We will support such extension and use of these agreements for the purpose of stabilizing production and marketing and for improving the quality of the products needed by consumers.

RECIPROCAL TRADE AGREEMENTS

We favor the principles of reciprocal trade agreements. We support the position taken by the American Farm Bureau Federation in urging that this program be continued. We insist, however, that agriculture and agricultural organizations should be consulted during the period that these agreements are being worked out on agricultural products.

FARM COOPERATIVES

It has been the policy of our government to encourage the development of farm cooperatives for the marketing of agricultural products and the purchasing of needed farm supplies. These agricultural cooperatives recently have been under severe attack. These attacks have followed two lines of thinking — first, it is charged that the agricultural cooperatives have unfair tax advantages; secondly, statements are being made that all cooperatives are socialistic or communistic. Neither of these charges are worthy of your time for a detailed answer. The agricultural cooperatives are, in fact, the very essence of democracy. They do not have unfair tax advantages. We do not ask for any unfair advantages for the cooperatives. We are ready to join with business groups in securing the elimination of any discriminatory taxes which may now be levied upon corporations. We see no need for any great change in the laws affecting agricultural cooperatives.

RESEARCH AND MARKETING ACT

We have given our full support to the Research and Marketing Act adopted by Congress. We urge that the program contemplated under this act be carried out. We particularly would like to urge that increased attention be given to research in the fields of distribution and marketing of farm products. The constantly increasing costs of distribution of farm products has been a contributing cause of the disparity which exists between agricultural and urban income.

Farmers prefer to produce in abundance. We recognize that the future welfare of agriculture and the nation as a whole depends upon maintaining a high level of production, employment and income. This goal cannot be accomplished by agriculture acting alone, but it can be attained through the joint action of all economic groups. Following is a quotation from a resolution adopted at the last annual meeting of the American Farm Bureau Federation:

MAXIMUM PRODUCTION

"We recognize the desirability of full agricultural production, but agriculture cannot maintain full production if industry is going to maintain rigidly high prices by cutting down production and applying monopolistic controls, or if labor is going to insist upon maintaining rigidly high wage rates and to continue such increases in wages without regard to productivity and to enforce such rates with scarcity policies which discourage consumption and throw people out of work and on to relief rolls.

"Farmers believe in an economy of abundance and stand ready to join with industry and labor to achieve maximum production and maximum employment through price policies and wage policies which are geared to a maximum level of consumption."

AFBF CONVENTION PROGRAM

AN outstanding program has been prepared for the 29th annual meeting of the American Farm Bureau Federation Dec. 16, 17, 18 in the Hotel Stevens, Chicago.

President Edward A. O'Neal will give his address the morning of Dec. 16, following the annual report of AFBF Secretary Wilfred Shaw. David E. Lilienthal, chairman, Atomic Energy Commission, will speak on the afternoon program. Voting delegates dinner will be held at 6:30 p.m. Dec. 16 in the South Ball Room of the Stevens.

Dec. 17 speakers and their topics include: Sen. Edward J. Thye of Minnesota, "The Farmer and the United States"; Rep. Harold D. Cooley from North Carolina, "The Farmer and the House of Representatives"; Dean H. P. Rusk, U. of I. College of Agriculture, "The Farmer and His Land Grant College"; Charles F. Kettering, former vice-president, General Motors Corporation, "Beyond the Horizon in Industry", and an address from the winner of the national Rural Youth Talk Meet.

Speakers on the evening program of Dec. 17 will include Mrs. Raymond Sayre, president, Associated Country Women of the World, and James Turner, president, International Federation of Agricultural Producers, and president, National Farmers Union of England.

Dec. 18 program will open with reading of resolutions and will close in the afternoon with election of officers and directors.

STATE 4-H CLUB WINNERS, NATIONAL CANDIDATES LISTED

HERE is the list of Illinois 4-H Club boys and girls who are winners of state contests and who have been submitted as candidates for National honors. More state winners will be announced later.

National 4-H Leadership contest — Submitted for national honors and gold wrist watch for each — Dorothy Giese, LaSalle county; Gilbert Blankenship, Kendall county.

National 4-H Achievement contest — Submitted for national honors — Marjorie Healy, Route 1, Kankakee county; Robert Willrett, DeKalb county.

Farm Underwriters scholarships — $125 — Annabelle Berry, Fulton county; $100 — Betty Jean McCutchan, Hancock; $100 Joann Robinson, Fulton; $125 — Kenneth Heisner, Will; $100 — Paul Bates, McLean; $100 — Raymond Brunner, Sangamon.

Illinois Poultry Improvement Association contest — Scholarships — $100 each — Robert G. Willrett, DeKalb county; John Robert Huber, Knox; Ralph E. Werner, Will.

National Dairy Production contest — Submitted for national honors and $25 bond each — Class A members without animals in production. Donald Plote, Elgin, Kane County; Harvey Huftalin, DeKalb; Franklin Unruh, Will; Gordon Bauer, Tazewell; Class B — members with animals in production. Phillip W. Myers, Coles; Norvin Koop, Will; Floyd Hutchings, Lake; LaRue Schad, McLean; Alternate — Leonard Lane, Mason.

By Dr. Don Van Houweling,

Director, IAA Department of Veterinary Medical Relations

PUBLICIZED widely during the past few years, brucellosis in cattle, commonly called Bang's disease, is pretty well known to Illinois farmers. But brucellosis in hogs, also known as Traum's disease, is a relatively new disease to most hog farmers. I have been impressed by this fact while meeting with farmers all over the state. This is only natural because it has not been in the limelight until recently.

The germ causing this disease in swine is similar to the one causing Bang's disease in cattle. I like to think of them as brothers in the same family — the Brucella family. The germ in cattle is known as Brucella abortus and in hogs Brucella suis. The hog germ can infect cattle but the cattle germ has not been proven to infect hogs.

Both germs can infect man and cause the disease known as undulant fever, Malta fever, or brucellosis. The swine germ is believed to be more likely to infect humans than the cattle "bug."

How do humans get the disease? 1. By handling the diseased animal itself, 2. By contacting discharges from an infected hog, 3. By helping an infected sow at farrowing, 4. By slaughtering diseased swine and, 5. By eating pork from an infected hog if the meat was not thoroughly cooked.

So don't forget that hogs on your farm infected with this disease are a distinct menace to the health of you and your family. Further proof of this fact is that records show that veterinarians and workmen on the hog slaughtering floors in packing houses are the most likely to get undulant fever.

How can I protect myself from exposure to this disease? Farmers and veterinarians can protect themselves by wearing rubber gloves. When helping a sow farrow, handling dead pigs, membranes, or exposing hands to animal discharges a pair of rubber gloves are worth their weight in gold and the cheapest insurance I know of.

In some ways this disease in hogs is similar to Bang's disease in cattle but there are several distinct differences too.

The similarities: 1. Often causes the sow to abort or "slip" pigs. 2. Is detected by means of the blood test. 3. Hogs may have the disease without visible outward signs. 4. Causes a severe loss when in a herd.

The differences: 1. Usually shorter lived in individual animals, sows usually abort but once. 2. Boars are the worst spreaders of this condition. 3. Swollen testicles as a result of orchitis (inflammation of the testicle) is a common symptom. 4. Progressive posterior paralysis is a common symptom in sows. 5. Vaccination does not seem to be of value against this disease in hogs. 6. The blood test is not as reliable on individual animals.

How widespread is this condition? Dr. I. Forrest Huddleson, a recognized authority on brucellosis, is reported to have said, "From 50-90 per cent of the pigs farrowed by diseased sows will die before they are four days old and from 20-50 per cent infection exists in large herds where swine raising is a major industry." The American Foundation for Animal Health estimates that 20 per cent of the herds in the U. S. are infected.

Check your breeding herd by having your veterinarian draw blood samples from them and subject it to the agglutination test. If you have no reactors or only a few suspicious reactions in the herd at low dilutions you can consider yourself extremely fortunate. Your only worry is to be sure you don't introduce the disease to your herd by animals you buy — especially boars. Buy boars from herds *known* to be free from the disease. If you can't do that have them blood tested twice about 60 days apart before using them for breeding.

By Lew Reisner,

Field Editor, Illinois Agricultural Association RECORD

Headline illustration shows a few of the 18,000 turkeys grown on the Wenzel brothers farm near Kirkland in DeKalb county.

FAR as the eye can see, turkeys fan out over the 50 acre alfalfa range on the Wenzel farm near Kirkland in DeKalb county. Majestic busybodies with plumages of royal purple and voices like saucy court jesters, these fine birds live a short, pampered life destined to grace some lucky family's Christmas dinner table.

The holidays are harvest time for Harvey and Earl Wenzel, long-time Farm Bureau members who raised 18,000 turkeys this year. Fifteen years ago their farm was devoted to four-legged stock. Turkey raising for the Wenzels is now a $100,000 a year business.

When you sit down to that big turkey dinner complete with fixin's, just be thankful there are men around who know turkey raising like the Wenzels. Because before you can relish that tasty bird there's a lot of work, expense, and worry. Turkeys, it should be remembered, often act in ways beholden not to their keepers.

"You can never be sure," Earl Wenzel said recently in the sober way of the experienced. "Something panicked our neighbor's flock one night and they flattened 20 rods of fence in their fright." Turkeys also are panicked by airplanes which they take for hawks, their natural enemy.

But the Wenzels will caution not to sell the bird short on intelligence which they say is higher than most other fowl. "They balance their own ration almost completely. They always face into the wind, and keep a sharp wild-animal lookout for danger from above."

The Wenzel brothers didn't jump into turkey raising all at once and they wouldn't advise anyone else to plunge either.

"Last year," Earl said, "turkey raisers who had to buy much of their feed just about lost their shirts. The market is full of pitfalls."

The brothers started out modestly in the early thirties when Harvey finished engineering school and came back to the farm. The two brothers formed a partnership. In 1936 they sold 300 birds, jumped to 1000 in 1937, and by 1939, a good year, were well into the business.

This year, with their whopping crop of 18,000 birds, their biggest year, the Wenzels had invested in feed, labor, and upkeep at least $100,000 before they sold a single bird. They have no other stock on the farm, except the gobblers.

The reason for this big feed and labor bill is easy to find. It takes from five to six men to handle the gobblers and do the field work, and a night man to watch over the birds.

And turkeys aren't exactly dainty eaters. Here's what they will consume from March to December: 25 tons of breeder mash (for the breeder stock), 1500 tons of growing mash, 10,000 bushels of oats, 16,000 bushels of corn plus 75 acres of alfalfa range.

In all, it takes 80-100 pounds of feed to mature a 20 pound turkey. At present prices Wenzels have from $6 to $7 invested in each bird.

The Wenzels champion their own mixture of growing mash which they believe gives their birds a special flavor. It is very heavy with soybean oil meal, which the U.S. Department of Agriculture says has a very favorable effect on turkey meat. For each 1000 pounds of mash they use 300 pounds of soy oil meal.

Incidentally, Earl Wenzel, somewhat a student on marketing, thinks that because of the record-breaking pre-Thanksgiving and Thanksgiving marketing, the Christmas turkey may be hard to buy and high in price. Earl is a

12-GRADE SCHOOL DISTRICT GAINS FURTHER SUPPORT . . .

By JOHN K. COX, Director
IAA Department of Rural School Relations

TO DATE, 34 counties have sent in tentative school reports. The recommendations made are as follows:

SEVEN counties have recommended school reorganization only on the dual basis.

TWO counties have recommended mainly three grade community unit districts but have also made several recommendations for dual system districts.

TWELVE counties have recommended county 12-grade units.

THIRTEEN counties have recommended the large community 12-grade district.

Over 75 per cent of the recommendations to date have been for the 12-grade unit.

In traveling over Illinois, we find close similarity in the type of questions and objections offered at practically all of the meetings on school reorganization.

. . . AS RURAL PEOPLE SEE SOME OF ITS ADVANTAGES

Objections and Questions

I shall attempt to enumerate some of the objections to school reorganization and questions concerning it. One question is, how can we keep local control in reorganizing schools? The answer is that the purpose of school reorganization is to make local control work. There are many examples to show that local control has not worked as well as it should, particularly in recent years. A small district may be, and often is, very autocratic.

It is small enough to be a political football and to be affected by the whims of one or two leading families in the community. Sons, daughters, nieces, and friends often are placed on the faculty of such a school because of the prestige of a single individual. Such favoritism is detrimental to the spirit and morale of the school.

However, if more representation than is possible under a seven-member board is desired in a larger district, it is possible to set up an advisory committee with one member from each township or former school district to meet with the school board periodically or upon request, at least until the area has passed through the transition stage of reorganization.

What is the Purpose?

Another objection often heard is that it isn't fair to a little town to take away its high school. Let us ask ourselves first, what is the purpose of the high school — to train pupils or to get business? If the high school *isn't doing the job,* it is a waste of money and time, and the community will deteriorate both socially and economically as a result.

Also, school reorganization involving bigger high school attendance units does not take the high school away from the people. It provides a better high school a few miles away, whose program, adapted to the needs of the larger community, will be much more beneficial to the community life and prosperity of the entire area than the meager offering of a small high school can possibly be.

Smallest Effective Unit

It is sometimes mentioned that a pupil will lose all individuality in a larger school. In answer, it might be said that the organization of a school rather than its size is the determining factor in whether a child receives special and needed attention. In most rural communities and small towns, that would not be a problem at all. Also, I have known schools of 3,000 or more that are so organized that several members of the faculty know each pupil intimately and by name, at least one of which faculty members has been to the pupil's home and where the pupil is impressed with his worth as an individual and has the value of good counseling service, as well.

Another question is, what is the smallest high school enrollment that would serve as a suitable base for a 12-grade unit? I think we would pretty generally agree that the smallest effective high school unit that can be financed at reasonable cost would have an enrollment of from 150 to 300 pupils. If one high school attendance unit is in prospect, then the distance to travel, the condition of the roads, and the location of those roads would have considerable to do with determining how large a school district can reasonably be.

Another stock question is, how can we reorganize schools until we have the roads first? As was mentioned before, bad roads need not postpone school reorganization since no school should be closed until transportation in that particular area is possible. The fact remains, though, that we have needed better roads *for years* and have made little *headway* until the school reorganization program has developed. We are just beginning to make some notable progress from the state level in the direction of better secondary roads. The experience in other states is that school reorganization provides a very good lever for obtaining better roads. In the meantime, many advantages of a cooperative nature can be enjoyed by the larger administrative district while maintaining all or part of the present attendance units.

Get Good Board Members

Another question is, who can we get to handle such a big job? Well, we should select only the best people for board members, and it is easier to choose a few good board members than many. Also, the school districts of Springfield, Peoria, Rockford, and others, all large systems, have numerous school buildings, pupils, and teachers and yet only one board of education to handle each. The city of St. Paul, for example, has only one school board member which they call a commissioner of education. Much reliance must be placed in school district superintendents and their principals. The board is, and should remain, largely, a policy-making body.

Another question is, won't high school principals, in the main, be selected as superintendents of these unit districts? The answer is "yes" in many cases, part-

(Continued on Page 26)

HAWKEYE

The New Soybean

HAWKEYE, a sturdy new soybean with a large, yellow seed, was introduced this fall by the Illinois agricultural experiment station during the time when most of the state's soybean acreage was being combined.

This new high yielding bean is expected to be of greatest value in the northern one-half of the state in the area where the Richland variety is now produced. It can be used as an early variety to follow winter wheat.

J. C. Hackleman, University of Illinois crops specialist, who helped to farm out a small amount of stock seed this year, says Hawkeye has the same resistance to lodging as Richland, but is higher yielding and grows taller.

The experiment station has only a small amount of seed on hand and this will be allotted to counties in the northern one-half of Illinois on the basis of their acreage of Richland beans during the past two years of 1945-46.

HAWKEYE IS TALLER

The Hawkeye plants grow from four to six inches taller than Richland and stand well. There is little or no shattering. The pods are light in color and usually contain two yellow, almost round seeds, with a hilum color characteristic only to Hawkeye.

During a four-year test from 1943 to 1946, Hawkeye yielded an average of 32.1 bushels an acre compared to 33.2 for Lincoln, 28.3 for Richland and 29.5 for Mukden.

In short, the new bean combines the better characteristics of the Lincoln and Richland. Its yield is about that of Lincoln and has about the same oil content. It matures as early as Richland but grows four to five inches taller and has Richland's same resistance to lodging.

First of the '48 soybean crop comes pouring out of combine hopper held by Joe Mumaw on the Cowles farm near Alpha, Henry county.

The oil content has averaged 20.6 per cent for Hawkeye, 20.7 for Lincoln, 20.2 for Richland, and 19.4 for Mukden, Hackleman reports. Hawkeye matures about as early as Richland.

The Hawkeye variety was developed from a cross between Mukden and Richland made at the USDA regional soybean laboratory located at Ames. The Illinois Experiment Station is associated with the regional laboratory and gets its Hawkeye seed through them.

Hackleman said that the experiment station will insist that Illinois Hawkeye growers agree to a rather rigid four point control program to allow for maximum yields of seed beans next fall.

To qualify as a grower farmers must: 1. Agree to certify all acreages seeded to Hawkeye. 2. Agree to not sell seed outside their county until the county is supplied.

3. Follow the instructions of the state and county seed distribution committees on the amount of seed to sow per acre, the final selling price of the seed, and other regulations.

4. Have had experience in producing certified seed and have demonstrated previously their ability to produce and distribute high-quality seed.

County committees will be asked to serve in much the same way they did for distributing Clinton oats a year ago. All seed produced in Illinois will be used in the state.

'47 CROP EXCELLENT

Frank Haines of the Illinois Grain Corporation said the quality of the Illinois crop this year was excellent.

Haines reported that as of early November almost all the beans sold thus far on the Chicago Board of Trade have been graded as No. 1 and No. 2 beans. The moisture content has been low, running under 13 or 14 per cent.

The beans, he said, have been coming into the large markets fairly clean, due in part to the fact that this year growers have had to stand all the dockage. Last year the processors assumed dockage up to two per cent by weight for weed seeds and foreign matter.

The 1947 crop was estimated on Oct. 1 as being 64,087,000 bushels, well above the 1936-45 ten-year average of 50,239,000 bushels, but down from the bumper 1946 crop of 75,036,000 bushels.

County committees will be asked to serve in much the same way they did for distributing Clinton oats a year ago. All seed produced in Illinois will be used in the state.

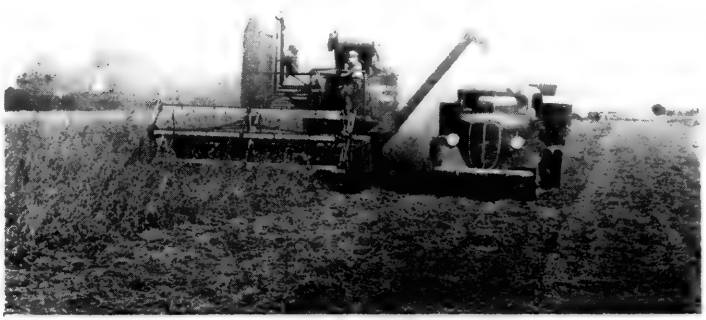
A-1 CROP EXCELLENT

Frank Haines of the Illinois Grain Corporation said the quality of the Illinois crop this year was excellent.

Haines reported that as of early November almost all the beans sold thus far on the Chicago Board of Trade have been graded as No. 1 and No. 2 beans. The moisture content has been low, running under 13 or 14 per cent.

The beans, he said, have been coming into the large markets fairly clean, due in part to the fact that this year growers have had to stand all the dockage. Last year the processors assumed dockage up to two per cent by weight for weed seeds and foreign matter.

The 1947 crop was estimated on Oct. 1 as being 64,087,000 bushels, well above the 1936-45 ten-year average of 50,239,000 bushels, but down from the bumper 1946 crop of 75,036,000 bushels.



Combine loads truck on northern Illinois farm with precious cargo of Hawkeye beans, new variety now available only as seed stock.

LETTERS TO THE EDITOR

DEFENDS CO-OPS

I have been reading page 10 of the October issue (of the Illinois Agricultural Association Record) about "Farm Bureau Co-ops Attacked," and find some facts missing in the article.

The article was spineless and not vigorous enough. It did not even mention the names of the Illinois or national group spreading the pamphlet.

Compared with what I have read in pages in farm publications in North Dakota about the present congressional committees investigating cooperatives, the article was as strong as milk toast.

What is the Association going to do about reporting to its members the whys and wherefores of the present attack on cooperatives? If the national Republican party in Congress has voted the investigation let's have the names of the Illinois Republican congressmen who voted in favor of the committee.

The Association could well spend some time and money looking into the records of every man mentioned on page 10. From experience I know at least one bad apple will turn up among them. If they are incorporated, the way they exercise their corporate power can be examined. This group is probably connected with some national group, and you should publish their connection.

The IAA does not have to stand by and let lies be told about it. The members know the truth, but the article said nothing about what the IAA was going to do against the pamphlet.

David V. Lansden
Board of Trade Building

The name of the organization attacking Illinois Farm Bureau cooperatives is the Illinois Associated Businessmen, 231 South La Salle Street, Chicago, Ill.

STEAK IS CHEAP

Here is one for the books. The first concrete evidence that beef steak is not too high.

I drove into the Pontiac garage in Champaign to get a wheel bearing replaced. Was told they could do it sometime during the afternoon.

When I told them I couldn't wait they said, "O.K., we'll fix it." I stayed there and timed the mechanic. He replaced a tie-rod knuckle and the bearing in 20 minutes. My bill was $11.01, broken down as follows: tie rod knuckle, $2.60; bearing, $3.45; bearing, $2.05; tax, 16 cents; and labor, $2.75.

I asked him what the labor rate was and he told me it was a flat rate. I said: "O.K., here's your money. I am a farmer and I would like to tell you that beef steak is plenty cheap, my friend. At that rate, an hour's labor is $8.25 and there has never been a time in history when it would buy so much cow!"

LIKES WOMEN'S PAGE

I do enjoy the (RECORD) women's section. It's always the first section read. This month's article about Mrs. Milligan's trip to Holland was especially good, for just a few days ago she talked to the ladies of our Home Bureau and told of her eperiences and impressions of the folks of Holland and we all enjoyed it so much and learned so much too — so it was nice to read the article too.

"BEST YET"

Allow me to pass on to you many compliments on your November issue of the IAA Record. Personally, I thought it was the "best yet" edition, and the many favorable comments from various members in the county only substantiated my impression. Some members praised one article, others another, etc., but all agreed every page contained interesting, important information for all concerned.

Keep cows off pastures until the ground is dry enough to prevent damage from trampling.

Food Conditions In Europe Worse Than Year Ago

FOOD conditions in Europe today are reported to be worse than a year ago. Spring floods, unseasonable frosts and a summer drouth destroyed basic crops, grain reserves and livestock in country after country.

Farmers can better understand what such disaster means than any other class of American people. The situation is critical. UNRRA has terminated its food program. United Nations' and government proposals will take many months of study and debate before they can be put into action. Rations have been cut and in some countries it is expected that 70 per cent of all children born this year will die before reaching their first birthdays, and 75 per cent of those surviving will have tuberculosis.

An opportunity to save a child's life is offered through CARE (the Cooperative for American Remittance to Europe), a non-profit cooperative of 27 of the major relief agencies accredited by the U. S. government for overseas relief.

SEND A PACKAGE

By sending a check or money order made out to CARE, 189 West Madison Street, Chicago, you can send a package of clothing or food to a relative, a specified person or persons or group in Austria, Belgium, Bulgaria, Czechoslovakia, Ireland, Finland, France, Germany, Great Britain, Greece, Hungary, Italy, the Netherlands and Poland. If you have no particular person in mind you can specify the type of family either by religious denomination or race that you wish to receive the package. The packages are distributed by a CARE agent under police protection in cooperation with local authorities. If you do not receive a signed receipt for your package within 120 days, your money is refunded.

Ten dollars will feed a family of four for two weeks. No one receiving a CARE package is denied regular rations. To prevent any black market operations, persons are limited to three packages per month.

Member relief organizations included in CARE are the Church World Service, representing the Protestant churches and the War Relief Service of the National Catholic Welfare Conference, representing the relief agencies of the Catholic churches.

George B. Whitman, (second from left) state officer of the extension farm labor program, discusses with IAA staff men plans to put a simplified farm account book into the hands of every farmer interested. Left to right: I. E. Parett, secretary of the division of general services; Whitman; Roy Johnson, director of special services; and Charles Mayfield, director of road improvement.

A New Approach To Simple

Farm Accounting

A NEW simple farm record book will be offered Illinois farmers this winter. It is easy to keep and all entries are keyed to fit the farm income tax form 1040F which makes up the last pages of the book.

It will do a lot more, however, than just help with the farm income tax. It was set up as a real chore boy by the farm tax and management experts from the University of Illinois College of Agriculture who did the work on the book.

It can be used to find inventory values. Most farmers admit they don't know what they're worth until the day they sell out.

It makes possible farm family budgets. If you know accurately what you are making you can plan such home improvements as a new furnace or a water system.

It makes possible credit statements. If you know your income you know how much to borrow safely.

It makes possible a continuous study and application of basic farm management. You may find your labor with chickens worth twice that spent on a dairy herd.

To help show farmers what this new farm account book can do and to answer questions on income tax and farm management problems, farm advisers are scheduling a series of county meetings for December and January.

Men from the College of Agriculture and the Illinois Agricultural Association will be present at these meetings to help answer questions.

RADIO TO HELP

President Charles B. Shuman has announced that I. E. Parett, secretary of general services, Charles Mayfield and Roy Johnson will represent the Illinois Agricultural Association at these county meetings. Walter Batson will represent the Illinois Farm Supply Company.

George B. Whitman, former farm adviser in Henderson and Adams county, will be in charge of the project for the College of Agriculture.

Many others, including radio stations, newspapers, farm magazines, teachers, co-op managers, farm loan and credit managers, and local bankers, will assist the county farm advisers in a gigantic promotion program.

"We want to put this book into the hands of as many as possible of the 130 thousand larger farmers and an additional 50,000 smaller farmers in the state," Whitman said recently in a speech to farm advisers launching the program.

Dean Rusk of the College of Agriculture has given his unqualified support of the book, considered by many to be the best simple and practical approach yet conceived to good farm accounting and management.

The final cost of the book has not been announced and may vary a little from county to county, but the cost is certain to be less than 40 cents. It will be available for each county of the state.

Speaking of its advantages, Parett said recently, "The FFA and 4-H club kids keep records and now we're giving Dad a chance to do the same thing. It isn't a lot of hard work by any means.

"It's also a history of a farmer's activities. Wouldn't you like to know, for example, what kind of a year your Dad had in 1917?"

EGGS, GAS, AND RENT

The book has columns to enter receipts from eggs, dairy, grain, hay, custom work, capital items, work off farm, government payments, patronage refunds, breeding fees, sale of purchased and raised livestock, non-farm income, and unusual items as sale of timber.

It has a place to enter expenses for purchase of capital items, feed, repairs and machinery hire, gas, oil, car expense, utilities, fertilizers, seeds, crop expense, hired labor, taxes, rent, interest, insurance, improvements, breeding fees, veterinary and livestock expenses.

It has space for a depreciation schedule for machinery and equipment, automobile, soil improvements, farm improvements, purchased livestock, record of prepaid insurance. It also provides space for inventories of feed, grain, seeds, hogs, poultry, sheep, cattle, horses and other livestock.

Each column and each entry in the new account book is explained clearly, and in terms familiar to farmers. There is no space, and no need for time taking entries such as the number of pounds of feed consumed by livestock each day.

Useful tables that provide valuable information, such as the average useful life of farm animals, have been incorporated into the book.

If you keep this amazingly simple account book as you go along through the year it will record all you need to fill out your farm income tax.

Let's keep it that wo

This message is presented in behalf of the 103 Farm Bureau type co-operatives that are members of ..
ILLINOIS FARM SUPPLY CO.

YOUR COMPANY and mine has had a great history. It's a 25-year history of farmers who, in days of great trials and tribulations, organized their own co-operative associations to provide themselves with better markets for the products from their farms and better distribution facilities for the supplies needed in production. Your company and mine has done a great job. Reports of progress and achievements will be made at your local annual meeting.

Your company and mine is a splendid example of American free enterprise. Farm people are free businessmen. They own and operate farms. They invest capital. They work mentally and physically. They buy and sell. Through your local co-operative associations you have multiplied your effectiveness tremendously, but there are segments of business that would deny the right of farmers to engage in co-operative business. These business interests would deny the right of farmers to make savings through patronage refunds. They would have the public believe that farmer co-operatives escape taxation. They would have the public believe that you are un-American.

These charges are not true. Your company and mine pays every tax that business is called upon to pay, *including* federal income taxes. Income taxes are paid upon all net income which is not refunded to member patrons at the close of the year. Income tax is paid on non-member business, even though such earnings may not be retained in the capital structure. Income taxes are paid upon the amounts paid as capital stock dividends. In this respect, your company and mine is subject to the same double taxation as all other corporations.

Income taxes, however, are not paid on patronage refunds, and we believe that they should not be. The patronage refund check you receive at annual meeting this Fall and Winter is taxable in your hands. It is nothing more than an adjustment in the price you paid at time of purchase.

This privilege is not limited to farm co-operative associations. There are many businesses that use a similar approach. Many insurance companies operate on this basis. There are many independent grocer, hardware, automotive, and

hat way by attending your local annual meeting!

news gathering organizations that operate on the same co-operative type basis. These organizations are set up to provide the economies of large volume and they return their savings to their member companies on the basis of use, just the same as your company and mine. To charge your company and mine of being un-American is only done to confuse the issue.

If your company and mine has well informed members, there is little to fear. We can be criticized, ridiculed, and unfairly attacked—from the outside, and some of this may be good for us. The great danger lies *within!* This is the danger of having mis-informed and uninformed members.

So plan to attend the annual meeting of your local county Farm Bureau, your local service company, your local grain marketing association, your local livestock marketing association, your local creamery. You will have greater need for them in the future than you have had in the past. They need your voice; they need your vote; they need your vigorous support.

Steffey's handsome Durocs are about ready for shipping. Here he discusses when to ship with one of his operating partners, Clifford Gray.

Director Otto Steffey is VETERAN LIVESTOCK FEEDER

By JIM THOMSON
Ass't Editor, IAA RECORD

This is the 11th of a series of articles to further acquaint you with the men who represent you on the Illinois Agricultural Association board of directors.

• • •

FOUR trips around the world — 100,000 miles — would involve quite a bit of travel. That's the distance Otto Steffey of Henderson county figures he has covered going to and from IAA meetings during the 14 years he has been a member of the board of directors.

Steffey has represented the counties of Rock Island, Mercer, Warren, Henderson, Hancock, and McDonough on the Illinois Agricultural Association board of directors since 1933, and has served as chairman of the organization-information committee of the IAA since 1937.

Though he is one of the oldest members of the board in point of service, Steffey's youthful enthusiasm for his work with Farm Bureau labels him as one of the youngest men on the board.

He has the lean muscular look of a busy farmer or a well-conditioned athlete. Because next to farming, the IAA director from the 14th congressional district likes to spend his time at the playing field or on the bank of a stream or lake where he can do some fishing.

Love of sport makes Steffey a natural to take charge of the Illinois Farm Sports Festival on which he has served as chairman since the war ended.

He was one of a small group of men who conceived and developed the "Sports Festival Idea." The thought behind the movement was that when young people have learned to play together, have learned to play hard but fair, have learned to take defeat with a smile, but with a determination to play better next time, they will develop a philosophy that will pay farm people big dividends in working together.

Born and reared on a farm near the village of Stronghurst, Steffey attended Stronghurst schools while helping with his father's dairy. During World War I, which was immediately after his graduation from high school, he worked on his father's farm.

The year following their marriage in 1919, Steffey and the former Ruth Davis of Stronghurst, bought a farm eight miles south of Lansing, Mich. During the year they farmed in Michigan, the Steffeys became charter members of the Ingham County Farm Bureau.

But their hearts were back in Illinois where they returned to buy the 160-acre farm on which Mrs. Steffey was born and reared. Mr. and Mrs. Steffey, incidentally, were born on the same day within an hour of each other. Their only child is a 17-year-old high school senior, Shirley Ann. Another daughter died in infancy 26 years ago.

In 1937 Director Steffey bought a 210-acre farm three-quarters of a mile from the home place. He operated both farms himself until a year ago when he went into a livestock share-lease agreement with his two hired men.

During his farming career Steffey has been interested chiefly in the raising and feeding of livestock. Annually he has averaged 100-200 beef cattle and 200 hogs. At present he maintains an Aberdeen-Angus breeding herd with a few Shorthorns and 250 Duroc hogs. He also has a small herd of 20 ewes and a few dairy cows for personal needs.

A shrewd manager, Steffey has kept farm account books for 22 years, the last several of which have been with the Farm Bureau-Farm Management Service. He especially appreciates the ac-

Director Steffey drills a hole through an angle iron on a wagon at his farm.

IAA Director Otto Steffey has kept farm account books (all shown above) on his farms for 22 successive years.

counts as a gauge of his ability as a farmer alongside that of his neighbors in similar circumstances. Nothing, he says, shows up your weaknesses and successes as a farmer better than the records compiled under the Farm Bureau-Farm Management Service.

Normally he puts about 120 acres of his land in corn, 60 in oats, 25 in alfalfa, 25 to 30 in soybeans and the rest in pasture and legumes. He generally follows a four year rotation plan — corn, corn, oats, and sweet clover, or corn, beans, oats, and legumes.

Last summer he planted all his crops on the contour after experimenting with contour cropping for three years. Both farms are under a five-year soil conservation plan as worked out by the soil conservation district.

All fields have been limed and all receive applications of manure at least once in four years. One third of Steffey's fields have received some rock phosphate. He has not yet applied any mixed fertilizers.

Steffey joined the Henderson County Farm Bureau in 1919 and took part in early membership drives. Always active in sports, Director Steffey played on the Farm Bureau baseball team for several years and was on Henderson county teams which twice went to the state Farm Bureau finals only to lose, however, to the state champions.

Besides serving 20 years on his County Farm Bureau board, Steffey served as its secretary a number of years. He helped organize one of the first service companies and was secretary of a three-county service company composed of Henderson, Warren and Mercer counties until they disbanded and formed their own companies. He then served as secretary of the Henderson county service company.

He is a charter member and organizer of the Monmouth Production Credit Association and has served as its president the past decade. He was president of the old county livestock shipping association for 15 years and is now president of its successor, the Henderson Livestock Marketing Association.

Steffey was school trustee 15 years and is secretary of the Illinois Western Grain Company board. Conscientious about his responsibility to the farmers who elected him to represent them, Steffey has never missed a board meeting, and has attended 166 consecutive sessions. He has served two years on the Illinois Farm Supply board of directors, and is a member of the live-

Corn in Henderson county and vicinity was good this year. Steffey samples the crop on his farm.

stock committee of the American Farm Bureau Federation.

The IAA director from the 14th district also has served on the Henderson county fair board. He is a member of the Elks Club in Monmouth, belongs to the Masons and is a member of the Methodist church.

While on the IAA board, Steffey has watched Farm Bureau membership grow from 42,000 to 145,000. He feels pretty strongly about the importance of farmers sticking together. "Farmers," he said, "must present a united front. They have no other alternative to meet the organized strength of other groups on the same footing. Through the years I have seen our organization get results because we have spoken with one voice in making our wishes known."

SHORTS IN THE NEWS

Farm Adviser Ray T. Nicholas of Lake county is $2200 richer these days after taking second place in the commercial welding classification of the Lincoln Arc Welding Foundation $200,000 Design for Progress award program. Last year Nicholas won $2600 in the same contest. Nicholas graduated from the University of Wisconsin College of Agriculture in 1930 and has worked in Peoria county and Schuyler county. He is married and has two daughters.

The National Federation of Bee Keepers Association will meet January 15-16 at Salt Lake City.

Elbert Elsbury, Gurnee, Lake county, has been elected first president of the newly organized Illinois Dairy Breeding Federation. The group represents the three artificial breeding associations now operating in Illinois and is one of the first such organizations in the country that is aimed to advance the dairy industry of the state.

John G. Waggoner, Mgr. of the Coles-Moultrie Electric Cooperative asks farmers to help police their power lines to prevent vandals from shooting at glass or porcelain insulators.

John R. Gilkey, Macon county Farm Adviser since 1933, has resigned effective December 31. During Gilkey's tenure, Macon County Farm Bureau became the first county organization in the United States to establish a farm safety program, and Farm Bureau membership grew from 300 to 2300 families. Gilkey is a native of Edgar county and graduate of the University of Illinois. He was a farm adviser in Indiana and Ohio before going to Macon county.

Winnebago Farm Adviser H. R. Brunnemeyer has been named to the Rockford Chamber of Commerce board of directors.

The Illinois State Vegetable Growers Association will hold its annual meeting in East St. Louis, Dec. 11-12, with the St. Clair-Madison-Monroe County Vegetable Growers Association as host.

FARMERS VISIT HUNGRY EUROPE

A member of the group of 26 Iowa farmers and newspapermen who made a tour of Europe at their own expense to study food conditions, Art Meyer, (standing) manager of the Prairie Farms Creamery at Moline, tells members of the Prairie Farms board in Chicago about his trip.

"IF WE CAN stave off communism by sending food to Europe it will be worth every cent of the expense." This was the opinion expressed by Arthur Meyer, manager of the Prairie Farms Creamery of Moline, on his return with 26 Iowa farmers and newsmen from a 30-day trip through eight countries.

In offering this opinion, Meyer said he believed he was expressing the feeling of the group as a whole. "We realize, however," he said, " that our 30-day trip was only a keyhole view of the European economic and political situation, but you couldn't be there long and not come away with some strong impressions."

The Midwestern farmers were especially interested in the drastic controls over German farming. Meyer said a German farmer couldn't drink his own milk. He had to turn it over to the state.

Meyer said one of the Iowa farmers stayed for a few days with German relatives and was served barley bread, boiled potatoes with no fats, oils or vegetables. The night meal consisted of warmed up potatoes.

He said the American farmers were impressed with changes in conditions between European countries. The people in the low countries have rolled up their sleeves and are back on the job. The German people are floundering around not knowing which way to turn. Conditions are better in England than either France and Germany, but the people of England feel that they must depend on themselves instead of America.

HOGS FOR TOMORROW'S *Market*

By LEW REISNER
Field Editor, IAA RECORD

SMALL herds of Minnesota No. 1's being established on Illinois farms will soon give farmers a chance to see this new breed of hog that is causing such lively comment.

They will be able to see that the Minnesota No. 1 is longer bodied and shorter of leg, and has larger ears and a longer snout than most American breeds.

The gilt and boar show a full ham, light shoulder, a fullness in the flank and a neat, trim underline characteristic of the breed. It is basically red but may have some black spots or specks.

A. K. Hohenboken of Geneseo, a prominent Henry county Farm Bureau member, has some of these Minnesota No. 1's which stem from foundation stock developed at the University of Minnesota.

Everyone who sees these hogs makes the remark that here is a new type of bacon hog, long on hams and short on fat. This is true and important for the days ahead when lard becomes even more of a drug on the market than it is now.

But these hogs, developed from inbred strains, have other advantages equally important, particularly their ability to gain quickly on relatively small amounts of feed as claimed by the man who directed their breeding, Dr. L. M. Winters, geneticist at the University of Minnesota.

The hogs are founded on a cross between the Tamworth and Danish Landrace breeds, both bacon types used commonly in Canada and Denmark. The first cross was produced in 1937. The crossbred stock was then bred within the family (inbred) and only the best individuals saved.

Although the inbreeding has been mild and the hogs are not hybrids, Winters says that the strain, now in its 10th year, carries about three times as much inbreeding as most registered swine.

Progeny were picked as breeding stock on the basis of five factors — fertility, survival, rate of gain, economy of gain, and body conformation that yields more of the higher priced cuts of pork.

Results show that the ancestral traits were well selected. Consider each of the five factors in which the geneticists were most interested.

Fertility has been high as indicated by a nine year average of 9.2 pigs per sow born alive. Survival of pigs born has been equally satisfactory. On the Hohenboken farm three sows had just farrowed 24 pigs and all 24 had been saved. They were thrifty and vigorous pigs.

Their rate of growth and economy of gain have been remarkable. During the nine year period of 1937-46 the hogs reached a market weight of 211 pounds in 168 days, or 5½ months, on 313 pounds of feed for each 100 pounds of gain.

These feed and rate of gain figures are worth remembering. Most farmers today do well to market under the best of conditions at a weight of 200 pounds in 180 days, or six months, feeding at least 332 pounds of feed for each 100 pounds of gain.

The merit of the product, or body form, has more than pleased the swine breeders, and carcasses are of increasing interest to packers.

Dr. Winters says: "When the carcasses are cut packers have been pleased with the length of belly (bacon) and loin, two valuable cuts. The bacon is heavily stripped with lean.

"The quality of the belly cut is high, the amount of fat low. The skin is thin

RURAL YOUTH

By ELLSWORTH D. LYON, Director

Young People's Activities

ALTHOUGH the State Rural Youth Talk Fest will have taken place before this issue of the IAA Record reaches the readers, the District Talk Fests deserve special mention. They were outstanding this year. New records were set both in numbers of individual participation and in counties represented. There were 132 speakers representing 59 counties, while 829 speakers entered the county Talk Fests. Quality was not sacrified for quantity. One of the usual remarks heard throughout the state was, "This is the best Talk Fest I've ever heard in this district." Another word of commendation was, "In these Talk Fests the young people show unusual ability in the treatment of material dealing with the problem of the farm and home."

E. D. Lyon, (right), IAA youth activities director, congratulates the winner and runnersup in the Vandalia district talk fest. L. to R.: Glen Meffert, Madison; Earl Moeller Effingham; Ethel Knebel, Madison; and Winner Ruby Viere, Madison.

As usual in the district Talk Fests the talkers rated one another. In the rating of speeches there was every evidence of fair play. The festival spirit was always above any desire to beat the other speakers. Yet, there was the strongly expressed desire as shown through effort on the part of all participants to present good discussions.

Skilled Driver Contests

The Talk Fests were linked with the Rural Youth Skilled Driver Contests this year, the driving activities being scheduled for the afternoons. Two Skilled Driver winners were also top-notch speakers. They were Ray Eichelberger, CHAMPAIGN, and Mary Holmes, PIKE. The other top-notch speakers going to the state Talk Fest were as follows: Marion Clark, RICHLAND; Maxine Roosevelt, EDWARDS; Kathleen Coleman, WILLIAMSON; Elizabeth Cunningham, PERRY; Ruby Viere, MADISON; Ethel Knebel, MADISON; George Lewis, BROWN; Leon Anderson, IROQUOIS; Lyle Schertz, WOODFORD, John Fisher, MERCER; Vern Schertz, TAZEWELL; Robert Betzelberger, TAZEWELL; Gavin Cross, OGLE; Walter Lambert, DEKALB; Bill Mason, LASALLE; Edward Meyer, KANE. Rural Youth District Skilled Driver winners were the following: Val B. Neal, HAMILTON; Glen R. Hanning SCHUYLER; Albert F. Henne, KENDALL; Robert M. Carter, WINNEBAGO; Loretta Schneider, JACKSON; Leroy E. Klueter, MADISON; J. Robert Young, HENRY.

TAZEWELL heard one of its former members, Dick Herm, who spoke at the Sept. 25 meeting. Herm is employed by the Peoria Producers.

Seventy LIVINGSTON Rural Youthers assembled Oct. 22 in the Farm Bureau assembly room to hear Burnell Phillips, local attorney, speak on "Life in New Zealand," in which he told of customs and traits of the natives of that country. He stated that he liked New Zealand a great deal. Phillips was a Lt. commander in the U. S. Navy and was stationed there two years.

W. W. Whitlock (left), IAA director of public health and safety, describes with appropriate gestures the first place trophy for the skilled driver winner in the state contest at St. Louis. Group included district contestants in both the driving contest and the Rural Youth talk fest at Champaign.

Rural Youth Homecoming

McDONOUGH invited all former members, including the 31 who married in 1947, to the Rural Youth homecoming held Oct. 24. In spite of graduations, a strong membership is going forward into 1948 with a substantial program putting educational features into each month from November through April.

WILL is on the beam in sending delegates to district and state-wide activities. In October, Dorothea Eienbrandt and Olive McGowan were placed in charge of county plans for county activities for the music and drama festival for Farm and Home Week coming in February.

ST. CLAIR'S Annual Banquet, Oct. 5, was addressed by Arnold Murray, Kaskaskia Boy Scout Council. His theme, "Acres of Diamonds," emphasized the old truth that the grass is as green in your own front yard as anywhere else. This live-wire group has a flying start on the three-act comedy "Damsel in Distress," to be given in January.

JACKSON gave a barbecue and provided entertainment to over 500 people at the county new member meeting on Sept. 29. During the summer, representatives of Rural Youth entertained veterans at the Marion hospital, helped with a variety show at Vergennes to raise money for their war memorial, and assisted with the Rural Youth program for parents' night.

On Oct. 25 Tazewell's president Paul Chaffer and Eunice Huette were married. The wedding reception was held at the home of the bride's parents at Tremont, and was attended by Rural Youthers.

Program Planning

Early in November STEPHENSON and McDONOUGH counties each planned a series of programs with much variety. The themes for the months from November to May were as follows: STEPHENSON — Nov. 25, School Reorganization, Report of IAA Annual Meeting, Bob Heilman. Dec. 16 — Christmas party, How We Celebrate Christmas in Our Family. Jan. 27 — Parents' Night, Animal Health and Human Welfare, Dr. C. Don Van Houweling, director, veterinary medical relations, IAA. Feb. 24 — Report on Farm and Home Week, Fire Prevention, box social. March 23 — Annual Banquet. April 27 — Family Financing, I. E. Parett, secretary, division of general services, IAA. May 25 — Crime Does Not Pay. McDONOUGH, usually holding two meetings each month, planned as follows: Nov. 20 — Dance. Dec. 5 — Home Safety, trip to fire house and skating party. Dec. 19 — Christmas Party (skit on ettiquette). Jan. 9 — Election of Officers, Soil Testing and Fertility. Jan. 24 — Banquet, speaker to be chosen. Feb. 13 — Valentine party and movie — parents' night, report on farm and home week, by Rural Youthers and Parents. Feb. 27 — Leap year party and Box social. March 12 — Court house trip, new textiles and their care. March 26 — Insurance, Ellery Leefers — General Discussion. April 9 — Treasure Hunt, Record or Movie. April 23 — Wiener roast and hay rack ride. May 14 — Senior night. Recreation and dance, short talks from boy and girl, "What I Get Out of Rural Youth."

This attractive shot of a tow of river barges moving along the Illinois river was made by Harvey Palmer of Bureau county. Much Illinois grain is moved by this transportation.

Green hay was blamed for this fire which destroyed barn of the Southern Illinois Breeding Association at Breese last September. Picture was sent in by Virgil Niebur.

RURAL YOUTH

By ELLSWORTH D. LYON, Director

Young People's Activities

ALTHOUGH the State Rural Youth Talk Fest will have taken place before this issue of the IAA Record reaches the readers, the District Talk Fests deserve special mention. They were outstanding this year. New records were set both in numbers of individual participation and in counties represented. There were 152 speakers representing 59 counties, while 829 speakers entered the county Talk Fests. Quality was not sacrified for quantity. One of the usual remarks heard throughout the state was, "This is the best Talk Fest I've ever heard in this district." Another word of commendation was, "In these Talk Fests the young people show unusual ability in the treatment of material dealing with the problem of the farm and home."

E. D. Lyon, (right), IAA youth activities director, congratulates the winner and runnersup in the Vandalia district talk fest. L. to R.: Glen Meffert, Madison; Earl Moeller Effingham; Ethel Knebel, Madison; and Winner Ruby Viere, Madison.

As usual in the district Talk Fests the talkers rated one another. In the rating of speeches there was every evidence of fair play. The festival spirit was always above any desire to beat the other speakers. Yet, there was the strongly expressed desire as shown through effort on the part of all participants to present good discussions.

Skilled Driver Contests

HAY and SILAGE MAKE BEEF TOO!

TACKLING the problem of saving grain to feed hungry Europe, feedlot and college experts recently came up with ways to make a profitable gain on cattle and hogs, and still go easy on the feed bin.

Their ideas, suggestions, and experiences were related before more than 1000 seasoned cattlemen during sessions of the 19th cattle feeders meeting held last month at the College of Agriculture in Urbana.

A good over-all program that would fit any livestock farm was offered by Dr. L. E. Card, new head of the department of animal science.

Card urged that hogs be marketed at lighter weights. He indicated that this would probably save more grain than any other measure farmers can now effect.

Use Grain Sparingly

"If all hogs were marketed at the 1937-41 pre-war average weight of 237 pounds, or 20 pounds under the 1946-47 average," Card said, "the saving in grain would amount to about 140,000,000 bushels.

"And we would like to see all the grain now going into hogs, chickens and turkeys properly supplemented with the right amounts of protein, vitamins and minerals."

He asked that all cattlemen make the maximum use of hay and other roughages where there is a plentiful supply, and to make maximum use of late fall and early spring pastures without overgrazing.

For the cattlemen Card urged feeding fewer beef cattle to "choice," a grade for highly finished cattle. The three common grades are commercial, good, and choice.

"It has been estimated," Card said, "that 60 million bushels of corn and 85,000 tons of by-product feeds are used to fatten cattle beyond the good slaughter grade."

And anyway, it was explained, Midwestern farmers who provide the nation with most of its choice grades of beef are like the cobbler whose children go barefoot. Choice beef is shipped over Illinois counters to the folks who produce it. It is a luxury item that moves East for resale to hotels and cafes.

A timely experiment recently concluded by the College of Agriculture and related to feeding out steers through the three common market grades, was made public during the meeting.

It involved three lots of 15 steers. The results backed Dr. Card's plea to save grain by marketing steers as commercials or goods and without a high degree of finish.

The steers, fed on drylot, were finished to commercial, good, and choice slaughter grades. The commercial lot with the smallest degree of finish took very little grain, were ready for market after a short feed, gained rapidly, and dressed out plenty of top quality meat, as the following results of the feedlot tests would indicate.

Amount of corn needed per steer were: commercial lot, 15.6 bu.; good [illegible]; choice lot, 45.7. Days to [illegible] commercial, 95; good, 147; [illegible]08.

[illegible] farmers who normally rely [illegible] roughage and less on grain [illegible]ttle program, addressed the [illegible]ers during the afternoon session.

[illegible]ed Meers, who farms west of [illegible]er in Champaign county, in a short [illegible] before the cattlemen said that on [illegible] own farm he relies heavily on roughages in his cattle feeding program.

"Although it takes me longer to get a steer ready for market on pasture," Meers related, "it makes me the most money. It takes less corn, bedding, and labor, and it puts the manure right on the field."

Lorin Clark, another Champaign county cattleman from Homer, is also a believer in roughages. He depends more on hay and pasture for his cattle program than he does on grain.

"If you've got a good pasture program, you'll be safe over the long pull even though the market on cattle does go up or down severely."

Cattle Feeding Popular

"We use legumes to build our land and steers to harvest the legumes," Clark said. Grain is used these days of high prices only to put on a short finish.

"This winter we'll probably feed 16 bushels of corn, all in the silage, before we turn out about May 10." He was gratified to learn, he said, that the yellow fat of grass fed cattle, often discriminated against in butcher shops, was actually highly nutritious and was colored by carotin, a carrier of Vitamin D. This would convince more housewives, he indicated, of the value of grain fed cattle if it were brought to their attention.

NEWS and VIEWS

Rural Youth Take Exams To Improve Driving Skills

ILLINOIS Rural Youth has challenged nation-wide traffic records by participating in its own skilled driver program. Statistics show that their age group is the foremost traffic offender in the nation, but Illinois farm youth are demonstrating their desire to better the record.

Most of the Illinois Rural Youth groups during the year have had at least one meeting devoted to the study of safety, while 40 counties have gone further in this project by taking the IAA safety department's skilled driver short course. This has been followed up with county and district contests preceding the selection of a state champion skilled driver at the IAA annual meeting.

The written county exams, based on the IAA Safety Course and emphasizing traffic regulations, statistics, and knowledge of car and roads, advanced high scorers on to district competition.

Seventy-two Rural Youth then participated in nine district driving performance contests last month. The actual tests, co-sponsored by the IAA safety department and department of young people's activities, were conducted by officers of the traffic safety section of the Illinois highway police who judged each participant not only on his ability at skillful driving, but on courtesy, attitude, and knowledge of traffic regulations as well. The nine district winners were scheduled to compete in the state contest at the IAA annual meeting in St. Louis.

In recognition of their good work, 1500 participants in the skilled driver short course have been awarded certificates of merit, while those scoring highest in county contests are being presented engraved mechanical pencils.

MRS. SCHILF RESIGNS

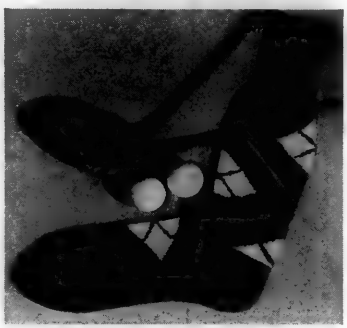
Mrs. Edward A. Schilf of Edgar county, has resigned as publicity chairman of the Illinois Home Bureau Federation. She was named chairman more than a year ago. Until a new chairman is selected, home bureau news items should be addressed to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

NEW REPORTER

The new publicity chairman for the Ogle County Home Bureau is Mrs. Hal Campbell, Stillman Valley, Ill.

Above is a group attending the district skilled drivers contest at Jacksonville in October. Holding placard at right is W. W. Whitlock, IAA director of safety and public health. State policeman is Earl S. Stroup, who assisted in conducting the examination.

ARGYLE SOCKS



Next to a birdie, the dearest thing to a golfer's heart is a pair of argyle socks. Hand knit socks have the added advantage of long wear and excellent fit. Colors can be combined to suit individual taste. This handsome plaid pattern is made of three colors in a non-shrink sturdy wool. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

Circular Will Show How to Freeze Food

A NEW circular, "Freezing Cooked and Prepared Foods," is now on the University of Illinois presses. The circular, which gives directions for freezing baked foods and combination dishes, is the result of tests made at the University's College of Agriculture foods research laboratory.

"Foods frozen in this way are ready to serve after only a little more work," say the authors, Royene F. Owen, Jean T. Chase and Frances O. VanDuyne. "They greatly simplify the problem of preparing an appetizing meal when time is short, when unexpected guests arrive or when skilled hands are not available."

The circular contains one section on combination dishes with recipes for freezing such foods as chicken a la king and beef or veal stew. There are also directions for freezing various kinds of cakes, pies and yeast rolls.

for HOMEMAKERS

Will Co. Lays Next Year's Plans

MANY interesting and instructive plans are in the making for the various Home Bureau units in Will county for the ensuing year. The executive board met recently in the confernce room of the Farm Bureau building with Mrs. Phil Goodwin, chairman. Routine reports were given and Mrs. Clarence Castle, home adviser, gave a compilation of the work she has accomplished this past month and projects that have been completed.

She led a discussion recently at the University of Illinois on "How can we better meet the needs of our rural people?" She attended the health department tour recently and took part in the recent Rural Youth Talk Fest. Members of the board were in accord with the fact that the local units should stand behind the 4-H Club program and give aid when needed.

Mrs. Harvey Lewis, 4-H and Rural Youth, announced that the County Achievement Day would be held Saturday at the Cunningham school and many awards will be made at that time. Mrs. William Morrison, Recreational Chairman is sending each unit material to be used during the holiday season.

Mrs. Alfred Krapf, vice-chairman and membership chairman outlined the policies and plans for the future work this year in obtaining new members so that the county goal of over 100 new members will be met. This report is being sent to Mrs. Dale Huffman, who is the state membership chairman. It was decided that 50 4-H Club members could be accommodated next year at Camp Shaw-waw-nas-see near Rock Creek.

SLEEVELESS SLIPON

A sleeveless slipon sweater is always a favorite from the masculine point of view. This style will get the warm approval of the men who will wear them. For free instructions send a self addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

KNITTED GIFT SET

If you're a handy girl with needles you can stretch your budget considerably when making gifts for the family. Extra warm mittens and a tasseled stocking cap are sure-to-please gifts. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricutural Association Record, 43 East Ohio Street, Chicago 11, Ill.

FAVORITE HOLIDAY RECIPE

RAISIN-BRAN LOAF

1 cup bran
2 cups flour
1½ tspns. soda
1 tsp. baking powder
1 teaspoon salt
1 cup chopped raisins
½ cup molasses
1½ cups buttermilk or sour milk*
3 tblspns. melted fat
2 eggs, beaten

Mix dry ingredients and add raisins. Mix molasses, buttermilk and fat. Add eggs. Combine two mixtures and mix thoroughly. Turn into loaf pan which has been lined with waxed paper and bake in a moderate oven (350° F.) for 45 minutes or until done.

*To make sour milk:
Put 3 tablespoons vinegar or lemon juice in 1⅓ cups milk. Let stand a few minutes before using.

IT'S THE HEAT!

HOME-CANNED foods do not lose flavor and color because of exposure to light, say members of the Massachusetts experiment station. Their recent research on the subject has exploded the long-favored theory that light damages color and flavor of canned food during storage.

Heat, say the scientists, is the real cause. Heat speeds up oxidation—the action of air trapped in the can or jar of food—and oxidation is what cause the color and flavor to deteriorate.

In the tests home-canned food was stored both in the dark at room temperature and in the light at room temperature. All of it showed a loss of flavor and color. When canned foods were stored at 42 degrees Fahrenheit, both of these qualities were well maintained.

SWINE BRUCELLOSIS

(*Continued from page 9*)

If you discover you have the disease in your herd you have three choices of procedure to follow.

1. You can sell out your breeding stock and buy replacements. The objection I see to this is that, unless you can buy from a clean herd, how do you know you've improved your situation any?

2. You can test your pigs at weaning age, remove reactors, and isolate them from the adult breeding animals. These pigs should be tested again and even twice before breeding if the second test reveals some infection. Then be sure you get a non-infected boar and you should get along fine. Premises that have had infected hogs on them should be safe after three or four months of summer weather — slightly longer for fall and winter weather. Moisture and freezing are conducive to the life of these germs. Sheds should be thoroughly cleaned and disinfected when the infected hogs are removed.

MINNESOTA NO. 1's

(*Continued from page 19*)

and the bone light. Yield and quality of the ham have been high.

Recently the Detroit Packing Company, only large cooperative packing plant in the Midwest, bought 24 boars and 25 gilts for foundation stock to distribute among their farmer patrons.

Carcass quality permits the Michigan cooperative to pay a premium of 25 cents a hundred for hogs raised from this stock.

Is it possible that these hogs might reopen the discussion, which packers have never promoted, of buying live hogs on a dressed or carcass basis?

The numbers of Minnesota No. 1's have spread most rapidly by the purchase of boars. A number have been released to farmers for top crossing on other breeds. Dr. Winters says he has personally observed 6000 of these first crosses and farmers, by and large, have been well pleased with the results.

"In every case the Minnesota No. 1 has stamped his type on the progeny and has added something to the cross not found in other crosses," Dr. Winters says.

"A good deal of hybrid vigor results from the cross. The fact that they differ more in genetic background from other breeds than the breeds differ from each other (because of their inbreeding) will account for this."

This fall Hohenboken went to the first excess sale held by the University of Minnesota and reported that the boars and open gilts sold for an average of $224.

The University added something new to hog sales by including the rate of production record (ROP) of the litter from which the hogs were sold.

A typical gilt that sold for $230 was farrowed March 12 and on Sept. 6, the sale date, weighed 184 pounds. Her ROP record showed that there were 10 pigs in the litter which were fed 243 pounds for each 100 pounds of gain.

Hohenboken is one of about 20 Minnesota No. 1 breeders in Illinois. This fall he had a foundation herd of one boar, four sows, and 24 fall pigs.

He has a breeder's pride in this new type of hog which he admitted looked at first a little strange to him. He has an answer, though, to the unbelievers. Farmers, he says, are snapping up his boar pigs as soon as they are old enough to wean.

Earl Wenzel holds dressed turkey stored in his walk-in home locker. He keeps a few dressed birds on hand.

TURKEYS BY TON

(*Continued from Page 9*)

member of the DeKalb county and State Farm Bureau Locker Board and is on the National Frozen Food Locker Association board.

That beautiful bird that Mom has set aside for Christmas dinner started out, if it came from Wenzel's, as a pretty speckled egg, laid by any one of their 1000-hen parent flock along about the last of January.

The egg went into a large incubator with 12,000 other turkey eggs on Feb. 27. The baby poult pecked out of his shell four weeks later and joined the others in the large brooder house where he enjoyed the warmth of a stove and rays of the winter's sun from the confines of a wire sun porch.

Just Fit To Kill

He was put on the turkey alfalfa range on May 25. There the leggy poult took life easy, looked for bugs and grasshoppers. When the weather got hot he joined his buddies in a water drinking marathon, doing his part to down 3,000 gallons a day.

Came a good cold snap, and that growing mash and oats didn't taste quite good enough for Mr. Dandy Gobbler. Yellow corn, that's the stuff.

Of course a young gent eating corn maybe fleshes up a bit. But it adds to his looks, doesn't it? It makes him, you might say, mighty gay and frisky. Just fit to kill, as the saying goes.

Just fit to kill.

12-GRADE DISTRICT

(*Continued from page 10*)

ly because they are the most outstanding school men in their communities. In the future, we can expect to have more school superintendents better trained than at present in both elementary and high school administration.

A question often asked is, how do we know that the unit system is the best? The answer is that the experience in other states, as well as the various studies made in this state, all point to the superiority, educationally and financially, of the unit district.

We must remember, however, that many high school principals have had courses in elementary education and past experience in elementary school administration. It would be up to the parents of more than 70 per cent of the public school children in the elementary school in any given community to see that such former high school principal, on becoming superintendent, does place equal emphasis on all 12 grades.

HAY MAKES BEEF

(*Continued from page 22*)

He made the interesting observation that he figures the corn he feeds is paid for by the increased fertility from having the cattle. This way, he says, he gets a very high rental for his pastures.

He starts feeding silage about the middle of December, or after the weather changes. They graze old and new seeding throughout November, and do not fall plow, giving cattle a chance to pasture at least an extra month.

They have the best results, he said, with a timothy, clover, alfalfa pasture, with a fairly high amount of timothy, a grass he described as highly palatable and less likely to bloat cattle.

Santa's pack is fullest when daddy's cribs are full and his stock fat. In helping protect the property and earnings of many thousands of Illinois Farm Bureau families, we thus play some small part in making this Holiday richer and fuller. To you and yours may we extend warmest wishes for a Merry Christmas and a happy and prosperous New Year.

The University added something new to hog sales by including the rate of production record (ROP) of the litter from which the hogs were sold.

A typical gilt that sold for $250 was farrowed March 17 and on Sept. 6, the sale date, weighed 180 pounds. Her ROP record showed that there were 10 pigs in the litter which were fed 243 pounds for each 100 pounds of gain.

Hohenboken is one of about 20 Minnesota No. 1 breeders in Illinois. This fall he had a foundation herd of one boar, four sows, and 24 fall pigs.

He has a breeder's pride in this new type of hog which he admitted looked a first a little strange to him. He has an answer, though, to the unbelievers. Farmers, he says, are snapping up his boar pigs as soon as they are old enough to wean.

Earl Wenzel holds dressed turkey stored in his walk-in home locker. He keeps a few dressed birds on hand.

TURKEYS BY TON

(Continued from Page 1)

member of the DeKalb county and State Farm Bureau Locker Board and is on the National Frozen Food Locker Association board.

That beautiful bird that Mom has set aside for Christmas dinner started out, if it came from Wenzel's, as a pretty speckled egg, laid by any one of their 1000-hen parent flock along about the last of January.

The egg went into a large incubator with 12,000 other turkey eggs on Feb. 27. The baby poult pecked out of his shell four weeks later and joined the others in the large brooder house where he enjoyed the warmth of a stove and rays of the winter's sun from the confines of a wire sun porch.

Just Fit To Kill

He was put on the turkey alfalfa range on May 25. There the leggy poult took life easy, looked for bugs and grasshoppers. When the weather got hot he joined his buddies in a water drinking marathon, doing his part to down 3,000 gallons a day.

Came a good cold snap, and that growing mash and oats didn't taste quite good enough for Mr. Dandy Gobbler. Yellow corn, that's the stuff.

Of course a young gent eating corn maybe fleshes up a bit. But it adds to his looks, doesn't it? It makes him, you might say, mighty gay and frisky. Just fit to kill, as the saying goes.

Just fit to kill.

12-GRADE DISTRICT

(Continued from page 10)

ly because they are the most outstanding school men in their communities. In the future, we can expect to have more school superintendents better trained than at present in both elementary and high school administration.

A question often asked is, how do we know that the unit system is the best. The answer is that the experience of other states, as well as the various studies made in this state, all point to the superiority, educationally and financially, of the unit district.

We must remember, however, that many high school principals have had courses in elementary education and past experience in elementary school administration. It would be up to the parents of more than 70 per cent of the public school children in the elementary school in any given community to see that such former high school principal, on becoming superintendent, does place equal emphasis on all 12 grades.

HAY MAKES BEEF

(Continued from page 24)

He made the interesting observation that he figures the corn he feeds is paid for by the increased fertility from having the cattle. This way, he says, he gets a very high rental for his pastures.

He starts feeding silage about the middle of December, or after the weather changes. They graze old and new seeding throughout November, and do not fall plow, giving cattle a chance to pasture at least an extra month.

They have the best results, he said, with a timothy, clover, alfalfa pasture, with a fairly high amount of timothy, a grass he described as highly palatable and less likely to bloat cattle.

Santa's pack is fullest when daddy's cribs are full and his stock fat. In helping protect the property and earnings of many thousands of Illinois Farm Bureau families, we thus play some small part in making this Holiday richer and fuller. To you and yours may we extend warmest wishes for a Merry Christmas and a happy and prosperous New Year

Farmers Opposed to Return of Price Controls and

OPPOSITION of Illinois farmers to the return of price controls and rationing was strong enough at the Illinois Agricultural Association annual meeting to be heard in Washington. A newspaper in the nation's capital phoned for further details.

The 33rd annual meeting of the IAA attracted a crowd of 5,000 to St. Louis, one of the largest turnouts in the history of the organization.

While President Harry Truman was asking Congress for the return of controls, IAA President Charles B. Shuman was making it clear to Chicago and St. Louis newsmen that Illinois' 146,000 Farm Bureau families wanted no more wartime controls and black markets.

Crowds attending the general sessions of the four-day convention heard the IAA resolutions committee back President Shuman with a resolution which stated in part: "Experience after the end of the war demonstrates that the American people will not accept or support this type of regimentation in peacetime ..... We militantly oppose the reimposition of price controls and rationing."

As an alternative to the return of controls, President Shuman suggested in his annual report to the membership that one method of minimizing present price inflation would be for labor and industry to follow the abundant production practices of agriculture.

"The first and most important need," President Shuman said, "is for full production by all groups—industry, agriculture, and labor. Agriculture already has demonstrated its willingness to maintain production."

Despite their concern with controls and the numerous other difficulties that trouble farmers, the folks attending the St. Louis meeting were a high spirited crowd who had come to combine business with pleasure.

IAA Convention at St. Louis Makes Clear American People will not Stand for Regimentation in Peacetime

It's been a long time, back before the war, in fact, since farmers have felt in the mood to serenade townspeople with loud, lusty soie-eeeeee's.

The hog-calling accolade, a farm audience's highest expression of approval, was often in evidence during the general sessions as the membership voiced their approval of organization officers and policies.

Two questions of IAA policy brought before a special meeting of Farm Bureau presidents and farm advisers for their consideration and before the delegate body received a thorough examination on the floor. Both proposals were finally approved by the delegate body.

The first question provided that effective Jan. 1, 1948 associate members with a few exceptions, joining a county Farm Bureau with associate membership already exceeding 10 per cent of the total membership must wait one year after joining before they are entitled to the cooperative purchasing and insurance services of the IAA's associate companies.

Where the associate membership is less than 10 per cent of the county Farm Bureau membership, the new associate member is entitled to all privileges as before.

In an amendment to the proposal, a spirited effort was made to change it so that all new associate members would be required to wait one year before being entitled to the benefits and privileges of membership. The amendment was defeated.

The second question proposed that the Illinois Agricultural Association join with the Illinois Medical Association to help deserving young men complete their

. Schenck

medical educations provided they agree to return to rural areas to practice. (See separate story for details). The medical education proposal raised a barrage of questions, virtually all sympathetic with the idea and seeking information as to how the plan might affect the questioner's home county.

When the medical education plan was put to a vote of the delegate body, there were no votes cast against it.

For the first time in a number of years, there was no change in the make-

* * *

B. Shuman, Sullivan, and Vice President Floyd E. Morris also were re-elected.

During a discussion on rural road conditions at the meeting of Farm Bureau presidents and farm advisers, President Shuman asked for an expression of opinion on whether the time was ripe for the Illinois Agricultural Association to undergo a survey of rural roads under the direction of a State Rural Roads Survey Committee, much in the manner of the state committee which studied the rural school situation several years ago. Several speakers from the floor approved the idea.

Speaking on world rehabilitation in his annual address, President Shuman said: "Farmers are sympathetic with the program to relieve the extreme distress that is so widespread. However, they realize that a price structure based upon a charity program of exports of gift goods to foreign nations is unsound. . . Because of these convictions, farmers are interested in the development of some plan designed to rehabilitate the war-torn units of the world economy. Trade. not charity, could be a basis of economic recovery in the world."

President Shuman also reiterated his previous criticisms of wasteful duplication by government agencies in their soil conservation activities. "All of the government soil conservation activities,' he said, "should be combined under one agency."

The IAA president also looked with a critical eye on the high costs of distribution of farm products. "The total cost of marketing, processing, and distributing our products increases rapidly during inflationary cycles, but remains practically unchanged when prices fall," he said.

Copies of talks made at the general sessions of the IAA annual meeting by Shuman, Burch, O'Neal, Flanagan, and Schenck may be obtained by addressing the IAA RECORD, 43 East Ohio Street, Chicago 11, Illinois.

He pointed out that farm cooperatives can do a more effective job of buying and selling.

Other speakers on the general session program included Hassil E. Schenck, president of Indiana Farm Bureau; J. W. Burch, director of extension, University of Missouri; the Rev. Edward J. Flanagan of Boys Town, Neb.; and Edward A. O'Neal, president of the American Farm Bureau Federation.

During the IAA convention, President O'Neal held a press conference and was quoted by newsmen as saying that he planned to retire from the presidency of the AFBF and return to his farm in Alabama.

"The eyes of the world," O'Neal said, "are on the American farmer and his record as a food producer. I hope and trust that the reward for this achievement will not be ruinous surpluses. I would urge the planning of a long-range program before we are faced with an agricultural crisis. I condemn government by crisis.

"I don't believe the country will stand for controls," O'Neal said. Speaking on the Marshall plan, he announced his approval on principle but said he thought 100 good farm advisers in Europe would do just as much good.

Getting first look at the 1947 IAA annual reports as they were distributed in the lobby of the Municipal Auditorium in St. Louis are, l. to r.: Louis Hertel, St. Clair county; Carl Guenther, Bureau; L. E. Plumley, Bureau; Al Straeter, Clinton; Gus Sammons, Montgomery general agent; Ray Roll, Greene county; and S. M. Bechtel, Macoupin general agent.

Speaking fervently on his trip to Europe, Schenck said he was "appalled at the inefficiency of German agriculture especially when you compare it with the efficiency of German industry and the German army."

Lacking machinery, Schenck said European farm practices are far behind those of the United States. In England, for instance, he said, an equivalent farm with six workers has only two in the U. S. In Germany, he said, farm land has been cut up into such small strips that farming on the efficient American scale is just out of the question.

Speaking on his experiences with boys, the Rev. Flanagan said: "Few farm boys are forgotten or neglected and few are at Boys Town. We build character in the boys by heaping love and responsibility upon them. Their greatest punishment, the one city boys feel most keenly, is to deny them the pleasure of doing their farm chores.

Illustrating his belief that no boy is inherently bad, he traced the behavior of a boy who at first appeared hopelessly bad but later developed into a worthwhile citizen because his teachers had faith in his good qualities.

Balanced Farming

Burch explained that balanced farming is just a dressed-up way of describing a packaged system embracing all good farming practices. This system, he said, was suggested by an operating farmer and has gained much headway in Missouri.

Some 15,000 Missouri farm families, he said, have enrolled in rings of 50 to a community at a cost of $50 for each family. The plan is drawn up by the farmer, his wife, and with such help from the farm adviser or others as may be needed.

The entire farming operation is then blueprinted—soil conservation, labor and time saving, crop raising, stock handling and breeding, and home improvement. Technical details are furnished by experts from the college of agriculture.

After long hours of discussion and compromise, the 23-man IAA resolutions committee presented 17 resolutions for the endorsement of the delegate body in general session. All were approved.

Of immediate interest to Illinois farmers were resolutions dealing with schools, roads, animal disease control, sales tax diversion, etc.

The resolutions reaffirmed the IAA policy of encouraging the improvement of rural schools, and urged the preparation by the IAA, in cooperation with other groups, of legislation necessary for the solution of school problems. The

MEMBERSHIP Goal for '48 is set at 155,000

Seven top flight organization men get together at IAA convention, l. to r., back: C. H. Mills, Cook; George Heidemann, Jersey; A. B. Culp, McLean; Charles Webster, Will; front, A. L. Keim, Monroe; E. R. Keim, St. Clair, and Carl Cox, Franklin.

THE challenging goal of 155,000 Illinois farm families enrolled in Farm Bureau for 1948 was announced by O. D. Brissenden, state director of organization, as the Illinois Agricultural Association finished a year that has seen all membership records broken.

"Illinois with 145,851 members has the largest and most powerful state farm organization in the country. But we must not be content with this honor. Let's keep her strong with 10,000 more."

This is the message Brissenden relayed during the IAA annual convention in St. Louis as he praised the "enviable" record of county organization directors and "those thousands of volunteers who have gone out year after year."

By breaking all records and for reaching goals set for their county, 92 county organization directors were honored in a mass ceremony during the first general session of the annual convention.

More than 3,000 farm leaders filled the large assembly hall to overflowing and cheered as the organization men received their certificate of awards from George E. Metzger, IAA field secretary.

For the first time in the history of the Illinois Agricultural Association, every county in the state was honored for achieving its goal in membership.

Counties and organization directors singled out for special praise included Cook county and COD C. H. Mills for signing the largest number of new members, 754, and first in total net increase, 458.

At a special organization-information conference Brissenden announced the counties whose membership achievements had made them leaders in the state.

McLean county was second in both these classifications with 659 new members reported and a net gain of 450 in total membership. COD is A. B. Culp.

Jersey county, operating without a county organization director, reported the highest percentage of new member quota attained — 620 per cent. The quota was 40 and the number signed 248.

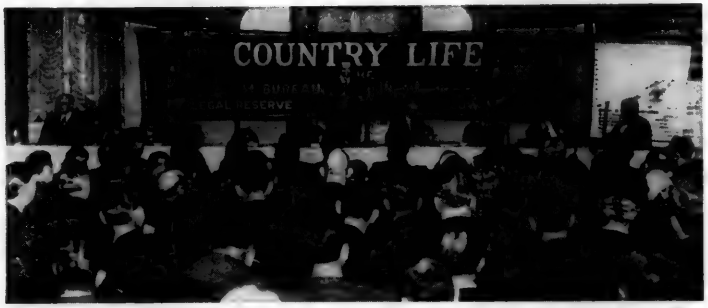
Will county with Charles Webster serving as county organization director was second on this basis with 549 per cent reported.

Franklin county with Carl Cox as county organization director was first on the basis of percentage net gain of total membership for the year. Membership at the beginning of the year stood at 500, and on Sept. 30, at 701, for a net gain of 40.2 per cent.

Johnson County Farm Bureau with H. L. Cummins as county organization director was a close second with a percentage increase of 38.3 per cent.

District I with H. B. Claar as director of organization, reported 10,126 new members; District II, with L. B. Hornbeck as director, reported 8,077, District III, with J. C. Moore in charge until Jan. 31, 1947, and John C. Howlett for the balance of the year, reported 5,314 new members. District III comprises the Southern third of the state and showed the greatest net gain.

Ellsworth D. Lyon, IAA director of young people's activities, introduces the Rural Youth State committee at the organization and information conference. Left to right: Edna Dew, Ogle county; Glenn Niehaus, Montgomery; Rex Emory, McDonough; Lyle Schertz, alternate, Woodford; George Matthews, Whiteside, and Ruth Huser, Tazewell.



IAA President Charles B. Shuman addresses one of the insurance company conferences during the annual convention in St. Louis. Shuman also serves as president of Country Life Insurance Company and Country Mutual Casualty Company.

Country Companies SET NEW RECORDS *For Sales in 1947*

THE confidence with which Illinois farmers view the progress of the Country Companies seems to be the yeast that raises the dough. During the fiscal year ending Sept. 30, they bought more insurance from the Illinois Agricultural Association insurance companies than during any previous year in their history. According to A. E. Richardson, director of IAA Insurance Service, the record insurance sales are an indication of general farm prosperity, rising farm costs, and an awakened need to the value of insurance on farms.

From reports delivered at the annual meeting conferences in St. Louis, 1947 will go on the books of the Country Life Insurance Company, the Country Mutual Casualty Company, and the Country Mutual Fire Company as the banner year since their organization.

Country Life Insurance Company had $313,221,225 of life insurance in force at the end of the fiscal year. New business totaled $46,352,277, the highest in the company's 19 years of existence. In his message Manager A. E. Richardson attributed the tremendous increase to the fact that "Country Life Insurance Company is recognized more and more every year as being one of the outstanding low cost life insurance companies in the country today, and farmers have turned to life insurance more than ever as a means of helping them solve some of the tax problems which they did not have a few years ago." In the increase is also mirrored the great strides made by the agency force in an all-out effort to service all Farm Bureau members in their respective territories.

"To all policyholders," said Richardson, "I would say this: Country Life Insurance Company today is in just as good shape financially as it was when I took over last November. In fact it is a lot better, and the credit belongs to the many people who have worked hard to make it what it is today."

L. E. Lingenfelter

The Country Mutual Casualty Company also entered a star year on their records with 189,311 policies in force, and 39 per cent of all the farmer general and employees liability business put on the books in the last year. The complete picture is a company that is sound, progressive, growing — 6 2/3 million dollars in assets, and about two million dollars in surplus.

It offers to its policyholders protection at 40 per cent less than the nearest competitor in the casualty field. Although the low rate offered by the Casualty Company is determined by the cost of claims, frequency, underwriting expense, it was on the fourth factor, selection of risks, that Frank Wilcox, manager, placed emphasis for the low figures.

"Why are the rates as low as they are? Will they remain there? The farmer himself can answer the first question and thank himself that he is the reason for the low rates because he is a preferred risk, he is a select risk.

"Will they remain there? That can be answered in two ways. Are we going to mix the herd and have a hybrid, or are we going to develop an average of risk and apply it to the farmer in the place of the national averages now employed, which are not typical of rural people, and keep this service for every deserving farmer in the Farm Bureau in Illinois at cost."

Reflecting the tremendous increase in farm property values, Country Mutual Fire Company had $530,036,603 of fire, wind, and extended coverage in force at the end of their fiscal year. This was also their biggest year and was 13 per cent above that of 1946. During the year the company also wrote $148,000,000 of hail insurance on crops.

The interest on the part of members, stimulated by the tremendous increase in the value of property and in services, resulted in the number of applications topping that of last year by one-third, according to L. E. Lingenfelter, president. The increase was evident not only in number, but the activities of the various cooperatives in the state resulted in a greater diversity of kinds of property insured. As reported by Lingenfelter, the company has insured the elevator and other properties of the affiliates of the Illinois Agricultural Association, as well as the farm and residence properties of its members.

J. H. Kelker, manager, expressed his gratification at the surplus increase of $1,137,000 and the assets increase of $1,850,000 produced by the Fire Company this year. However, he advised, merely piling up the surplus is not the main purpose of the company. Rather, it is the rendering of greater service to more and more people. That the main purpose received its deserved precedence during 1947 was mirrored in the 55,000 call cards distributed to members for the Annual Meeting. This was an increase of 10,000 over 1946.

In order to render better service to holders of hail insurance policies, he explained, all contracts this year were written and issued in the local general agent's office. By this means the policies were placed in the hands of the insured within a very few days rather than having the applications sent to the Home Office and policies issued there. During 1947 approximately 32,000 policies were handled by the local offices, compared to the 28,000 policies issued during 1946.

Houghtby Resigns; Mason Is Named Dairy Dept. Head

E. E. HOUGHTBY, DeKalb county dairy farmer, has resigned as director of the dairy marketing department of the Illinois Agricultural Association effective Jan. 1. He will be succeeded by Judson P. Mason, 33, who has been assistant director in the department since September of 1946.

Houghtby was asked and agreed to serve the department during its reorganization period. He will return to his farm home near Shabbona in DeKalb county. Active in Farm Bureau affairs for many years, Houghtby was a member of the IAA board of directors from 1934 to 1943.

From 1945 until he started to work for the Illinois Agricultural Association, Mason was employed as an economist with the dairy branch of the U. S. Department of Agriculture in Washington.

Before going to Washington, Mason worked for three years as a statistician for the milk market administration in St. Louis.

Born on a dairy farm near Elgin, Mason was graduated from the University of Illinois College of Agriculture and then worked five years for the McLean County Milk Producers and the Prairie Farms Creamery of Bloomington.

I. E. Parett, IAA secretary of general services, explains the proposal in which the IAA in cooperation with the Illinois Medical Association would undertake to assist deserving young men to complete their medical educations provided they agreed to practice in rural areas. The proposal was approved by the IAA delegates. At table, L to r.: George Metzger, Paul Mathias, President Shuman and Vice President F. E. Morris.

IAA to Help Students Become Country Doctors

WITH an eye on the relatively poor health records of rural youth examined by the armed services during the war, voting delegates to the IAA annual meeting in St. Louis approved the establishment of a loan fund to help deserving students through medical school.

The fund is being set up in an effort to attract more doctors to rural areas and will be financed jointly with the Illinois Medical Society. First of the funds will be available to students in the fall of 1948.

Students eligible for the loans must have finished three years of their premedical work and must meet with the approval of their county Farm Bureau and their local medical society.

The fund would advance $1,000 annually over a period of five years to students admitted to recognized medical schools and who agree to return and practice general medicine in a town of less than 5,000 population until their loan has been repaid.

It provides for four students to be taken each year for a five year period starting next fall. Over a period of five years the plan should result in 20 doctors being added to rural areas. IAA officials pointed out that this is a trial program which may be expanded if results are encouraging.

Front Cover

OUR cover this month is a picture of the dinner given for delegates to the Illinois Agricultural Association annual meeting in St. Louis. The dinner was given for the first time this year to enable the delegates to get better acquainted.

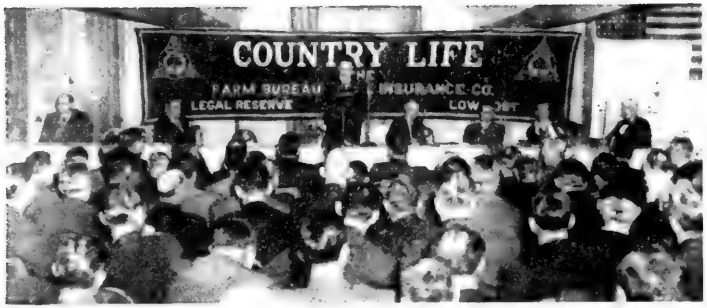
The IAA delegate body makes the final decision in matters of Illinois Agricultural Association policy. Through the delegate body the individual farmer is able to make his voice heard when important decisions affecting him are to be made.

Each county Farm Bureau president, who is elected by vote of the membership, automatically becomes a member of the IAA delegate body on his election. Each county Farm Bureau also is entitled to at least one delegate for membership up to 500 and additional delegates for each additional unit of 500 members or major fraction thereof.

The Farm Bureau membership banner, prominently displayed at every IAA annual meeting has been superimposed on the cover picture.

FARM AND HOME WEEK SCHEDULED FOR FEB. 9-14

Many organizations are planning to hold their annual meetings in connection with Farm and Home Week at the University of Illinois College of Agriculture, Feb. 9 to 13 at Urbana. Included in the list are Illinois Beekeepers association, Illinois Turkey Growers, Illinois Farm Managers and Rural Appraisers, and Illinois Crop Improvement Association.



IAA President Charles B. Shuman addresses one of the insurance company conferences during the annual convention in St. Louis. Shuman also serves as president of Country Life Insurance Company and Country Mutual Casualty Company.

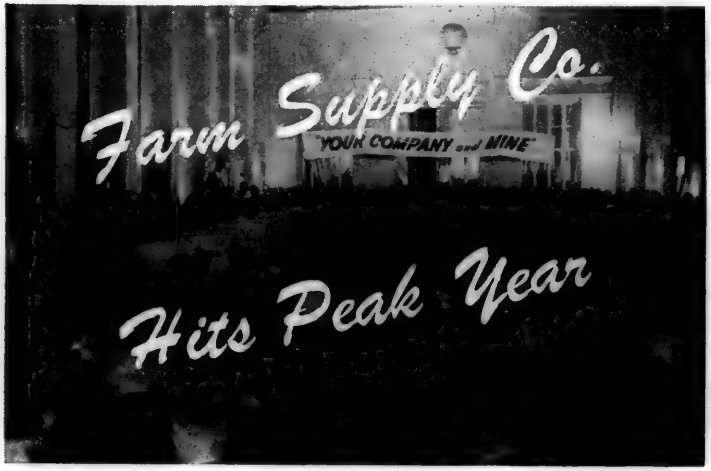
FARM AND HOME WEEK SCHEDULED FOR FEB. 9-14

[illegible]



Headline illustration shows the annual meeting of the Illinois Farm Supply Company in session during the IAA convention in St. Louis

★ ★ ★

"IT WAS the most successful year in our history," C. H. Becker, manager of Illinois Farm Supply Company, told the audience assembled for the company's annual meeting at the Statler Hotel in St. Louis, Nov. 18th. The Farm Supply meeting was held in conjunction with the annual convention of the Illinois Agricultural Association and Associated Companies.

"In round numbers," he reported, "total wholesale volume jumped from $21,000,000 to $31,000,000. Petroleum gallonage increased from 150 million to 171 million; fertilizer tonnage from 11,000 tons to 180,000 tons; feed from 45,000 to 64,000 tons."

According to Becker, Farm Supply's petroleum business increased about 28 million gallons during the four war years and in the two post-war years gains approximated 40 million gallons, culminating in a total this year of 171,146,650 gallons.

Manager Becker told of important events in the feed division during the year, chief among them the completion of the Benton feed mill which has an annual capacity of from 20,000 to 25,000 tons, and the purchase of the Mattoon elevator which guarantees a supply of quality corn to the Benton mill.

"It does not appear that we have insurmountable problems in the feed business," he advised the membership, "although naturally it will take several years to build a complete program. The important point is that we seem to be on our way."

In the plant food division, Becker reported that important plans had crystallized shortly after the company's fiscal closing. He referred to the purchase of a one million dollar phosphate reserve in southwestern Idaho by the Central Farmers' Fertilizer Company, a farmer cooperative wholesale organization of 15 Midwestern cooperatives, of which Illinois Farm Supply Company is a member. Other plans formulated during the year culminated in the authorization of a large phosphate acidulating and fertilizer mixing plant to be built at Fairmont City in St. Clair county, which will have a total annual capacity of 30,000 tons of mixed goods and 20,000 tons of superphosphate.

"One hundred and three Class "A" member companies and 58 other Farm Bureau cooperative organizations were served throughout the year," Becker said.

"The cooperative is the farmer's only logical answer, and those who view with alarm the rate at which farmers' cooperatives are displacing private, small business had better take another look. They had better look and see what kind of an America they are living in today. We are living in a nation, not of small individual enterprise, but of economic giants. Small business, as we know it today, is largely confined to local services and as agencies or appendages of big business. As a part of this trend the organizations of labor and government have grown equally large and powerful.

"There is no need to fear this America of today. No such combination before it ever has produced so bountifully. The one danger, of course, is monopoly, and the antidote for monopoly is competition. No one believes with more conviction nor practices with more diligence the principle of free enterprise than the American farmer. His cooperative organizations are his way of meeting the challenges of this age of organizations. He knows very well what he is doing, and there seems little likelihood of his changing his course.

"We who serve as directors, officials, and employes should consider seriously and carefully the enormous responsibilities placed upon us by farm people. It is all too easy for us to get "off the beam" . . . . to mistake rules and regulations for objectives . . . . to place undue emphasis on volume, on earnings, on the procedure of organization.

"During the coming months important decisions must be made. We must not consider them lightly. Even though we are successful in bringing out the best thought in the organization, no one can know what is exactly right. Our de-

IAA Plays Host At Traditional 4-H Club Banquet

A TURKEY dinner with all the trimmings, party favors, good entertainment, and a few short, snappy talks combined to make the Illinois Agricultural Association banquet for outstanding Illinois 4-H Club members one of its most successful parties for farm boys and girls.

The dinner, honoring Illinois farm youth attending the 4-H Club Congress in Chicago during the International Livestock Exposition is an annual affair. This year it was held in the Mural Room of the Morrison Hotel.

IAA staff members, guests, leaders, farm advisers, and parents of 4-H members swelled the attendance to more than 450. Members of the IAA staff acted as hosts at each of the dinner tables.

George E. Metzger, IAA secretary of organization and information, served as chairman and I. E. Parett, secretary of general services, acted as toastmaster and gave the address of welcome.

"You are the farmers and farmers' wives of tomorrow," Parett said in his greeting. "You are the folks who are going to run the Illinois Agricultural Association some day. The IAA is your friend. Come in and see us when you are in Chicago."

About ready for dessert at the IAA's annual 4-H Club banquet in the Morrison Hotel in Chicago are, clockwise: Cletus Schertz, Woodford; Pauline McMillan, Sangamon; Ray De Fillipo, IAA; Butch Ryan, La Salle; Charles Calkins, La Salle; Wayne Elliott, La Salle; Carlan Hans, Madison; and Kenneth Osborne, Somersetshire, England.

Speaking for the 4-H boys at the dinner, Bill Simon of Bureau county thanked the IAA for playing host and added: "The greatest reward we 4-H'ers have is the satisfaction of being part of this great work and having a part in its success."

Doris Chelin of Bureau county, as spokesman for the girls, echoed Simon's sentiments and acknowledged the contribution of Farm Bureau and the IAA to the success of the 4-H Club movement. "Our organization has an important role to play," she concluded. "Let's play it well."

Illinois' outstanding 4-H club members were introduced by F. H. Mynard and Miss Anna Searl, both of the University of Illinois. Each member was cited for the most notable achievements in his 4-H work.

Principal speaker of the evening was Mrs. Kathryn Van Aken Burns, state leader of home economics extension at the University of Illinois, who told the assembled 4-H'ers: "4-H has given you educational advantages and personal enrichment. Now what can you do for 4-H?

"You can help increase enrollment," she said, "No county has more than 22 per cent enrolled in 4-H work. You can help explain the work to parents who do not understand 4-H. You can help with the leadership of your own unit. Good local leadership is the key to success. Do more so 4-H can do more for the people of Illinois."

Shuman Asks Industry and Labor

President Charles B. Shuman

By following the lead of Agriculture's Abundant Practices, Industry and Labor Can Do Much to Minimize Present Inflation, Shuman tells 5,000 Farmers

★ ★ ★ ★

THIS, the 33rd Annual Meeting of the Illinois Agricultural Association, culminates a third of a century of successful service to farmers of Illinois by your great organization. To you, the delegates, members and friends attending this annual meeting, I extend an official welcome and urge that, as in the past, you make this convention your own. Our progress through the years has in great measure been due to the fact that the Farm Bureau members in Illinois have actively guided the policies of the Illinois Agricultural Association and its affiliates. Your interest and participation in this convention demonstrates your determination to continue that guidance and control.

Consistent Gains Through 1947

The problems, activities and accomplishments of your organization have become so many and varied that this annual report is, of necessity, only a brief summary. The detailed financial and operational reports of the Association and its affiliated organizations have been presented at the several annual meetings and conferences held during this convention. As you study these reports, you will be impressed by the consistent gains and successful operation of all phases of your organized activity during the year 1947.

As we look back to attempt to evaluate this year just completed, we are forced to conclude that "inflationary" is the word which characterizes 1947, — inflationary prices; inflationary wages; and inflationary thinking! Despite these difficult conditions, the overall policies of your organization have remained conservative. This is a great tribute to the caliber of the folks serving you as members of boards of directors, officers, staff and employees of Illinois Agricultural Association and associated companies. I am sure that I reflect the thinking of the entire membership when I express our appreciation to this group of people, who serve us in various capacities, for their continued loyalty and hard work. On the other hand, we with official or staff responsibilities know that this year could not have been successful except for the cooperation and support of the loyal Farm Bureau members of Illinois.

This year has brought a continuation of the rapid growth in membership and its accompanying responsibilities. This rapid growth has resulted in several internal organizational and operational problems, the most important of which will be reported. A little over one year ago, the voting delegates approved the purchase of the building which is now the home of the Association and most of the affiliated organizations. This was the largest financial transaction in the story of the organization. Early in 1947 we secured possession of a major part of this building and completed an extensive remodeling operation. The moving of the offices to the new quarters in the early summer was no small operation. Due to the existence of a few longer term leases, it was necessary for Illinois Farm Supply Company to remain at the old location until the remaining space is available. It also was essential that the operating office of Illinois Grain Corporation be maintained at a location near the trading center. With these exceptions, we are all now well established in our new home. I am happy to report that the new home of the organization is already paying dividends in increased efficiency, more satisfactory working conditions and greater security.

Activities in 7 Divisions

At the last annual meeting, the voting delegates approved the adoption of our employees' retirement plan. During the year the board of directors have approved the details of the plan and placed it in operation. This is a huge task not yet completed. The plan, as measured by most standards, is satisfactory. It will prove of increasing value to the Association from a competitive standpoint with other organizations and also as an orderly, automatic means of retirement for the employees who have given the best years of their lives in service to farmers.

Last year we reported that a study was being made with the intention of improving the functional operation of the organization. We now have the plan as evolved from this study in operation and it is resulting in increased efficiency and a clearer delegation of responsibilities. The activities of the Association quite naturally fall into seven divisions. Of these the Legal, Secretary, Treasurer, Comptroller and Organization departments were already established. The two new divisions created were Marketing and General Services.

Organization Division

At the head of this important division George E. Metzger, field secretary, serves as Secretary of Organization. Under his general direction are the Organization, Rural Youth, Special Services and Publicity departments.

The Organization department has continued to provide an active, aggressive membership acquisition and maintenance program. Practically all counties in the state have responded and cooperated with the result that the membership in the As-

sociation reached a new all time high of 145,851 at the close of the fiscal year. This is 15,026 more members or an increase of 11.4 per cent over the previous year. This new record is both an endorsement of the soundness of the Association's program and also a tribute to the organization staff and the thousands of loyal Farm Bureau members who have served as volunteer workers.

As our membership has grown, membership maintenance has become of greater and greater importance. A well thought out plan for action has been adopted by many counties. This plan, where properly applied, has resulted in marked increases in membership participation. We hope that all of the counties will place increased emphasis on maintenance during the coming year.

Emphasis on Youth Groups

Work with Rural Youth groups has continued to be a major project. The board of directors has suggested that increased emphasis be given these activities during coming months. Among the groups with which our organization should work even more closely are Rural Youth, Young Married Clubs, Boys' and Girls' 4-H Clubs, Future Farmers, Future Homemakers and Rural Scouts. The Association should also give serious consideration to the early development of a program of cooperation with local rural churches and a program for developing local community organizations.

* * *

for Unfettered Production ☆

The IAA RECORD is the largest single project in the Publicity department. Publication costs have increased enormously. No outside advertising has been accepted; the major part of the cost, therefore, is carried by your organization. The IAA RECORD is one of the best magazines of its kind in America and it is well read and appreciated by the membership.

Major activities of the Special Services department included, the Illinois Farm Sports Festival, the Illinois tour to the American Farm Bureau Federation convention in California, the Farm Bureau tent at the State Fair and the planning for this convention and many other meetings. The Illinois Farm Sports Festival is one of the greatest rural athletic and recreation events in this country. Participation has increased to the point where consideration must be given to some type of district elimination procedure.

General Treasurer's Division

During the year the responsibilities falling upon the General Treasurer were relieved to some extent by the election of a treasurer for the Illinois Farm Supply Company and also a treasurer for the three insurance companies. R. A. Cowles, General Treasurer, continues in a general supervisory and advisory capacity to these companies as well as being the active treasurer of the Association and other affiliates. The Treasurer already has presented the financial report of the Association. I do want to emphasize that the organization is in excellent financial condition and that, despite greatly increased operating costs, further additions to reserves have been made during the year.

General Comptroller's Division

Changes in the Comptroller's office similar to those made in the Treasurer's division have been completed. C. C. Chapelle, General Comptroller, acts in an advisory and general supervisory capacity for the Comptroller of the Illinois Farm Supply Company and for the Comptroller of the three insurance companies. One of the major responsibilities of the General Comptroller is that of budget building and budget control. While the Association has received increased income as a result of membership growth, the added costs of operation have more than offset these gains. In addition the increase in membership has necessitated an enlarged program of service. If the present general inflationary spiral long continues, your organization will be forced to increase its income or drastically curtail its services.

General Counsel's Division

Donald Kirkpatrick, as General Counsel, directs the activities of the Legal department and has general supervision of the Transportation department. There have been greatly increased demands for the services of these departments during

Shuman Asks Industry and Labor

President Charles B. Shuman

By following the lead of Agriculture's Abundant Practices, Industry and Labor Can Do Much to Minimize Present Inflation, Shuman tells 5,000 Farmers

★ ★ ★ ★

THIS, the 33rd Annual Meeting of the Illinois Agricultural Association, culminates a third of a century of successful service to farmers of Illinois by your great organization. To you, the delegates, members and friends attending this annual meeting, I extend an official welcome and urge that, as in the past, you make this convention your own. Our progress through the years has in great measure been due to the fact that the Farm Bureau members in Illinois have actively guided the policies of the Illinois Agricultural Association and its affiliates. Your interest and participation in this convention demonstrates your determination to continue that guidance and control.

Consistent Gains Through 1947

The problems, activities and accomplishments of your organization have become so many and varied that this annual report is, of necessity, only a brief summary. The detailed financial and operational reports of the Association and its affiliated organizations have been presented at the several annual meetings and conferences held during this convention. As you study these reports, you will be impressed by the consistent gains and successful operation of all phases of your organized activity during the year 1947.

As we look back to attempt to evaluate this year just completed, we are forced to conclude that "inflationary" is the word which characterizes 1947, — inflationary prices; inflationary wages; and inflationary thinking! Despite these difficult conditions, the overall policies of your organization have remained conservative. This is a great tribute to the caliber of the folks serving you as members of boards of directors, officers, staff and employees of Illinois Agricultural Association and associated companies. I am sure that I reflect the thinking of the entire membership when I express our appreciation to this group of people, who serve us in various capacities, for their continued loyalty and hard work. On the other hand, we with official or staff responsibilities know that this year could not have been successful except for the cooperation and support of the loyal Farm Bureau members of Illinois.

This year has brought a continuation of the rapid growth in membership and its accompanying responsibilities. This rapid growth has resulted in several internal organizational and operational problems, the most important of which will be reported. A little over one year ago, the voting delegates approved the purchase of the building which is now the home of the Association and most of the affiliated organizations. This was the largest financial transaction in the story of the organization. Early in 1947 we secured possession of a major part of this building and completed an extensive remodeling operation. The moving of the offices to the new quarters in the early summer was no small operation. Due to the existence of a few longer term leases, it was necessary for Illinois Farm Supply Company to remain at the old location until the remaining space is available. It also was essential that the operating office of Illinois Grain Corporation be maintained at a location near the trading center. With these exceptions, we are all now well established in our new home. I am happy to report that the new home of the organization is already paying dividends in increased efficiency, more satisfactory working conditions and greater security.

Newspapermen hear IAA President Charles B. Shuman (left) and IAA General Counsel Donald Kirkpatrick discuss issues of vital importance to farm people in separate press conferences during IAA meeting in St. Louis. Left to right: Shuman, Thiem, Chicago Daily News; Woods, St. Louis Globe-Democrat; Schulman, St. Louis Star-Times; Schulman; Tendick, Jacksonville Journal-Courier; Kearns, St. Louis Post-Dispatch; Popkess, Dairyman's Journal; Scheer, Champaign News-Gazette, and Kirkpatrick. Not shown is Compton of the Chicago Tribune.

the year. Illinois farmers may well be proud of the sound legal advice and guidance that they have had during these years of rapid growth in all lines of cooperative activity.

Secretary's Division

Paul E. Mathias, Secretary, also has under his general direction the building management, general office and personnel departments. The personnel problem alone is a huge responsibility. The employment situation in Chicago continues to be rather critical. With more than 628 employees in the Chicago offices of the Association and its associated companies, replacement of the natural turnover of employees alone is a large task.

General Services Division

I. E. Parett came to the Association during the year to head this division as Secretary of General Services. This new division includes the Rural School, Research, Roads, Safety and Health, Property Taxation, Soil and Fertility and Conservation Activities, and Veterinary Medical Relations departments. These activities are, in general, those dealing with local county problems. The work of all of these departments is already well established and understood by the membership. Our present need is to help the county Farm Bureau organizations make most effective use of their services.

A plan suggesting a uniform pattern of county Farm Bureau committees has been proposed, under which each phase of the Association's service activities would have a specific local committee with which to work. This plan, if adopted by the counties, will make possible an acceleration of the program of service by a definite delegation of responsibility.

Plans are now under way to fill the two important posts now vacant in this division by the employment of a Director of Research and a Director of Soil Fertility and Conservation Activities.

Marketing Division

The Marketing division was established during the year. L. L. Colvis, Secretary of Marketing, gives general direction to the Departments of Grain, Livestock, Dairy, Fruit and Vegetable Marketing. Due to the rapid changes during recent years in the methods of marketing farm products, the current problems facing this division are tremendous. I am happy to report that definite progress has been made during the year.

A coordinated plan for the future development of a greatly expanded grain marketing program has been approved and first steps have been taken towards its execution. A chain of cooperative river front grain elevators together with a statewide blanket of local and county grain cooperatives closely affiliated with the organization will be the foundation for a great marketing development through Illinois Grain Corporation and Illinois Grain Terminals Company. It will soon be necessary for Illinois Grain Terminals Company to start active operation.

The operations of Illinois Livestock Marketing Association have expanded greatly with the addition of nine new local organizations. Definite progress has been made toward the development of a coordinated program in livestock marketing for Illinois. It is to be hoped that within the next year a plan can be agreed upon which will permit more aggressive action.

Continued progress has been made in the fields of milk marketing, fruit marketing and frozen food locker service. Equipment shortages and building costs have prevented even more rapid expansion in these activities.

Other Problems Ahead

As has already been reported, all of your affiliated cooperatives and organizations have completed another very successful year. The insurance companies set many new records despite serious personnel shortages. Due to this condition and the large number of new employees, there have been frequent instances of error and behind-schedule operation. Much improvement has been made, but it will require the continued cooperation of all of us through this difficult period.

Illinois Wool Marketing Association is faced with an important decision. Under the present government controlled marketing plan, the system followed by the Association in the past is impractical. The organization must either cease operations or be prepared to inaugurate a marketing program including handling, grading and warehousing of wool. The Farm Bureau members in Illinois must make this decision, as this proposed new operation would require greatly expanded volume and capital.

Illinois Farm Supply Company is faced with major decisions involving major changes in policy and involving huge capital expenditures. Month by month the task of securing adequate supplies of petroleum products and fertilizer materials for an ever-growing membership has become more difficult. It now appears that we will be required to enter the field of production and manufacture if we are to meet the demands of Illinois farmers for a dependable supply of high

Miriam E. Meyer, 16, Crescent City, is shown with her grand champion barrow at the International Livestock Exposition in Chicago. She was the first woman to win the honor.

Chicago Times Photo

ILLINOIS Has BEST SHOWMEN AT INTERNATIONAL

ILLINOIS led the parade at the International Live Stock Exposition. It was crowned grand champion state by virtue of winning 164 firsts and 52 championships. Indiana was second with 83 and 41.

Miriam E. Meyer, 16, veteran 4-H champion, Crescent City, Iroquois county, was probably the proudest girl at the giant show. Her 265-pound Chester White, "Pal", was named champion barrow of the junior competition and went on to win the grand championship of the show. She sold "Pal" for $2.25 a pound. A senior at Crescent City high school, Miss Meyer exhibited in the 1946 International, winning a class award with the same type of barrow. She holds the Illinois 4-H club's 1947 award as a state outstanding member in agriculture and home economics. She has won the award in projects on dressmaking and baking. She lives on a 160-acre farm with her parents, Mr. and Mrs. Edwin Meyer.

Kathryn McKinley, Frankfort, Will county, was another member of the fair sex who took some of the prizes away from the male contenders. Her Hereford entry, "Champ," was named junior winner at the International.

The grand champion carload of 25 hogs, Poland Chinas, was shown by Walter Schlichting, Apple River, Jo-Daviess county Farm Bureau member. They sold for $36.25 a hundredweight.

Harvey W. Stiegelmeier, Normal, McLean county, who has won the crown of soybean king at Farm and Home Week with regularity, repeated at the International Hay and Grain Show by being named 1947 soybean king of the nation. It was his second International championship in a row. He has won 16 trophies and more than 700 ribbons with his agricultural products. His soybeans were of the Lincoln variety.

Miss McKinley's Hereford sold for $1 a pound, and the steer weighed 1200 pounds.

Europeans SHOW CRITICAL NEED FOR FATS AND OILS

WE can argue about the price of hogs but most Europeans don't even now what pork looks like. What's more, in many countries a meeting of this kind just wouldn't be held.

This was the message of tolerance delivered to farmers attending the annual meeting of the Illinois Livestock Marketing Association by L. J. Norton, farm economist at the University of Illinois.

Norton, who has recently toured agricultural areas of Europe and Britain, said Europeans crave fats and are anxious to get the lard we are now producing in surplus.

"It is impossible to realize the premium Europeans will pay for our fats. The Poles will actually trade three pounds of meat for one pound of lard," Norton explained. "All the countries want fats badly, and we will probably continue to ship large quantities of food overseas, chiefly feed grains and fats. We will do this in large part because of humanitarian reasons."

Speaking of farm prices in general, Norton said the Bureau of Agriculture Economics forecasts that declines in 1948 will be modest, if any occur at all.

"I am inclined to agree. I do not think we will see any overall increase in price averages of farm products as some have predicted."

He indicated that rationing would probably not work well". But farmers should not underestimate the power behind the drive to put price controls back on."

One of the strong and continuing programs of the government, Norton said, has been its continuing program of buying wheat.

"It has saved grain in a way that farmers can understand. It has made it unprofitable for farmers to feed wheat to livestock."

Chicago Times Photo

Double congratulations are in order for Kathryn McKinley, 21, Frankfort, (right). Her Hereford entry in the International Livestock Exposition gave her the junior championship and she revealed her engagement to Leslie Cornwall, 22, of Elgin, (left). They met at the 1945 show in Chicago.

RESOLUTIONS ADOPTED BY BOARD OF DELEGATES AT 33RD ANNUAL MEETING IN ST. LOUIS, NOVEMBER 20, 1947

FOREWORD

THE two years of peace which have followed the most devastating war the world has ever seen have not yet produced a peacetime economy.

American agriculture is being asked for maximum production to meet the needs of a war-torn and yet unreconstructed world. The task ahead is a challenge which the farmers of Illinois will accept in a spirit of democratic cooperation for the sake of those whose needs are so great.

American democracy is being critically tested. Traditional concepts of work, enterprise and the rewards thereof to her citizens are threatened with submergence by an attitude of much for little, an emphasis on high pay rather than on productive service.

The Illinois farmer believes that a sound prosperity and abundance will exist only when agriculture, labor and industry eliminate unnecessary costs, restrictive practices and prices unrelated to service rendered or the useful value of commodities produced and products manufactured.

Let us be diligent in reviving our great and fundamental American ideals.

I. PRICE CONTROL AND RATIONING

Congress has been requested to authorize the reimposition of price ceilings and rationing on farm products and other commodities in short supply. The Association supported price control and rationing during the war as an emergency measure but insisted that such controls apply to all commodities and to the wages of labor. Experience has demonstrated that this type of program cannot succeed unless all phases of our economy are rigidly controlled. While these control measures were somewhat successful during the war even then many exceptions were made. Experience after the end of the war demonstrates that the American people will not accept or support this type of regimentation in peacetime. Recent experience proves that maximum production cannot be obtained under a system of price controls and rationing. We militantly oppose the reimposition of price controls and rationing.

II. FOREIGN AID PROGRAM

A Christian, humane people cannot ignore the need and distress of the peoples of the war ravaged countries of Europe and Asia. We must endeavor to relieve their want, distress and suffering. However, the United States produces only 12% of the world's food supply. We must recognize that our country cannot indefinitely support and provide for distressed peoples all over the world. Our efforts must be directed toward the rehabilitation of these distressed peoples and the restoration of their economic ability to support themselves. We must be realistic and deny aid to those nations which, through economic or trade barriers, refuse to cooperate in the economic rehabilitation of other distressed countries and areas. We must deny aid to those countries that would destroy our free enterprise system. Recognizing that we cannot purchase good will, nevertheless we must insist that the persons to whom aid is extended know the source of this aid.

We must require that the goods and commodities furnished be distributed in a manner which will safeguard against profiteering and black market operations. Our assistance to others must not unduly deplete our natural resources, greatly increase our national indebtedness or impoverish our own people, thereby rendering our nation and our people unable to respond to future calls upon their generosity. We will support a realistic program of assistance for rehabilitation of distressed peoples, conforming to the foregoing principles.

Observers at the IAA annual convention in St. Louis were Kenneth Osborne, 21, (left) young English farmer, and Miguel Bechara, 30, (right) of Brazil. Both are in the U.S. to study American farm organizations.

III. LONG RANGE FARM PROGRAM

Present agricultural legislation was enacted under the stress and demands of an extreme emergency. Considering this fact, it is remarkable that the many phases of this pattern for action have fitted together into a program that was in general accepted and used by farmers. Today in retrospect we see a number of mistakes, yet we also know that many instrumentalities of proven value to agriculture were developed as a result of this legislative program. It would be unwise to repeal this existing basic legislation. We should give careful study to ways in which needed improvements in our basic farm program may be made by modification and amendment.

It would not be advisable to press for the extension on a permanent basis of war emergency programs designed to promote exceptional production by high level price supports. We will give careful study to all proposals for modification of our agricultural legislation to determine not only their impact upon agriculture but also their effect upon the nation as a whole.

IV. SOIL CONSERVATION

We favor continued and increased emphasis on conservation of the soil in all its phases. However, there has been considerable duplication of soil conservation activities by Government Agencies, especially at national and state levels. This has caused considerable confusion and waste. All of the Government soil conservation activities should be combined under one agency at these levels. Research projects should be assigned to the recognized research institutions — the experiment stations. Educational and promotional activities should be administered by the Extension Service, which is the agency best fitted to do this work. These changes would not hamper the good work being done by local soil conservation agencies. A more efficient and

better coordinated program is essential if we are to turn the tide that is rapidly carrying us toward national soil poverty.

V. LABOR MANAGEMENT RELATIONS

For a number of years this association urged the enactment of national legislation to correct abuses in labor management relations and protect the public interest. The 80th Congress enacted the "Labor Management Relations Act, 1947" and this legislation now is in effect. The Illinois Agricultural Association and the American Farm Bureau Federation vigorously supported this legislation. Its opponents urge that it be repealed. We oppose any efforts to repeal or weaken this legislation. We commend the statesmanship of those members of Congress from Illinois who supported this legislation.

VI. TAXATION OF FARMER COOPERATIVES

Farmer cooperatives are under vicious and unwarranted attacks. It is alleged that farmer cooperatives avoid their fair share of the Federal tax burden. This claim is a cover-up. The real motive of these attacks is not to effect an equitable tax adjustment or reform, but to destroy farmer cooperatives. The position of the Illinois Agricultural Association and its affiliated cooperatives has heretofore been clearly and emphatically stated. Because of the bitterness of these attacks, however, the Association herewith restates its position.

It is sound fiscal policy for every farmer cooperative to have and maintain an adequate capital structure. Such a structure permits the cooperative to distribute periodically to its member patrons its operational savings and earnings where such income, in the hands of the recipient, can be subjected to the graduated income tax rates applicable to individuals.

RESOLUTIONS COMMITTEE

F. E. Morris, Sangamon County, Chairman; Dexter Norton, Kane; Geo. Bark, DeKalb; Frank Buckman, Lee; Durham Lucas, Warren; George Logan, Schuyler; Chas. Haller, Peoria; N. O. Bradon, Livingston; Harold Seedorf, Kankakee; Frank L. Simpson, DeWitt; Chester A. Thomason, Morgan; Clarence Whittier, Macoupin; Geo. L. Bauer, Bond; W. C. Buzzard, Fayette; O. N. Stinson, Saline; Peter D. Dillow, Union; R. V. McKee, Marshall; E. T. Culnan, Logan; D. L. Clarke, Sangamon; J. King Eaton, Madison; Lyman Bunting, Edwards; Albert Webb, Franklin; Burnell Henert, Lee, Rural Youth Representative.

Certain farmer cooperatives operate as income tax exempt corporations, while other farmer cooperatives operate as non-exempt corporations. Every farmer cooperative operating as an income tax exempt corporation is required to make an annual informational return, setting forth in detail its operations for the respective fiscal year. If the return indicates that such farmer cooperative is operating within the limitations of law and the regulations issued thereunder, no duty exists on the part of such farmer cooperative to pay an income tax. One of the limitations provided by law is the maintenance of only reasonable and necessary reserves. If such cooperative insists on exceeding such "reasonable" and "necessary" reserves, its right to exemption should be revoked. We will support any needed revision of law or regulation which will more clearly define "reasonable" or "necessary" reserves.

If on the other hand the farmer cooperative is operating as a non-exempt corporation, it is duty-bound to make a tax return and pay income tax.

That part of the income of any corporation, whether it be a business corporation or a cooperative, which is distributed to shareholders as dividends on capital stock should not be subject to the corporation income tax since such income is taxable in the hands of the shareholders. Double taxation is unjust and obnoxious. All income under existing law and regulations, if equitably distributed by any corporation as patronage refunds pursuant to a definite prior commitment therefor, is not subject to the corporation income tax. We will vigorously oppose and resist the application of an income tax upon any portion of the income of a farmer cooperative which is equitably and currently distributed to members and patrons in the form of patronage refunds.

VII. COSTS OF DISTRIBUTION

The cost of distribution of farm products is relatively inflexible. Over a period of forty years the marketing, processing and distribution costs have gradually increased. This trend has accentuated the long-time disparity which has existed between the prices of farm products and the prices of other commodities.

These increased costs of distribution are in part a result of the use of monopolistic restraints and practices by the

Members of the IAA's resolutions committee are: first row, left to right, Dan L. Clarke, Sangamon county; Frank L. Simpson, DeWitt; George Logan, Schuyler; F. E. Morris, Sangamon, chairman; P. D. Dillow, Union; Clarence Whittier, Macoupin; O. N. Stinson, Saline; Paul Mathias, IAA secretary. Second row, R. V. McKee, Marshall; Charles Haller, Peoria; C. A. Thomason, Morgan; J. Present agricultural legislation was enacted under the stress and demands of an extreme emergency. Considering this fact, it is remarkable that the many phases of this pattern for action have fitted together into a program that was in general accepted and used by farmers. Today in retrospect we see a number of mistakes, yet we also know that many instrumentalities of proven value to agriculture were developed as a result of this legislative program. It would be unwise to repeal this existing basic legislation. We should give careful study to ways in which needed improvements in our basic farm program may be made by modification and amendment.

It would not be advisable to press for the extension on a permanent basis of war emergency programs designed to promote exceptional production by high level price supports. We will give careful study to all proposals for modification of our agricultural legislation to determine not only their impact upon agriculture but also their effect upon the nation as a whole.

IV. SOIL CONSERVATION

We favor continued and increased emphasis on conservation of the soil in all its phases. However, there has been considerable duplication of soil conservation activities by Government Agencies, especially at national and state levels. This has caused considerable confusion and waste. All of the Government soil conservation activities should be combined under one agency at these levels. Research projects should be assigned to the recognized research institutions — the experiment stations. Educational and promotional activities should be administered by the Extension Service, which is the agency best fitted to do this work. These changes would not hamper the good work being done by local soil conservation agencies. A more efficient and

better coordinated program is essential if we are to turn the tide that is rapidly carrying us toward national soil poverty.

V. LABOR MANAGEMENT RELATIONS

For a number of years this association urged the enactment of national legislation to correct abuses in labor management relations and protect the public interest. The 80th Congress enacted the "Labor Management Relations Act, 1947" and this legislation now is in effect. The Illinois Agricultural Association and the American Farm Bureau Federation vigorously supported this legislation. Its opponents urge that it be repealed. We oppose any efforts to repeal or weaken this legislation. We commend the statesmanship of those members of Congress from Illinois who supported this legislation.

VI. TAXATION OF FARMER COOPERATIVES

Farmer cooperatives are under vicious and unwarranted attacks. It is alleged that farmer cooperatives avoid their fair share of the Federal tax burden. This claim is a cover-up. The real motive of these attacks is not to effect an equitable tax adjustment or reform, but to destroy farmer cooperatives. The position of the Illinois Agricultural Association and its affiliated cooperatives has heretofore been clearly and emphatically stated. Because of the bitterness of these attacks, however, the Association herewith restates its position.

It is sound fiscal policy for every farmer cooperative to have and maintain an adequate capital structure. Such a structure permits the cooperative to distribute periodically to its member patrons its operational savings and earnings where such income, in the hands of the recipient, can be subjected to the graduated income tax rates applicable to individuals.

Certain farmer cooperatives operate as income tax exempt corporations, while other farmer cooperatives operate as non-exempt corporations. Every farmer cooperative operating as an income tax exempt corporation is required to make an annual informational return, setting forth in detail its operations for the respective fiscal year. If the return indicates that such farmer cooperative is operating within the limitations of law and the regulations issued thereunder, no duty exists on the part of such farmer cooperative to pay an income tax. One of the limitations provided by law is the maintenance of only reasonable and necessary reserves. If such cooperative insists on exceeding such "reasonable" and "necessary" reserves, its right to exemption should be revoked. We will support any needed revision of law or regulation which will more clearly define "reasonable" or "necessary" reserves.

If on the other hand the farmer cooperative is operating as a non-exempt corporation, it is duty-bound to make a tax return and pay income tax.

That part of the income of any corporation, whether it be a business corporation or a cooperative, which is distributed to shareholders as dividends on capital stock should not be subject to the corporation income tax since such income is taxable in the hands of the shareholders. Double taxation is unjust and obnoxious. All income under existing law and regulations, if equitably distributed by any corporation as patronage refunds pursuant to a definite prior commitment therefor, is not subject to the corporation income tax. We will vigorously oppose and resist the application of an income tax upon any portion of the income of a farmer cooperative which is equitably and currently distributed to members and patrons in the form of patronage refunds.

VII. COSTS OF DISTRIBUTION

The cost of distribution of farm products is relatively inflexible. Over a period of forty years the marketing, processing and distribution costs have gradually increased. This trend has accentuated the long-time disparity which has existed between the prices of farm products and the prices of other commodities.

These increased costs of distribution are in part a result of the use of monopolistic restraints and practices by the

distribution industry and by industrial labor. We insist that the full power of the government be directed towards the destruction of these monopolies and the curbing of monopolistic practices.

Unless effective action can be had soon, farmers will be forced to provide the needed competition in the distribution industry by greatly increasing the scope of their farmer cooperatives.

VIII. FLOOD CONTROL

The President of the United States has recommended to Congress that the Nation embark on a gigantic program for the control of floods in the entire Mississippi basin, extending from the Appalachian to the Rocky Mountains. The Association has heretofore expressed its opposition to proposals for huge expenditures for flood control until it is clear that the monetary benefits resulting are greatly in excess of the cost and it is unquestionably clear that the project is justified and necessary to serve the general welfare. We have opposed the undertaking by the Federal government of projects involving such huge expenditures at a time when the government has such a great indebtedness unless such projects are shown to be essential and necessary for the general welfare and the protection of life and property. We reaffirm our position on these matters.

We regard as unsound the present procedure whereby the Corps of Engineers of the United States Army, the agency which carries out and directs expenditures upon these projects, makes both the preliminary studies as to the nature of the projects to be undertaken and recommendations to Congress as to whether the project should be undertaken. We believe that the studies made by the Corps of Engineers should be reviewed by a representative civilian commission before recommendations are made to Congress and the projects undertaken. We urge the Association and the American Farm Bureau Federation to support the necessary legislation to provide for the creation of a Federal Flood Control Commission (or Water and Land Conservation Commission) to receive and review the reports of the army engineers, consider the effect of flood control proposals and plans upon agriculture, water and land conservation, wild life conservation, the general economy and welfare of the communities and states affected as well as the general welfare of the nation as a whole and based upon these considerations to make recommendations to Congress.

IX. FARM-TO-HIGHWAY ROADS

There are over 1,600 separate local road districts in Illinois. Their mileage of roads and their financial ability varies greatly. For years, the cost of administration, labor and machinery has made it financially impossible for a large number of these districts to improve and maintain their roads or to repair culverts and bridges. Over half of our local farm roads are still primitive dirt. Hundreds of bridges on these roads are in critical need of attention.

It appears that rural people in many areas could have better roads for their road tax money if a number of townships or road districts were combined for operating and road maintenance purposes. It is now possible to combine and create larger districts for road and bridge improvement and maintenance purposes. We strongly urge farmers to examine and analyze their local road problem and to consider the possibility of larger road districts.

We recognize that state funds are necessary for these roads. We have supported legislation in the last two sessions of the General Assembly which provided two state grants for farm-to-highway roads from the general fund of the State. We reaffirm our policy of support of legislation necessary to continue State funds for the improvement of these roads. We urge County Farm Bureaus to carefully watch the administration of these funds.

A permanent source of State funds insuring a long-range, continuous program of improvement for farm-to-highway roads is necessary. We pledge the support of the Association in securing these funds.

X. HIGHWAY TRAFFIC SAFETY

The rising traffic accident toll with its resulting loss of life, personal injuries, and property damage forcibly indicates the need for increased safety measures and better enforcement of our traffic laws. We should strive to reduce the number of traffic accidents attributable to driver failure and defective automobiles.

The drivers' license law should be strictly enforced. We should make certain that all persons to whom licenses are granted are mentally and physically qualified to drive. Greater vigilance should be used to make certain that all drivers are licensed. We should insist upon better reporting and recording of convictions for traffic law violations, and especially upon the revocation of driver licenses wherever warranted.

We should give consideration to the possible requirement of at least an annual inspection of those mechanical features of automobiles primarily affecting safety.

We should support such changes in our state highway police system as may be necessary to secure the establishment of a true merit system under which well-qualified men will be advanced and retained. In addition, a more adequate number of competent state police should be provided. We will support state police and local law enforcement officials in the strict enforcement of our traffic laws.

XI. SALES TAX DIVERSION

Municipalities urge that a portion of the State receipts from the Retailers' Oc-

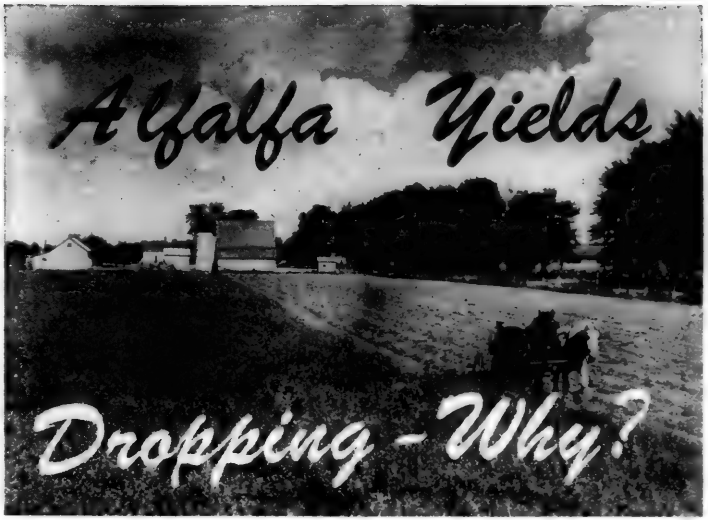
Farm Bureau people appearing on WLS Dinnerbell Hour during IAA convention in St. Louis are, left to right: Martin Meyer, who signed up Cook county's 4,000th member; Carl Cox, Franklin, top county organization director in 1947; C. H. Mills, Cook C.O.D.; Ed Gumm, Knox, IAA director; Norman Runge, Cook's 4,000th member; O. D. Brissenden, IAA organization director; former IAA President Earl C. Smith, Pike; AFBF President Edward A. O'Neal; IAA President Charles B. Shuman, Moultrie; C. J. Elliott, La Salle, IAA director; and Homer Curtiss, Jo Daviess, IAA director.

Alfalfa Yields Dropping - Why?



THERE's trouble in our alfalfa fields! Too many farmers have lost their enthusiasm for this crop, yet alfalfa provides an excellent, high protein feed.

It looks from the facts as though we have been expecting alfalfa to thrive on soils that are becoming exhausted. Take a look at the table we prepared from data on the chemical make-up of alfalfa. From this we figured what it takes in terms of common fertilizer materials to put back into the soil the plant food removed by the hay crop on an acre of alfalfa.

We have indicated only the major plant food elements removed in the hay. We have not considered the amounts lost by erosion, leaching, and fixation.

As farmers we want to manufacture a high protein forage, so we must concern ourselves with the supply of raw materials. Consider phosphate. To make 20 tons of hay, the amount of phosphate carried off amounts to 180 pounds per acre. If this phosphate were added in a highly concentrated fertilizer as triple superphosphate it would require only 400 pounds per acre. Instead, it is shocking to see that it takes 1500 pounds of a common fertilizer mixture as O-12-12.

Now let's take the case of potash. To make 20 tons of hay in the six year period about 600 pounds of potash is removed from one acre. If this removal were to be balanced by such straight goods as muriate of potash which contains 60 per cent potash, it would require 1000 pounds per acre. It is almost unbelievable, but it takes all of 3000 pounds per acre of as high a grade mixture as O-20-20 to do the same job.

Now let's look at our limestone needs. Ordinarily we have referred to limestone by its value as a neutralizer of soil acids. However, from the table you can see the importance of magnesium and calcium.

Fortunately there is a kind of limestone called dolomitic limestone that carries both calcium and magnesium in the carbonate form. If we expect to harvest 20 tons of hay in six years we will remove over one ton of limestone in the dolomitic form. Since calcium and magnesium are also lost by leaching and erosion, it is necessary to repeat our liming frequently.

What is the real meaning of all these figures in the table? First, our alfalfa is failing in many cases because we are letting it starve to death. Second, we cannot do a good job of farm managing if we must rely on low analysis fertilizers.

By GEORGE SCARSETH

Director of Research,
American Farm Research Association

How then can we fertilize alfalfa? The phosphate should be added at seeding time in amounts large enough to supply the crop 4 to 6 years. Ground rock phosphate can be used in amounts about twice that of 20 per cent superphosphate. The placement should be deep for best results in dry periods. Topdressing old alfalfa stands with phosphates does not work well since the phosphates don't move into the ground.

The potash should be applied annually for best results — after the first cutting has certain advantages. Liming should be repeated every 4 to 6 years. Soils should be tested and care taken not to over lime. Keep the pH from 6.0 to 6.5.

This Table Shows How Much Plant Food is Removed in Six Years by One Acre of Alfalfa.

Plant Foods and Kinds of Carrier	Amount removed per Acre to make: 20 tons hay (6 yrs. of crop)
PHOSPHATE (P205)	180 lbs.
If material is	
(1) Triple super (0-45-0)	400
(2) Ordinary super (0-20-0)	900
(3) Common mixture (0-12-12)	1500
POTASH (K_2O)	600
If material is:	
(1) Muriate of potash (0-0-60)	1000
(2) High grade mixture (0-20-20)	3000
(3) Common mixture (0-12-12)	5000
DOLOMITIC LIMESTONE	
Calcium	1760
Magnesium carbonate	640
Total lbs. dolomitic limestone	2400

About 25 pounds per acre of borax will correct the needs for this trace element. This treatment should be repeated whenever starvation symptoms show up or every 6 years.

The nature of the alfalfa plant is to push one big tap root deep into the ground. When alfalfa is first seeded in a field these deep tap roots go down to suck up both phosphate and potash from the subsoil.

The first time an alfalfa root reaches into such a subsoil it is practically in virgin territory. This big tap root, in the main, feeds out of what might be considered a hole. Eventually this hole becomes mined out and the crop starves. The first thing you know the field is taken over by blue grass or weeds.

When we fully realize how much phosphorus and potash each ton of alfalfa hay takes out of the ground, we see how soon both the top soil and the subsoil can become exhausted. When the subsoil has been emptied from a few years of alfalfa it is needless to expect that a 200 to 400 pound application of common fertilizer mixture will carry enough plant food to keep the crop producing heavy yields for six years.

The American farmer is allowing himself to pay too big a winter feed bill for his livestock. Alfalfa is a crop that could go a long way in reducing this cost. Recently Professor Truog at Wisconsin told how the Wisconsin farmers were spending about $100,000,000 for dairy concentrated feeds and spending only about $12,000,000 for plant foods to feed these crops.

distribution industry and by industrial labor. We insist that the full power of the government be directed towards the destruction of these monopolies and the curbing of monopolistic practices.

Unless effective action can be had soon, farmers will be forced to provide the needed competition in the distribution industry by greatly increasing the scope of their farmer cooperatives.

VIII. FLOOD CONTROL

The President of the United States has recommended to Congress that the Nation embark on a gigantic program for the control of floods in the entire Mississippi basin, extending from the Appalachian to the Rocky Mountains. The Association has heretofore expressed its opposition to proposals for huge expenditures for flood control until it is clear that the monetary benefits resulting are greatly in excess of the cost and it is unquestionably clear that the project is justified and necessary to serve the general welfare. We have opposed the undertaking by the Federal government of projects involving such huge expenditures at a time when the government has such a great indebtedness unless such projects are shown to be essential and necessary for the general welfare and the protection of life and property. DAIRY CO-OPS BREAK RECORDS for

PRAIRIE FARMS CREAMERIES MAY SOON NEED NEW PLANTS TO PROCESS EXPANDING VOLUME OF MILK

YOU ARE going to need new plants and creameries to do the job for your members, R. W. Bartlett, agricultural marketing expert from the University of Illinois, told members at the annual meeting of Prairie Farms Creameries held in St. Louis during the convention of the Illinois Agricultural Association.

"Most of the plants of Prairie Farms Creameries already are operating at over capacity and some areas of Illinois are not being served," Bartlett said he had observed.

Build Local Sales

This was substantiated by reports made available at the meeting which showed that an increase of more than 28 per cent of dairy products were processed or manufactured by the 10 member plants of the statewide dairy cooperative.

Bartlett also urged dairymen to consider a Grade A milk program. He said that at the present time demand is great for Grade A milk, and many city markets are not fully supplied. Grade A milk returns the highest prices to producers.

Bartlett suggested that Prairie Farms Creameries should build sales through their present local outlets and by adding a more complete line of dairy products.

"Local sales," he said, "are your best sales. Sell in the home county where the quality of the Prairie Farms brand is best known." Selling in home markets also saves unnecessary transportation costs.

At the dairymen's banquet sponsored by Prairie Farms Creamery and the Illinois Milk Producers Association during the IAA convention, President Charles B. Shuman, addressing the group, urged all dairymen to work closely together.

"We have to realize that milk is milk," Shuman said. "Surplus milk in one area is competing with all milk in the state. We can't just say this area is a cheese area and that area makes butter.

Urges Strong Loyalty

"Although I am not a dairy farmer," Shuman concluded, "I know how important volume is to dairy cooperatives. We need to carry over into dairy marketing a strong loyalty to our cooperatives."

During 1947 the 10 Prairie Farms Creameries have spent about $300,000 to improve their plants and manufacturing equipment, Dave Henry, manager, said during the meeting.

Referring to other activities, Henry said, "Prairie Farms have a reputation to uphold as producers of superior quality products. We have taken steps to safeguard this reputation.

"During the year we have built a new laboratory and completely equipped it to control the composition and quality of all Prairie Farms dairy products."

The new laboratory, located in Chicago, was built and equipped at a cost of $12,000 and is managed by Elmer Anderson, hired recently as a qualified dairy technologist.

Seek Quality

As a second step in quality control, Henry said that the state office had hired M. R. Johnson of Galesburg who is working with fieldmen and farmers at member plants to develop programs for more and better milk.

This year the state company has also employed C. M. Johnson as its production engineer to work with member plants to help and advise on plant layout, manufacturing methods, service to equipment and utilization of labor, all of which result in lower manufacturing costs.

Referring to changes in marketing, Henry said that local sales of butter downstate have increased to the point where there is very little surplus at each plant throughout the year.

Because of this it is no longer profitable to operate a central cutting plant in Chicago. In March the Chicago butter cutting plant was closed, Henry reported, and the small amount coming into the city was sold in bulk.

During the year Prairie Farms Creamery at Carlinville moved into its new building which was described as the most modern in construction and equipment. More than 4,000 persons attended its grand opening Aug. 4.

GUMM ENTERTAINS WITH TENOR VOICE

With a little help from IAA President Shuman (left) and the accordionist, Gil [illegible] county, retiring president of the Illinois Milk Producers Association, sings a solo with his usual [illegible]

"Unite Now

DOLLAR VOLUME

IMPA HANDLES 2.3 BILLION POUNDS OF MILK THIS YEAR

Ed Gumm, Knox county, (standing), retiring president of the Illinois Milk Producers Association and Illinois Milk Producers Supply Company, chats with members of the IMPS board in St. Louis. Left to right: C. H. Ryan, La Salle; Harry Gehring, Knox; Thiel Lewelian, Mascoutah; and Charles Conway, Peoria.

WORKING together as dairymen in Farm Bureau we will show as much progress as we have in fields of farm legislation because Farm Bureau has the strength to deal in big issues and in big programs.

This was the message brought to dairy farmers at the annual meeting of the Illinois Milk Producers Association by John R. Hanson, director of the dairy department of the American Farm Bureau Federation.

Praising the record of this large federation of Illinois milk producers, Hanson said the American Farm Bureau Federation through its commodity program is strengthening state-wide dairy groups by working on the problems that overreach state boundaries.

The Illinois Milk Producers Association is a statewide federation of milk bargaining and marketing cooperatives that supply fluid and manufactured milk products to most of the larger cities in Illinois. It is associated closely with the Illinois Agricultural Association.

In his report to members President Ed Gumm of Galesburg said that farm cooperative groups in Illinois were banding even more closely together. He cited the McLean County Milk Producers Association which has consolidated with the Prairie Farms Creamery of Bloomington. This has also been done in Moline.

As further evidence, Gumm pointed out that this fall Prairie Farms Creameries of Chicago became a member of the Illinois Milk Producers Association on behalf of its 10 member plants.

Gumm reported that the association this year marketed 2,373,209,190 pounds of milk for its farmer patrons which was valued at $97,569,761, highest volume and value in the association's history.

He said the daily average number of shippers of member cooperatives during the past year had increased to 21,625 from the 20,961 of last year.

Milk produced by these farmers sold at retail prices per quart delivered to homes as follows in September: Bloomington 19c; Canton 18c; Champaign 20c; Chicago 21½c; Danville 19c; Decatur 19c; DeKalb 17c.

Freeport 18c; Galesburg 17c; Jacksonville 18c; Kewanee 17c; La Salle-Peru 18c; Moline 18c; Peoria Dairy 21c; Peoria Milk 21c; Pontiac 15c; Quincy 16c; Rockford 19½c; Springfield Dairy 20c; Springfield Milk 20c; St. Louis 21½c; Streator 17½c.

The producer associations located in these cities together with Prairie Farms Creameries comprise the membership in the Illinois Milk Producers Association.

Farmers received for the past year an average weighted price of $4.11 a hundred for 3.5 per cent butterfat. Highest prices were received at Peoria, $4.50-$4.52, and St. Louis, $4.44, with lowest prices at Streator, $3.47, and Jacksonville, $3.54. The latter two, however, are not grade A markets. Chicago paid $4.06 and handled the most milk, 1,719,899,122 pounds.

In commenting on milk prices Gumm said there is a need for a more even supply of fluid milk for all seasons of the year.

During recent years, he said, fluid milk markets have faced shortages of quality milk during the fall months and were faced with burdensome surpluses during May and June.

Fr. Leo C. Brown, professor of economics at St. Louis University and a member of the St. Louis District Dairy Council, in a short talk said he supported the farmers contentions that changes must be made in the St. Louis Health Department to correct "arbitrary interpretations" of the health code.

This has resulted in dissatisfaction among farmers, he said, and a short supply of milk for St. Louis consumers.

In discussing the outlook for 1948, J. P. Mason, assistant director of dairy marketing, Illinois Agricultural Association, said that demand, production, and prices probably will remain the same as this year.

"The trade expects that consumer incomes will remain high and consumption of fluid milk and cream should remain at near 1947 levels," Mason said.

"Dairymen may suffer some because of a more unfavorable milk-feed ratio and because of other costs which may be higher.

"Any changes that are likely to occur in the export of dairy products due to the Marshall plan should not affect prices much for dairy farmers."

At the annual meeting of the Illinois Milk Producers Supply Company Mason reported that though the company was organized originally to serve as a buying agent for members of the Illinois Milk Producers Association and this year it was expanded to include purchasing operations for Prairie Farms Creameries.

The volume of sales increased to $187,802 this year from $43,651 in 1945, its first year, and $98,832 for last year. Its net income from operations this year amounted to $13,715.31 of which $9,564.87 was returned as patronage refunds.

To Control Milk Surpluses Later" – Shuman

DAIRY CO-OPS BREAK RECORDS for

PRAIRIE FARMS CREAMERIES MAY SOON NEED NEW PLANTS TO PROCESS EXPANDING VOLUME OF MILK

YOU ARE going to need new plants and creameries to do the job for your members, R. W. Bartlett, agricultural marketing expert from the University of Illinois, told members at the annual meeting of Prairie Farms Creameries held in St. Louis during the convention of the Illinois Agricultural Association.

"Most of the plants of Prairie Farms Creameries already are operating at over capacity and some areas of Illinois are not being served," Bartlett said he had observed.

Build Local Sales

This was substantiated by reports made available at the meeting which showed that an increase of more than 28 per cent of dairy products were processed or manufactured by the 10 member plants of the statewide dairy cooperative.

Bartlett also urged dairymen to consider a Grade A milk program. He said that at the present time demand is great for Grade A milk, and many city markets are not fully supplied. Grade A milk returns the highest prices to producers.

Bartlett suggested that Prairie Farms Creameries should build sales through their present local outlets and by adding a more complete line of dairy products.

"Local sales," he said, "are your best sales. Sell in the home county where the quality of the Prairie Farms brand is best known." Selling in home markets also saves unnecessary transportation costs.

At the dairymen's banquet sponsored by Prairie Farms Creamery and the Illinois Milk Producers Association during the IAA convention, President Charles B. Shuman, addressing the group, urged all dairymen to work closely together.

"We have to realize that milk is milk," Shuman said. "Surplus milk in one area is competing with all milk in the state. We can't just say this area is a cheese area and that area makes butter.

Urges Strong Loyalty

"Although I am not a dairy farmer," Shuman concluded, "I know how important volume is to dairy cooperatives. We need to carry over into dairy marketing a strong loyalty to our cooperatives."

During 1947 the 10 Prairie Farms Creameries have spent about $300,000 to improve their plants and manufacturing equipment, Dave Henry, manager, said during the meeting.

Referring to other activities, Henry said, "Prairie Farms have a reputation to uphold as producers of superior quality products. We have taken steps to safeguard this reputation.

"During the year we have built a new laboratory and completely equipped it to control the composition and quality of all Prairie Farms dairy products."

The new laboratory, located in Chicago, was built and equipped at a cost of $12,000 and is managed by Elmer Anderson, hired recently as a qualified dairy technologist.

Seek Quality

As a second step in quality control, Henry said that the state office had hired M. R. Johnson of Galesburg who is working with fieldmen and farmers at member plants to develop programs for more and better milk.

This year the state company has also employed C. M. Johnson as its production engineer to work with member plants to help and advise on plant layout, manufacturing methods, service to equipment and utilization of labor, all of which result in lower manufacturing costs.

Referring to changes in marketing, Henry said that local sales of butter downstate have increased to the point where there is very little surplus at each plant throughout the year.

Because of this it is no longer profitable to operate a central cutting plant in Chicago. In March the Chicago butter cutting plant was closed, Henry reported, and the small amount coming into the city was sold in bulk.

During the year Prairie Farms Creamery at Carlinville moved into its new building which was described as the most modern in construction and equipment. More than 4,000 persons attended its grand opening Aug. 4.

GUMM ENTERTAINS WITH TENOR VOICE

With a little help from IAA President Shuman (left) and the accordionist, Ed Gumm, Knox county, retiring president of the Illinois Milk Producers Association, sings a solo with his eyes closed.

"Unite Now

DOLLAR VOLUME

IMPA HANDLES 2.3 BILLION POUNDS OF MILK THIS YEAR

Ed Gumm, Knox county, (standing), retiring president of the Illinois Milk Producers Association and Illinois Milk Producers Supply Company, chats with members of the IMPS board in St. Louis. Left to right: O. H. Ryan, La Salle; Harry Gehring, Knox; Thad Loveless, Macoupin; and Charles Cameron, Peoria.

WORKING together as dairymen in Farm Bureau we will show as much progress as we have in fields of farm legislation because Farm Bureau has the strength to deal in big issues and in big programs.

This was the message brought to dairy farmers at the annual meeting of the Illinois Milk Producers Association by John R. Hanson, director of the dairy department of the American Farm Bureau Federation.

Praising the record of this large federation of Illinois milk producers, Hanson said the American Farm Bureau Federation through its commodity program is strengthening state-wide dairy groups by working on the problems that overreach state boundaries.

The Illinois Milk Producers Association is a statewide federation of milk bargaining and marketing cooperatives that supply fluid and manufactured milk products to most of the larger cities in Illinois. It is associated closely with the Illinois Agricultural Association.

In his report to members President Ed Gumm of Galesburg said that farm cooperative groups in Illinois were banding even more closely together. He cited the McLean County Milk Producers Association which has consolidated with the Prairie Farms Creamery of Bloomington. This has also been done in Moline.

As further evidence, Gumm pointed out that this fall Prairie Farms Creameries of Chicago became a member of the Illinois Milk Producers Association on behalf of its 10 member plants.

Gumm reported that the association this year marketed 2,373,209,190 pounds of milk for its farmer patrons which was valued at $97,569,761, highest volume and value in the association's history.

He said the daily average number of shippers of member cooperatives during the past year had increased to 21,625 from the 20,961 of last year.

Milk produced by these farmers sold at retail prices per quart delivered to homes as follows in September: Bloomington 19c; Canton 18c; Champaign 20c; Chicago 21½c; Danville 19c; Decatur 19c; DeKalb 17c.

Freeport 18c; Galesburg 17c; Jacksonville 18c; Kewanee 17c; La Salle-Peru 18c; Moline 18c; Peoria Dairy 21c; Peoria Milk 21c; Pontiac 15c; Quincy 16c; Rockford 19½c; Springfield Dairy 20c; Springfield Milk 20c; St. Louis 21½c; Streator 17½c.

The producer associations located in these cities together with Prairie Farms Creameries comprise the membership in the Illinois Milk Producers Association.

Farmers received for the past year an average weighted price of $4.11 a hundred for 3.5 per cent butterfat. Highest prices were received at Peoria, $4.50-$4.52, and St. Louis, $4.44, with lowest prices at Streator, $3.47, and Jacksonville, $3.54. The latter two, however, are not grade A markets. Chicago paid $4.06 and handled the most milk, 1,719,899,122 pounds.

In commenting on milk prices Gumm said there is a need for a more even supply of fluid milk for all seasons of the year.

During recent years, he said, fluid milk markets have faced shortages of quality milk during the fall months and were faced with burdensome surpluses during May and June.

Fr. Leo C. Brown, professor of economics at St. Louis University and a member of the St. Louis District Dairy Council, in a short talk said he supported the farmers contentions that changes must be made in the St. Louis Health Department to correct "arbitrary interpretations" of the health code.

This has resulted in dissatisfaction among farmers, he said, and a short supply of milk for St. Louis consumers.

In discussing the outlook for 1948, J. P. Mason, assistant director of dairy marketing, Illinois Agricultural Association, said that demand, production, and prices probably will remain the same as this year.

"The trade expects that consumer incomes will remain high and consumption of fluid milk and cream should remain at near 1947 levels," Mason said.

"Dairymen may suffer some because of a more unfavorable milk-feed ratio and because of other costs which may be higher.

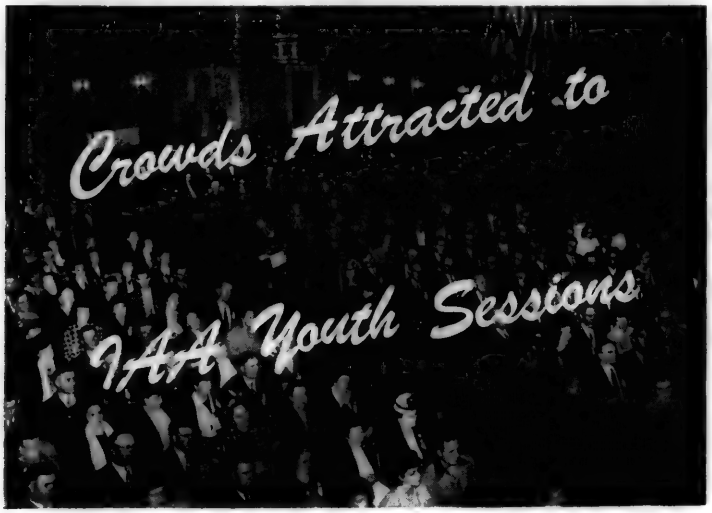
At the annual meeting of the Illinois Milk Producers Supply Company Mason reported that though the company was organized originally to serve as a buying agent for members of the Illinois Milk Producers Association and this year it was expanded to include purchasing operations for Prairie Farms Creameries.

The volume of sales increased to $187,802 this year from $43,651 in 1945, its first year, and $98,832 for last year. Its net income from operations this year amounted to $13,715.31 of which $9,564.87 was returned as patronage refunds.

e Now To Control Milk Surpluses Later" – Shuman

Headline illustration leaves the impression that the Rural Youth meetings were fairly-well attended.



LYLE SCHERTZ, 19, of Benson in Woodford county was winner of the annual Rural Youth Talk Fest, high point of the Rural Youth meeting held in conjunction with the annual meeting of the Illinois Agricultural Association in St. Louis. His topic was "There is a Relationship Between Animal Health and Human Welfare."

Schertz was to represent Illinois in the national Talk Fest held in conjunction with the American Farm Bureau Federation convention in Chicago in December.

Rural Youthers were out in front in all their scheduled activities at the IAA annual meeting and some of them had time to look in on many of the activities of the IAA's associated companies which many of them no doubt will some day have a hand in running.

Even the party planned to entertain members who arrived on the day previous in order to be on hand for the Talk Fest to begin at 9:30 a.m. the following day, had a capacity crowd of 223 in the Steamboat Room at the Mark Twain Hotel.

The Tuesday morning Talk Fest scheduled in the Gold Room at the Jefferson Hotel with 345 Rural Youth members and 500 adults present, held the attention of the audience throughout the entire 18 speeches. Five others, because of scores close to the top, were declared topnotch speakers. They were: Bill Mason, 23, La Salle; Mary Lee Holmes, 19, Pike; Elizabeth Cunningham, 26, Perry; John S. Fisher, 21, Mercer; Ruby Viere, 24, Madison.

Those receiving honorable mention were: Gavin Cross, Ogle; Maxine Roosevelt, Edwards; and Kathleen Coleman, Williamson.

While the Talk Fest was the center of attraction, it must be remembered that nearly 1,000 Rural Youthers took part in the local Talk Fests back in the counties. This activity is developing local talent throughout the state of Illinois, and Rural Youthers are engaging in it with increasing numbers each year.

The Rural Youth conference on Tuesday afternoon had as its main feature a court trial. The aim in the trial was to point out Rural Youth problems and how they could be solved. Individual Rural Youthers were placed on trial to symbolize counties and their problems. In each case, the counties which were brought into court did not actually face the problems for which they were tried, thus adding to the humor of the situation but at the same time looking squarely at problems which do come before Rural Youth groups.

The first dealt with membership drives for county organization. Edward Schulle, Ogle, representing "Illinois" county was placed on trial and found "guilty." Judge E. D. Lyon sentenced Illinois county to one year of probation in which the guilty was to keep membership constantly in mind, and was to report to the court one year hence and give an account of membership campaigns and the results.

Ray High, Christian, symbolizing "Podunk" county was placed on trial for failure to have a county Talk Fest. Although Dr. Quack, Tom Kerley, Brown, brought evidence that appearing in the Talk Fest was a shock to the nervous system to a point which effects peoples' minds and actions, the judge, believing that while some individuals might receive a nervous shock from appearing in a Talk Fest, pointed out that it was only by facing talkfesting squarely by participation that nervous reactions could be overcome adequately.

Ruth Huser, Tazewell, was placed on trial because her county failed to show adequate understanding of the relationship of Rural Youth to the University of Illinois and the Illinois Agricultural Association. Miss Huser was found "not guilty." However, the judge pointed out that an understanding of Rural Youth relationships was a mark of broadmindedness on the part of Rural Youth members, and stated that each Rural Youth member should be made to understand that the University of Illinois and the Illinois Agricultural Association through their Youth Departments are sponsoring Rural Youth through the county Farm and Home Bureau organizations.

The prosecuting attorney, Burnell Henert, Lee, and defense attorney, Eddie Dew, Ogle, carried their parts well as did the witnesses who appeared on the stand; even including the bare-footed

J. R. Young, Henry county, weaves in and out of a line of markers during Illinois state safety driving contest sponsored by IAA during convention in St. Louis. Young placed second

Rural Youther who found it hard to get to meetings because of mud roads but who always came when it was possible for him to do so.

At the close of the afternoon conference the new state committee members and their alternates were elected as follows: Edna Dew, Ogle; alternate, Bob Sievers, Rock Island; Glenn Niehaus, Montgomery; alternate, Marie Buhrman, Washington; Rex Emory, McDonough; alternate, Lyle Schertz, Woodford; George Matthews, Whiteside; alternate, Russ Scheeler, Peoria; Ruth Huser, Tazewell; alternate, Sumner Johnson, Knox. The state committee had its first meeting on Thursday afternoon and elected Ruth Huser, Tazewell, as the official representative to the National Rural Youth Committee of the American Farm Bureau Federation. Edna Drew, Ogle, was chosen as her alternate.

The Rural Youth mixer on Tuesday evening, led by Johnnie Rollins and his committee was enjoyed from grand march to the final dance. The mixture of marching, ballroom dancing, and square dancing provided an evening of pleasure to all who participated.

The final session for Rural Youth was the breakfast served in the Steamboat Room, Mark Twain, 7 o'clock Wednesday morning with 108 people, mostly young people, being served. Speakers for the occasion were: Miguel Bechara, Sao Paulo, Brazil, and Kenneth Osborne, Somerset, England. Rural Youthers were greatly interested in the remarks of these two men and asked many questions following their talks.

Six Topnotchers pose for a picture after they placed high in the annual Rural Youth Talk Fest held at St. Louis in conjunction with the IAA annual meeting. Winner of the Talk Fest was Lyle Schertz (left) of Woodford county. He was to represent Illinois in the national Talk Fest at the AFBF convention in Chicago in December. Back row: Schertz, Bill Mason, La Salle, second; John S. Fisher, Mercer, fifth; front row: Mary Holmes, Pike, third; Ruby Viers, Madison, fourth and Elizabeth Cunningham, Perry, sixth.

Ray Eichelberger, Champaign county, receives trophy from IAA President Shuman after winning state safe driving contest in St. Louis. Left is Sgt. C. L. Rockwell, one of the judges and member of the Illinois State Police, traffic safety section.

Ray Eichelberger Wins IAA State Skilled Drivers Contest

RAY EICHELBERGER was adjudged best man behind a steering wheel following the first annual Rural Youth state skilled drivers' contest held since the end of the war.

The contest pitted the winners of eight Illinois districts against each other and was held in conjunction with the Illinois Agricultural Association annual meeting in St. Louis.

Cooperating with the IAA departments of young peoples activities, and safety and public health in conducting the contest were the traffic safety division of the Illinois state police and St. Louis city police.

Placing second in the contest was J. Robert Young, Henry county. Third was Albert Henne, Kendall county.

The contest started in the counties where 1,500 participants competed and 72 of them went to the district finals. The preliminary trials included a written test and a driving test.

The finals at St. Louis also were divided into two parts — 1. an actual street driving test in St. Louis traffic, and 2, a test of skill.

The actual driving performance was graded on knowledge of traffic regulations, attitude, courtesy, signalling, approaching, turning, stopping for signs, speed gear shifting, alertness, distraction, use of horn, following, passing, etc.

The skill test consisted of trick performances such as backing in and out of stanchions placed on the street at intervals, doing same going forward, stopping with bumper over a line after braking at 20 miles per hour, parking correctly, and signalling.

President Shuman of the IAA presented Eichelberger with a gold trophy and Young with a plaque.

R.F.D. AMERICA IS NEW QUIZ SHOW FOR FARM FOLKS

LA SALLE county farm folks were scheduled to appear on R.F.D. America, new farm radio quiz show, Dec. 25. Listed on the program were Robert Sawyer and Mrs. Ruth H. Stratton of Leland, and Bob Ashley of Tonica.

This new program is heard every Thursday night over the Mutual Broadcasting System at 8:30 CST. Joe Kelly, quizmaster of the Quiz Kids program, is in charge of the show. Illinois radio stations on which the program can be heard are WGN, Chicago; WJPF, Herrin; WQUA, Moline; WKRO, Cairo, and WGIL, Galesburg.

Main purpose of the program, according to its originator, is to bring about a better understanding between farm and city groups.

A "Friendly Farmer" award is made on each week's program to the farmer who has helped a neighbor. On the Dec. 4 program, 22 friendly farmers of Shannon, Carroll county, who helped out an injured neighbor, Edgar H. Schoonhaven, were guests on the program. They did his chores and raised $700 to help pay his hospital bill when he suffered a broken back.

If you want to see the program any time you plan to be in Chicago write for the tickets to R.F.D. America, Chicago, Ill. The show is staged at the Eighth Street Theater, Chicago.

Headline illustration leaves the impression that the Rural Youth meetings were fairly-well attended.

List Changes In Boards of IAA Associated Companies

RESULTS of elections of boards of directors of the statewide cooperatives affiliated with the Illinois Agricultural Association announced at the IAA convention in St. Louis, are as follows:

Illinois Farm Bureau Serum Association

Directors re-elected: R. V. McKee, Varna; Ray Cunningham, Alvin; Jesse Tuttle, West York; J. W. Cory, DeKalb; Ben Bodecker, Sutter; Everett G. Reynolds, Jacksonville, and K. T. Smith, Greenfield.

Illinois Cooperative Locker Service

New directors: H. J. Dahmer, Marion, who succeeds E. A. Fosse, Marion; E. T. Culnan, Lincoln, (IAA board representative).

Directors re-elected: Dana Cryder, Minooka; J. E. Mau, Harmon; Earl L. Wenzel, Kirkland; Carl J. Bates, Kewanee; C. Ray Ward, Cropsey, and Paul Rosentreter, Carlinville.

Illinois Agricultural Auditing Association

New directors: Irving M. Graham, Carthage; E. Y. Naffziger, Walnut, who succeeds R. H. Voorhees, Jerseyville, and Carl A. Lage, Saybrook.

Director re-elected: Lyman Bunting, Ellery.

Illinois Wool Marketing Association

New director: August Eggerding, Red Bud, who succeeds Escol Oxford, Elizabeth.

Directors re-elected: William Temple, Serena; A. L. Doubet, Williamsfield; J. King Eaton, Edwardsville, and J. T. Evans, Hoopeston.

Illinois Livestock Marketing Association

New directors: Glen Ackermann, Ridott; B. W. Horan, Aledo; Otto Steffey, Stronghurst; M. Ray Ihrig, Golden, and Edwin Gumm, Galesburg.

Directors re-elected: Mont Fox, Oakwood; J. Ralph Beckett, Blue Mound; Carl A. Lage, Saybrook, and R. V. McKee, Varna.

Illinois Farm Supply Company

Directors re-elected: J. P. Redman, Cairo; Charles Keslinger, LaFox; Frank J. Flynn, Murrayville; Jesse L. Beery, Cerro Gordo; George Chapple, Dwight; Glenn H. Geiter, Orangeville; John P. White, Washington; R. H. Monke, Litchfield; Fred E. Herndon, Macomb; Otto Steffey, Stronghurst, and F. E. Morris, Buffalo.

Illinois Grain Corporation

New director: George Trotter, Coles City, who succeeds C. A. Hunt, Morris.

Directors re-elected: Charles Schmitt, Beason; Carl O. Johnson, Varna; John H. Butterfield, Pana; E. E. Stevenson, Streator; Ralph Vercler, Washington; Sam Yergler, Cissna Park; Arthur Bertsche, Pontiac; L. J. Sutter, Lexington; A. E. Burwash, Champaign; J. Fred Romine, Tuscola; Erwin Isenberg, Alhambra; C. J. Elliott, Streator; K. T. Smith, Greenfield, and Homer Curtiss, Stockton.

Illinois Grain Terminals Company

New directors: D. L. Clarke, New Berlin, who succeeds M. W. Warren, Mansfield, and Chris Studley, Sheffield, who succeeds W. Attig, Ashton.

Directors re-elected: Homer Curtiss, Stockton; Charles Schmitt, Beason; Arthur Burwash, Champaign; C. J. Diehl, Columbia; Marion Herzog, Blandinsville; James F. Holderman, Morris, and J. Howard Stone, Mason City.

Country Mutual Fire Insurance Company

New director: C. H. McCord, Newton, who succeeds Otto Steffey, Stronghurst.

Directors re-elected: George F. Hayes, Galva; J. M. Beckett, Blue Mound, and Albert Webb, Ewing, all elected for three-year terms.

Prairie Farms Creameries

New directors: Ren Williamson, Mt. Carroll, who succeeds D. L. Garber, Mt. Carroll, and Earl M. Hughes, Woodstock, who succeeds Chester McCord, Newton.

Directors re-elected: Elmer Orendorff, Randolph; E. A. Fosse, Marion; T. L. Loveless, Gillespie; A. Oliver Bower, Bushton; Harry Gehring, Altona; H. J. Schumacher, Toluca; Carl Geiger, Milan; Henry Vollmer, Quincy, and John Sterchi, Olney.

Illinois Milk Producers Association

New directors: Bart Walsh, DeKalb; Ray Peart, Galesburg; R. E. Stocker, Murrayville; Paul Bainbridge, Rockford; Walter Dodd, Loami; Carl Geiger, Milan, and Elmer Orendorff, Randolph.

Directors re-elected: Delbert Freeman, Canton; George I. Maxwell, Champaign; J. Warren Ellis, Ridge Farm; Ray H. Miller, Clinton; Dean H. Radford, Kewanee; O. H. Ryan, Tonica; Charles Cameron, Peoria; Carl Eisele, Peoria; Mattie Nolan, Pontiac; Anthony Grawe, Quincy; Charles W. Krell, Glenarm; W. J. Swayer, Gurnee; Julian Ray, Vandalia; L. B. Coomber, Freeport; Glen D. Tombaugh, Streator.

Illinois Milk Producers Supply Company

New directors: Harry Gehring, Altona; Thad Loveless, Gillespie; Charles Cameron, Peoria; O. H. Ryan, Tonica, and Earl M. Hughes, Woodstock.

Masching Named Claims Supervisor For Country Fire

CHARLES C. MASCHING, native of Livingston county, and former organization director and special agent in Tazewell county, began work Dec. 1 as claims supervisor with the Country Mutual Fire Company, associated company of the Illinois Agricultural Association.

C. C. Masching

Masching served as general agent in Tazewell county from 1938 until 1942 when he entered the army. After three years in service with eight months of it in England, Masching returned to Tazewell county in October, 1945, as organization director and special agent. In June, 1947, he resigned as organization director and spent his full time as special agent.

From 1936 to 1938, Masching was a fieldman for the insurance service department of the three IAA associated insurance companies. From 1932 to 1936 he was a cow tester in several Illinois counties, with two and one-half years spent in Effingham county where he helped to organize a dairy improvement association.

Masching is the son of Mr. and Mrs. John Masching, who farm near Odell.

Schools Conference Scans Recent Progress

WHAT happens to the bonded debt of a district after reorganization? What about township trustees and treasurers? What are the duties of the county superintendent under the county 12-grade unit plan? How will reorganization affect real estate taxes of farmers? These are some of the questions asked at the IAA schools conference held in the Bishop Tuttle Memorial Temple in St. Louis on Wednesday, Nov. 19.

Approximately 350 farm leaders attended the conference including eight members of the original IAA state Schools Committee, numerous county school survey committee members and a number of prominent guests representing statewide organizations.

Included in the latter group were the following: Luther Black — secretary, Illinois State Examining Board, representing Vernon L. Nickell; Irving Pearson — executive secretary, Illinois Education Association; Harlan Beem — county superintendent of schools of Coles county, past president of the Illinois Association of County Superintendents; Mrs. Oplinger — first vice president, Illinois Congress of Parents and Teachers; Dr. Eugene Fair — dean, Southern Illinois University, Carbondale; Paul C. Johnson — editor, Prairie Farmer; Mrs. Will Parks — Illinois Home Bureau Federation and state advisory commission; Mrs. William F. Bennett — first vice president, Illinois Federation of Women's Clubs; Dr. D. E. Lindstrom — professor of rural sociology, College of Agriculture, University of Illinois.

Earl Hughes, member of the IAA board of directors and member of the McHenry County School Survey Committee, presided as chairman of the schools conference. After a brief welcome to the crowd, he spoke of the changes in farm living and its affect on schools. "We are in an industrial revolution on the farm," said Hughes. He continued, "We have seen the advance in the production of land. It has meant, folks, that we have had to farm larger units, to do more work and to use expensive tools to get the job done. We have seen gradual increases in farm operation. . . . It means we have to keep up to date in organization. It means larger units to get the job done on an economical basis. . . . We realize that the day of the small one-room school may be fast approaching an end."

School Legislation Progress

Chairman Hughes then called on John K. Cox, IAA director of the department of rural school relations, to discuss briefly recent school legislation and trends in school reorganization to date. Cox called attention to the strong preference expressed in the 44 tentative reports on file at that time for the 12 grade district either on the county or large community basis.

He referred to the School Survey Act and the Community Unit Act as being the two key acts of the school reorganization program. He mentioned the need of a collection of information to be placed in the hands of new school board members regarding duties, good school policies, etc., and added that not all of the advantages or possibilities of a new 12 grade district would be apparent or possible the first year or two but that the school patrons should consistently demand the best service possible under the 12 grade district.

In regard to the building programs made necessary by the wearing out of old buildings, by the increased enrollment due to war babies, and by reorganization, Cox advised caution against voting large bond issues, the period of payment of which might extend beyond the period of high incomes. He urged local people included in a new district to defer voting bond issues for buildings until the stability of the district and all its boundaries could be established. Said Cox: "We suggest that school districts make the most possible use of present buildings, consistent with sound educational practices, and consider the practicability of temporary housing where feasible."

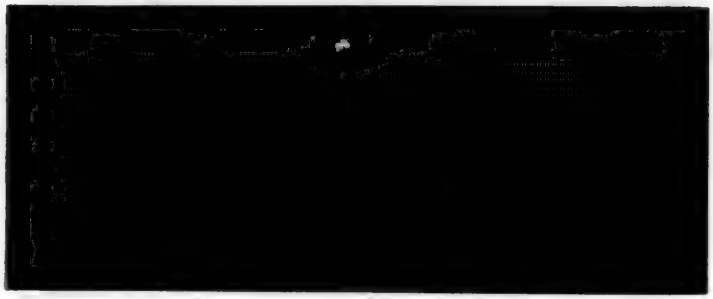
Community 12 Grade Unit

Hugh Rowden, chairman of the Montgomery County School Survey Committee, was asked by the chairman to discuss some of the problems encountered in setting up community 12 grade districts. Rowden mentioned the lack of understanding between town and country and the difficulty of drawing boundary lines as two of this committee's biggest problems. In referring to one of their recommendations which failed to carry, he attributed the failure to the

(*Continued on page 43*)

Schools is the subject as Henry Husser, Henry county, talks with John K. Cox, IAA director of rural school relations, during the rural schools conference held in conjunction with the IAA annual meeting in St. Louis. At left is Dennis Larson, Henry, and at right Harry Fiste, Bureau.

In animated conversation on the Illinois school situation is Mrs. W. S. Bennett of Flora, vice president of the Illinois Federation of Women's Clubs, with Harlan Beem, Coles county superintendent of schools. At upper left is John Butterfield of Christian county. Others are unidentified.



UNANIMOUS approval for continued state aid grants for farm roads was expressed by the 500 farmers attending the property taxation and farm-to-highway roads conference held during the Illinois Agricultural Association convention in St. Louis.

Farmers at the meeting agreed on the need for a long-range continuous program for farm road financed in part by state money. It was pointed out that local property taxes at present finance 75 per cent of the road mileage in the state's farm-to-highway road system.

These sentiments were confirmed during the meeting by an informal vote taken by Charles Mayfield, IAA director of road improvement.

'Study All Systems'

Addressing the group briefly Mayfield said: "Farmers are demanding that Illinois should have a long-range program of highway development consistent with and measured by the taxpayers' willingness and ability to pay. However, we cannot hope to reach the ideal in road development over night because tax and revenue resources are not limitless."

C. J. Elliot, IAA director from Streator who presided at the conference, said that he felt the Illinois Agricultural Association should study all the road systems in the state and make recommendations for farm-to-market roads that would be consistent with fair support of the state hard road and county systems.

It was suggested during the meeting that if the federal government would remove its one and one-half cent tax on every gallon of gasoline and withdraw from the field of taxing motor fuels, Illinois could take over that portion of the tax and put it in a form of revenue for rural roads.

It was also pointed out that many of the more than 1600 road districts could profitably combine and thus offer better road service to the people living on rural roads.

Some farmers during the conference stated that the main trouble in their road districts was that the road commissioner did not have enough money to spend. Others said that he had enough, but that he did not spend it wisely. Still others said that their road commissioner was not a road man and could never give satisfaction regardless of money or other conditions.

C. J. Elliott

In discussing the new tax legislation passed during the 1947 session of the Illinois General Assembly Bert Vandervliet, IAA director of property taxation, said that where local governing bodies in rural Illinois levied maximum amounts in 1946, under the Butler tax laws, or when maximum amounts were levied in 1947 prior to July 22, tax bills payable in 1948 may exceed those paid in 1947.

In other communities 1947 taxes will be materially reduced, he said, depending upon the amount of the 1947 tax levies, the time the levies were adopted, and variable trends in real estate values between counties.

At the conference several farmers expressed concern over the possibility of losing home rule as school districts and road districts become larger through reorganization.

"The principle of home rule is beyond argument," Vandervliet said. "But you have home rule only when it is exercised by the voters. Few citizens attend the annual town meeting. Few attend public hearings on local budgets.

"As a matter of fact there is reason to believe that home rule may be greatly implemented and strengthened by reducing the number of local governments.

Uniform Assessments

It might make it easier for citizens to exercise direct control of their local government."

Vandervliet said that the tax legislation passed during the 1945 Illinois General Assembly had done a great deal toward securing uniform assessments between counties, but that it had not in any manner contributed to leveling out assessments within the individual county.

Turning to the field of taxes in general Vandervliet said: "There is every reason to believe that the cost of our state and local governments will continue to rise.

"Often our attention is directed to federal affairs and we do not give enough thought to our taxes at home," he concluded.

Illinois delegates to the National 4-H Club Congress in Chicago in December were, Front row, left to right: Barbara Heath, Gallatin county; Lawrence A. Gregory, DuPage; Dorothy Giese, LaSalle; Robert W. Bulta, McLean; Evelyn Love, Macoupin; Alfred DeCap, Whiteside; Doris Chelin, Bureau; Robert Lindquist, Henry; Evelyn Mollet, Bond; William Worthington, Livingston. Second row: Harley Harris, local leader, Pulaski; Bernadine Lambert, Morgan; Ronald Hack, Will; Marian Ruetor, Scott; Kenneth Cook, DeKalb; Carleen Densch, Saline; William McDonald, Winnebago; Miss Anna Searl, state 4-H office; F. Henninger, Boone; Sue Holcott, LaSalle; Bill Simon, Bureau; Mary Tracy, Jersey; and William R. Hobson, Greene.

RAPID EXPANSION

MADE BY MARKETING YARDS

IN '47

Map shows results of Illinois Livestock Marketing Association expansion program during the past fiscal year. Lines radiate from state sales office at Decatur. Stars show old established buying points. Squares indicate buying points established since the past fiscal year. Circles show where buying points are being set up.

WOULD you like to sell your hogs in your home town through your own cooperative? Livestock farmers are saying yes to this question by their increased support of the Illinois Livestock Marketing Association in its enlarged hog buying program.

The Illinois Livestock Marketing Association cannot reach every farmer yet but they are expanding rapidly into a statewide marketing cooperative by setting up farmer-owned buying points for hogs.

W. R. Cummins

At their annual meeting in St. Louis President Mont Fox indicated how well farmers are responding to this expanding program. "They have given the association its biggest year. We handled about a quarter of a million hogs," he said. "In all we sold about $15,000,000 worth of livestock."

There is one big difference. These new cooperatives buy and pay for hogs right at the yards. All hogs are then sold for the local yard by the state sales force in Decatur.

These new cooperatives have had the benefit of years of experience of their parent marketing agency, the Illinois Livestock Marketing Association which was organized back in 1931.

It was based on six county marketing associations which formed the nucleus of the state company. These original county-wide companies are going strong and continue to expand. They are located in central and east central Illinois at Bloomington, Champaign, Decatur, Danville, Shelbyville and Paris.

W. R. Cummins, manager of the Producers Marketing Association, Indianapolis, in discussing a pilot packing plant, said farmers should develop their outlets for meats before going too heavily into the packing business, suggesting we needed hams and bacons on Prairie Farms milk trucks.

President Fox's address read like a real progress report. "By next year the services of Illinois Livestock will have been extended to 20 points in Illinois," he predicted. "Most of these points are county-wide in scope. Compare this with last year when only six county companies were in operation."

For the coming year these county-wide marketing associations will content themselves with buying only hogs from their farmer members. "We probably won't be able to broaden our sales service to cover cattle. But we may be able to offer feeder cattle to our members by the time the feeder season rolls around next fall," Fox said.

In his review of the year's activity of the marketing cooperative Manager H. W. Trautmann of Decatur said their new expansion program had hardly reached the grass roots until his office was "besieged with requests" asking for help in setting up these local marketing cooperatives.

Co-ops Spring Up

The first of these cooperatives to organize last year was started in Stronghurst on Jan. 6 under the name of the Henderson Livestock Marketing Association. It has been a success since the day it started.

Other county marketing cooperatives were not long in following. The Stephenson Livestock Marketing Association opened at Freeport Feb. 3 and have since opened a branch point at Lena. Adams County Marketing Association started in Quincy June 23, Hancock county at Elvaston on July 14, and Mercer county in Aledo July 23.

Others have incorporated and have been buying and shipping for a short time. Scott county started at Bluffs Oct. 1, Schuyler at Rushville Oct. 13, Henry county at Cambridge Nov. 3, and Whiteside at Erie Nov. 17.

The success of the program was indicated by members at the annual meeting. Stockmen said that the new co-ops were often able to raise day-by-day hog prices by 50 cents a hundred. Some said 50 cents was too low. A dollar a hundred, they reported, was not uncommon.

Farmers can now sell through this newly expanded cooperative service, at yards located in these cities: Bloomington, Champaign, Decatur, Danville, Shelbyville, Paris, Effingham, Stronghurst, Aledo, Bluffs, Rushville, Cambridge, Erie, Quincy, Elvaston, Freeport, and Lena.

Commenting on last year's market, Trautmann said: "We have been able to help our member yards through a maze of tricky markets that at times slipped $1 or $2, or even more, in a single trading day without appreciable loss to our members and without much let-up of buying."

Trautmann said it cost 15.7 cents a head to market through Illinois Livestock this year. The 249,935 animals which cleared the sales office sold for $15,289,305.15. Farmers were charged one fourth of one per cent, $38,853.28, to handle this livestock.

Part of this was returned as patronage dividends to member yards. Checks amounting to $5,019.40 were mailed to member yards as patronage dividends.

FARMERS WANT LONG RANGE ROAD PROGRAM

Field Editor, IAA RECORD

IAA Grain Co-ops Hit New Highs in 1947

THE AMERICAN farmer has a fair prospect for food exports higher than the pre-war level for many years ahead, Roy Hendrickson, Washington representative of the National Federation of Grain Cooperatives, told members of the Illinois Grain Corporation at their annual meeting held recently in St. Louis.

Roy Hendrickson

"Our grain exports will be needed to meet deficits for several years ahead because such surpluses as Eastern Europe may develop will not, because of Russian domination there, be available to feed Western Europe as was the case before the war," Hendrickson told his farm audience.

From a close study of the areas which he had visited Hendrickson said he has come to the conclusion that this winter will be the season of greatest need since the start of the war.

"The hunger of Western Europe," Hendrickson said, "provides a picture of desperate human need. Food is critically needed in Italy, Greece, France, and the Army-occupied areas of Germany, Austria, and Japan, and almost as badly needed in Belgium, The Netherlands, Norway, Finland and the United Kingdom."

He attributed this year's shortage to the severe winter weather in 1946-47 that killed crops in the ground, followed by floods and poor growing weather, and abated by a discouraging array of troubles that plague Europe.

President Charles Schmitt of Beason, reviewing the year's business activity of the grain organization, told members at the annual meeting that their cooperative had earned more than one million dollars this year, a record for the company.

Handling last year's bumper corn and soybean crop gave Illinois Grain Corporation its greatest volume. It sold 32,000,000 bushels of grain for its member elevators.

Illinois Grain Corporation, a cooperative commission company, operates on the Chicago Board of Trade, the St. Louis Merchants Exchange, and the Peoria Board of Trade, principal terminal grain markets. It is owned and controlled by Illinois grain producers through their local elevators and county Farm Bureaus. It is an associated company of the Illinois Agricultural Association.

At the meeting patronage refunds on earnings amounting to nearly one and one-half cents per bushel were announced. These savings totaled $475,517 and will be passed back to members in the form of cash and class "C" preferred stock.

The volume of 32,000,000 bushels was almost double last year's 16,500,000 but reflects also the increase resulting from handling the grain of a large farmers cooperative in Des Moines.

This year, because of its volume of business, the office of the Illinois Grain Corporation was moved into the Chicago Board of Trade building at the time the Illinois Agricultural Association moved to its new home at 43 E. Ohio street.

IOWA farmers are earning from three to five cents a bushel by handling their grain cooperatively through a grain terminals organization.

This was the picture presented to Illinois farmers by Fred Maywald, manager of the grain department of the Farmers Grain Dealers Association of Iowa.

Homer Curtiss

He spoke during the first annual meeting of the Illinois Grain Terminals Company held during the recent Illinois Agricultural Association convention in St. Louis and presided over by President Homer Curtiss, JoDaviess county.

"Terminal operations and grain merchandizing have paid well in recent years," Maywald said. "We reported net earnings of 5¼ cents a bushel to our members in 1946 and a little less than 3 cents last year."

An Indiana cooperative, he said, has had similar savings during the past five years with net savings ranging from 2 to 8 cents a bushel.

Speaking of the advantages inherent in grain merchandising, Maywald said it gives grain farmers a terminal market outlet, a step farther than local elevators can take toward final sale to processors.

A terminal elevator in turn gives farmers a chance to take advantage of day by day market conditions, he said, and helps particularly with such practices as grain blending, or mixing various grades of grain, to produce a more marketable product.

Reporting on Illinois Grain Terminals Company, Manager George Iftner

H. P. Joy, Morgan county, rises to ask a question at the Illinois Grain Terminals meeting during the IAA convention in St. Louis.

said the company is about ready to go with its merchandising program. Much of the work of organizing has been completed.

Three river and 27 county grain marketing companies have been incorporated into the new company which will be state-wide in its operations.

Illinois Grain is a state-wide grain cooperative that will handle the grain of its members from farm to final market, the processor, through county and river terminal elevators being built along principal Illinois waterways.

"We will limit our operations to the terminal marketing of grain and will not duplicate services now offered by Illinois Grain Corporation which was set up to engage in the commission and brokerage business at terminal markets," Iftner said.

The first of the river terminal elevators to start operating this year was Western Illinois Grain Company at Dallas City. They handled about three quarters of a million bushels of corn, oats, wheat and soybeans in their first eight months of operation.

Havana River Grain Company, also a river company, has been in business about six months. It will handle well over a half million bushels of grain, Iftner predicted.

The Producers River Grain Company of Morris was organized in August. Iftner said that it had not started to operate at the time of the annual meeting.

The Prairie Grain Company recently finished pouring concrete on a new 140,000-bushel elevator at Hennepin. It will soon start work on a similar elevator at Lacon.

A number of county-wide elevator companies are in operation, Iftner said. They include Henry, Stark, Knox, Bond, Montgomery, Lee, Champaign, Moultrie, Jersey, Coles, Schuyler, Monroe, Grundy, Livingston, Macoupin, Hancock, Mason, Ford, LaSalle, and St. Clair.

Honor Three Farm Advisers

THREE Illinois farm advisers were among 90 throughout the nation to receive the Distinguished Service Award from the National County Agents Association at a banquet during their annual convention held in Chicago Dec. 2 at the Edgewater Beach Hotel.

The Illinoians honored for outstanding work in the extension service were Edwin Bay, Sangamon county, Harold N. Myers, DeWitt county, and Frank H. Shuman, farm adviser for Whiteside county. All three were graduated from the College of Agriculture at the University of Illinois in 1921.

The citation which announced that Farm Adviser Ed Bay had received the Distinguished Service Award was worded: "He has carried on for many years an aggressive and successful soil improvement program and has done an outstanding job in 4-H club activities. He has taken an active part in working for the improvement and advancement of the profession of the farm adviser." Bay has been in extension work and farm adviser in Sangamon county since 1926.

Harold N. Myers, farm adviser in DeWitt county since 1929, was honored because "he has carried on a well balanced extension educational program and his leadership has influenced the farm people to help themselves in adapting production and marketing problems to present day situations." Before going to DeWitt county, Myers served as farm adviser in Edwards county from 1927 to 1929.

The citation for Farm Adviser Frank Shuman read: "He is recognized for his leadership in developing a well-rounded soil improvement program in Whiteside county. He is a firm believer in the extension philosophy of furnishing people with factual information which will enable them to find a solution to their own problems. Shuman has also carried on educational programs dealing with farm family living and youth programs which have been highly successful."

Sangamon County Farm Adviser Edwin Bay is shown in a rare mood at the National County Agents Association meeting at Edgewater Beach Hotel in Chicago. He was one of three Illinois farm advisers honored at the meeting.

One of the Illinois farm advisers honored at the annual meeting of the National County Agents Association in Chicago was DeWitt County Farm Adviser Harold Myers (second from left). Others in picture are Mrs. George Reid, Rock Island county (left); Mrs. Myers, and O. O. Mowery, Macoupin county farm adviser.

LOCKER CO-OPS EXPANDING BY LEAPS AND BOUNDS

Dana Cryder, Kendall county, president of Illinois Cooperative Locker Association, presides at the association's annual meeting in St. Louis. Seated is Frank Gougler of the IAA marketing division.

A $1,250,000 building program is planned for this year by county locker companies which have grown in recent years by leaps and bounds, Dana Cryder of Minooka, president of the Illinois Cooperative Locker Association, told members at their annual meeting in St. Louis.

The Illinois Cooperative Locker Association is associated with the Illinois Agricultural Association and held its annual meeting during the IAA convention in St. Louis.

Illinois farmers already own and operate 112 cooperative frozen food locker plants with a capacity of 50,000 lockers, Cryder said, and this should be increased to 65,000 by next year.

In addition to the locker plants 17 slaughter plants have been built at a cost averaging about $40,000 or more each and are used to butcher stock going into locker plants.

Discussing developments for next year Cryder said several counties, among them DeKalb and McLean, were considering building slaughter-processing plants similar to the new plant at Carlinville.

The Carlinville slaughter-processing plant is in effect a small packing plant serving an entire county. Completed recently at a cost of $100,000, it is considered a model plant of its kind.

Cryder said the plant is equipped to take a live hog from a farmer's feedlot by truck and return the carcass processed as ham or bacon — wrapped, labeled and frozen — to the farmer's local locker plant.

Throughout the state locker plants averaged a net saving of $2.67 for each locker, Cryder said, with total revenue averaging $25.66 per locker.

The value of lockers to the health of Illinois farmers Cryder believes, cannot be measured in dollars and cents. "We have too many people suffering from preventable malnutrition," he said. "This was brought to light during the war by the draft rejection of a high percentage of farm boys. We have a unique chance to serve our members and the general public by stressing human nutrition."

Turning to the business of operating locker plants, Cryder said: "Most of us have had our experience in operating farms. We haven't had a chance to learn the courtesies needed in operating a business.

"If we succeed in this cooperative locker venture, it is my firm conviction we learn more and more how to win and maintain a satisfactory relationship with our patrons. We must practice business principles."

Through equipment and supply sales to member companies, membership dues, and other sources the state office was able to pass back to member companies patronage refunds of $10,150.85.

Serum Co-op To Sell Biologics

BIOLOGICS and pharmaceuticals for farm animals will be handled for the first time next year by the Illinois Farm Bureau Serum Association. This was announced at their annual meeting held during the IAA annual convention in St. Louis.

In his address to members, President Russell McKee of Varna said the co-operative expects to sell at least 24 commonly used drugs and biologics and a rather complete line of instruments.

Russell V. McKee (above) of Marshall-Putnam county, president of the Farm Bureau Serum Association, makes his annual report at the annual meeting of the serum association.

These will be in addition to the hog cholera serum and virus which the association has handled for a number of years. New products include black leg bacterin, anti-swine erysipelas serum, and anti-hemorrhagic septicemia serum and bacterin.

In announcing the new program McKee said that farmers spend millions each year on remedies that are extremely limited in value. "In addition to wasting money," McKee said, "the use of worthless remedies gives farmers a false sense of security.

"It is the plan of your association," he said, "to handle only those reliable products whose beneficial effects have been scientifically proven in the treatment of animals."

The serum association will also stress preventive disease control. "We should always remember that it is much cheaper to prevent disease than to try to cure sick animals," McKee said.

To implement this enlarged program

(*Continued on page* 34)

WOOL GROWERS TO EXPAND

I AM SURE you will repeat the pattern of our success in Wisconsin now that you have enlarged your wool marketing program, Roy Richards, manager of the Wisconsin Cooperative Wool Growers Association, told Illinois sheepmen recently.

Speaking at the annual session of the Illinois Wool Growers Association held in St. Louis during the convention of the Illinois Agricultural Association, Richards said Wisconsin growers market two-thirds of their wool through their cooperative.

Roy Richards

"We used to think that the work of a wool co-op was seasonal," Richards said. "But we learned we needed a man on the job 12 months of the year."

"Wisconsin farmers were getting from 30-38 cents for their wool during the shearing season," he said, commenting on price. "The co-op this year will bring them at least 10 cents a pound more."

President William Temple of Serena said that the Illinois Wool Growers Association in hiring a full time manager hopes to offer sheep raisers an expanded marketing program for next year.

President William Temple of LaSalle addresses Wool Growers as Manager Dale Rouse glances at notes.

He said the association is negotiating to buy a warehouse this winter in a central location where Illinois wool can be graded and stored before final marketing.

Dale Rouse of Danville is the new manager. He has been a fieldman for the Illinois Livestock Marketing Association.

Reporting on the year's activities, Temple said the Wool Growers' Association marketed 210,000 pounds of wool cooperatively in 1947. This was an increase in volume of 64,000 pounds from the preceding year.

Temple said that wool growers will soon receive final settlement on this 1947 clip which will bring a few cents less than the 48 cents a pound paid last year.

The 1947 wool pool was handled in much the same way as a year ago. It was shipped directly to the warehouse of the Indiana Wool Growers Association where it was graded, stored, and prepared for sale.

Advances on the '47 clip were made according to grade. This was possible because of the support price on wool. Advances made were: medium native, 35c per pound; fine native, 27c; medium fed wool, 28c; fine fed wool, 22c; fine fed, 22c; rejects and stubby fine, 24c.

YES, '48 STANDS FOR A BETTER CHANCE TO BE A PROSPEROUS YEAR.

43 East Ohio St., Chicago 11, Illinois

LOCKER CO-OPS EXPANDING BY LEAPS AND BOUNDS

Dana Cryder, Kendall county, president of Illinois Cooperative Locker Association, presides at the association's annual meeting in St. Louis. Seated is Frank Gougler of the IAA marketing division.

A $1,250,000 building program is planned for this year by county locker companies which have grown in recent years by leaps and bounds, Dana Cryder of Minooka, president of the Illinois Cooperative Locker Association, told members at their annual meeting in St. Louis.

The Illinois Cooperative Locker Association is associated with the Illinois Agricultural Association and held its annual meeting during the IAA convention in St. Louis.

Illinois farmers already own and operate 112 cooperative frozen food locker plants with a capacity of 50,000 lockers, Cryder said, and this should be increased to 65,000 by next year.

In addition to the locker plants 17 slaughter plants have been built at a cost averaging about $40,000 or more each and are used to butcher stock going into locker plants.

Discussing developments for next year Cryder said several counties, among them DeKalb and McLean, were considering building slaughter-processing plants similar to the new plant at Carlinville.

The Carlinville slaughter-processing plant is in effect a small packing plant serving an entire county. Completed recently at a cost of $100,000, it is considered a model plant of its kind.

Cryder said the plant is equipped to take a live hog from a farmer's feedlot by truck and return the carcass processed as ham or bacon — wrapped, labeled and frozen — to the farmer's local locker plant.

Throughout the state locker plants averaged a net saving of $2.67 for each locker, Cryder said, with total revenue averaging $25.66 per locker.

The value of lockers to the health of Illinois farmers Cryder believes, cannot be measured in dollars and cents. "We have too many people suffering from preventable malnutrition," he said. "This was brought to light during the war by the draft rejection of a high percentage of farm boys. We have a unique chance to serve our members and the general public by stressing human nutrition."

Turning to the business of operating locker plants, Cryder said: "Most of us have had our experience in operating farms. We haven't had a chance to learn the courtesies needed in operating a business.

"If we succeed in this cooperative locker venture, it is my firm conviction we learn more and more how to win and maintain a satisfactory relationship with our patrons. We must practice business principles."

Through equipment and supply sales to member companies, membership dues, and other sources the state office was able to pass back to member companies patronage refunds of $10,150.85.

Serum Co-op To Sell Biologics

BIOLOGICS and pharmaceuticals for farm animals will be handled for the first time next year by the Illinois Farm Bureau Serum Association. This was announced at their annual meeting held during the IAA annual convention in St. Louis.

In his address to members, President Russell McKee of Varna said the co-operative expects to sell at least 24 commonly used drugs and biologics and a rather complete line of instruments.

Russell V. McKee (above) of Marshall-Putnam county, president of the Farm Bureau Serum Association, makes his annual report at the annual meeting of the serum association.

These will be in addition to the hog cholera serum and virus which the association has handled for a number of years. New products include black leg bacterin, anti-swine erysipelas serum, and anti-hemorrhagic septicemia serum and bacterin.

In announcing the new program McKee said that farmers spend millions each year on remedies that are extremely limited in value. "In addition to wasting money," McKee said, "the use of worthless remedies gives farmers a false sense of security.

"It is the plan of your association," he said, "to handle only those reliable products whose beneficial effects have been scientifically proven in the treatment of animals."

The serum association will also stress preventive disease control. "We should always remember that it is much cheaper to prevent disease than to try to cure sick animals," McKee said.

To implement this enlarged program

(*Continued on page* 34)

WOOL GROWERS TO EXPAND

I AM SURE you will repeat the pattern of our success in Wisconsin now that you have enlarged your wool marketing program, Roy Richards, manager of the Wisconsin Cooperative Wool Growers Association, told Illinois sheepmen recently.

Speaking at the annual session of the Illinois Wool Growers Association held in St. Louis during the convention of the Illinois Agricultural Association, Richards said Wisconsin growers market two-thirds of their wool through their cooperative.

Roy Richards

"We used to think that the work of a wool co-op was seasonal," Richards said. "But we learned we needed a man on the job 12 months of the year."

"Wisconsin farmers were getting from 30-38 cents for their wool during the shearing season," he said, commenting on price. "The co-op this year will bring them at least 10 cents a pound more."

President William Temple of Serena said that the Illinois Wool Growers Association in hiring a full time manager hopes to offer sheep raisers an expanded marketing program for next year.

President William Temple of LaSalle addresses Wool Growers as Manager Dale Rouse glances at notes.

He said the association is negotiating to buy a warehouse this winter in a central location where Illinois wool can be graded and stored before final marketing.

Dale Rouse of Danville is the new manager. He has been a fieldman for the Illinois Livestock Marketing Association.

Reporting on the year's activities, Temple said the Wool Growers' Association marketed 210,000 pounds of wool cooperatively in 1947. This was an increase in volume of 64,000 pounds from the preceding year.

Temple said that wool growers will soon receive final settlement on this 1947 clip which will bring a few cents less than the 48 cents a pound paid last year.

The 1947 wool pool was handled in much the same way as a year ago. It was shipped directly to the warehouse of the Indiana Wool Growers Association where it was graded, stored, and prepared for sale.

Farmers Lead The War On Animal Disease

Edwin Gumm, IAA director from Knox county, presides at the conference on safety, public health and animal health. At table are Dr. C. D. Van Houweling, IAA veterinarian (left), and W. W. Whitlock, IAA director of public health and safety.

HELD for the first time at an annual meeting of the Illinois Agricultural Association was the conference on Safety, Public Health, and Animal Health during the 1947 convention in St. Louis.

In introducing the directors of the IAA departments of public health and safety — W. W. Whitlock, and the department of veterinary medical relations — Dr. Don Van Houweling, Chairman Edwin Gumm, Knox county, said:

"Two of our newest departments of the IAA, headed by two of our youngest men, have been carrying on a valuable work, and are in a real position to render service to our membership. Let's avail ourselves of their services.

Whitlock showed a film which depicted the apathy of farm people to accidents and how it required a shock to jar them into taking action. He suggested that county Farm Bureaus might want to do something about accidents in their counties by organizing safety councils to keep farm safety constantly before the farmers in the county. A number of men in the audience approved the idea.

Dr. Van Houweling also showed a film suggesting methods of preventing the spread of mastitis among dairy cattle. Van Houweling gave a short summary of the activities of the veterinary medical relations department in which he likened the work of veterinarians as a war against disease. He emphasized that the war against disease is never won completely, and that the farmer himself is the commanding officer in the campaign, and that the veterinarians and extension workers can help him only insofar as he would avail himself of their services.

Farm Adviser F. H. Shuman of Whiteside county described what his county had done in controlling mastitis. Shuman said greater cooperation was needed by all the people involved in the fight against animal disease.

PLANT FOOD NEED IS ACUTE

THE urgent need for the adoption of a national soil fertility program by Congress was graphically portrayed by Donald Kirkpatrick, legal counsel for the Illinois Agricultural Association and American Farm Bureau Federation, at the national agricultural

K. T. Smith

H. E. Slusher

legislation conference of the IAA's annual meeting.

There is now a critical shortage of phosphorous and potassium, Kirkpatrick declared. "Farmers are taking out of the land five to six times the amount of phosphorous they are putting back and 10 times as much potassium," he pointed out.

Kirkpatrick charged the fertilizer industry with delinquency in building more plants to provide the needed supplies.

"Although we have in the United States 60 per cent of the phosphorus deposits of the world — enough to last for a 100 years — there have been practically no additional plant capacities in the last two and a half years."

Kirkpatrick also asserted that the plant life of the corn belt is showing substantial deficiencies in phosphorus.

Citing the great need of Illinois farmers for additional fertilizer production, Kirkpatrick reported that Illinois Farm Supply Company had authorized the building of a $1,500,000 phosphate acidulating and fertilizer mixing plant near Fairmont City, Madison county. This will be built on a 20-acre site along U.S. Highway 40. The plant will have a total annual capacity of 30,000 tons of mixed goods and 20,000 tons of superphosphate.

H. E. Slusher, president of the Missouri Farm Bureau Federation, outlined the proposed coordination of the soil conservation activities to the conference.

Slusher pointed out that under the proposed program, Farm Bureau is interested in getting the greatest amount of soil conservation possible for the money spent by the federal government. Chairman of the conference was IAA Director K. T. Smith, Greene county.

SERUM CO-OP TO EXPAND

(*Continued from page* 32)

the state serum cooperative has hired a full time manager, Cecil F. Musser, who had previously been manager of the Illinois Cooperative Locker Service.

These refunds were paid on a volume of 37,744,400 c.c. of serum and 3,140,375 c.c. of virus. This was compared with the previous year of 39,492,725 c.c. of serum and 3,362,900 c.c. of virus.

McKee said that 12 counties handled more than a million c.c. of serum last year. They were Knox, Henry, Warren, McLean, Fulton, Peoria, Pike, McDonough, LaSalle, DeKalb, Marshall, and Putnam. Knox was high with 2,067,000 c.c. of serum.

Musser said that farmers have done an excellent job in vaccinating their hogs and controlling hog cholera. He said the smallest number of trouble cases were reported this year than any in the company's history.

Retiring President R. H. Voorhees, Jersey county, presides at annual meeting of Illinois Agricultural Auditing Company in St. Louis. Others at table are (l. to r.) Carl Lage, B. H. Horan, Roy Edwards, George Metzger, Nancy Anderson, secretary, and Manager C. E. Strand.

Farmer-Owned Cooperatives Finish Greatest Year in Their History

THE 32 accountants who work for the Illinois Agricultural Auditing Association scanned the books on an estimated $250,000,000 worth of business transacted last year through cooperatives owned principally by Illinois farmers.

C. E. Strand, manager of this unique cooperative, an associated company of the Illinois Agricultural Association, reported at their annual meeting held during the IAA convention in St. Louis that this was the greatest year in history for farm cooperatives in Illinois, including the auditing cooperative.

Organized in 1924 as the first cooperative of the Illinois Agricultural Association, the auditing company this year handled the books for 471 member companies.

Its members consist of 92 Farm Bureaus, 67 Farm Bureau subsidiaries, 36 cold storage lockers, 98 grain elevators, 21 livestock companies, 85 service companies, 3 Home Bureaus, 31 dairies and creameries, 5 insurance companies, and 33 miscellaneous organizations.

Strand said it took 45,135 hours of work and 140,208 miles of travel to handle the work for this year.

G. E. MERKER JOINS IAA LEGAL STAFF

GEORGE E. MERKER of Harvey has joined the legal staff of the Illinois Agricultural Association under the direction of General Counsel Donald Kirkpatrick. He will be engaged in general law work for the Association.

G. E. Merker

Merker was born and reared in Chicago Heights where he attended local schools. He attended Thornton Junior College, the University of Chicago, and was graduated from the Kent College of Law, Chicago, in 1942.

He passed his bar exam in September 1942 and went into the army the following month. He served with the 90th Infantry in the Philippine and Okinawa campaigns and was discharged in January, 1946. Since his discharge, he has been practicing law as a partner in the firm of Adler and Merker of Harvey.

Southern Illinois Picks 4-H Camp At W. Frankfort

FARM advisers and home advisers representing 28 southern Illinois county Farm and Home Bureaus have unanimously approved the selection of a 4-H Club camp site at West Frankfort City Lake for the southern Illinois district.

The camp site, comprising an area of approximately 100 acres, was offered to the 28 southern Illinois counties by the Chamber of Commerce, the Kiwanis Club and the city council of West Frankfort.

Twenty-five acres of the site were given as an outright gift and the remaining 75 acres were offered on a 99-year lease agreement. Terms of the lease were scheduled to be drawn up the first part of December by Paul Mathias, IAA secretary, and representatives of the University of Illinois extension service.

The camp will be for the use of all rural young people's groups in southern Illinois. The lake on which the camp fronts is approximately 254 acres in area and will be an excellent site for swimming, fishing and boating.

The new camp will be the third in a series of four being laid out in the state. The northern Illinois camp is Camp Shaw-waw-nas-see in Kankakee county; the central Illinois camp is at Camp Allerton in Piatt county. A fourth camp is to be selected for western Illinois.

A group of southern Illinois farm advisers who took part in the meeting approving the selection of a 4-H Club district camp at Lake West Frankfort are shown together during the IAA convention in St. Louis. Left to right: Paul T. Wilson, Saline county; J. O. McCall, Perry; C. J. Christenson, Franklin; Don Lee, Jefferson; W. C. Anderson, Jackson; and Edward V. Barnes, Richland.

FRUIT GROWERS YEAR DOES NOT

FRUIT and vegetable growers have not enjoyed the same prosperity experienced by other farmers during 1947, L.L. Colvis, secretary of marketing for the Illinois Agricultural Association, said today.

Speaking at the marketing conference held in conjunction with the annual sessions of the Illinois Agricultural Association, Colvis said the Illinois crop moved two weeks late and ran into competition from other areas.

"It was a big crop," Colvis added, "and much of it matured in hot, dry weather which cut into its quality. Because of the late season there was considerable competition from other production areas which were not late."

Colvis also reported on the Illinois Fruit Growers' Exchange, an associated cooperative marketing association of the IAA that handles fruit and vegetables grown by its Southern Illinois members.

Colvis said that the total volume handled by the Exchange showed a nice increase this year. This volume was given as follows with the 1946 volume in parenthesis:

Peaches, 225,735 bu. (155,929); apples, 192,354 (198,839); strawberries, 23,141 crates (4,505); miscellaneous 6,719 (11,249).

The Exchange continued as sales agent for the Tri-County Peach Growers Association, handling most of the sales through the loading shed at Irvington, Colvis reported. The Edgar county Strawberry Association was again served, as was the Murphysboro Growers Association.

He said that in 1947 for the first time the Calhoun Apple Exchange reorganized and joined the Illinois Fruit Growers Exchange, transferring all its sales work to the Exchange. It was expected that more than 50,000 bushels of Calhoun county apples were sold by the Fruit Exchange before the end of the calendar year.

After being under construction for almost two years the 60,000 bushel cold storage building at Carbondale is now nearly completed and can be used. Colvis said that the entire space available was rented and if the capacity were

doubled it would not have been too large for its first year of operation.

The Fruit Growers Exchange has had three managers during the year. L. L. Colvis, who served for nearly six years as general manager of the Exchange as well as director of the Fruit and Vegetable Marketing Department of the IAA,

REFLECT GENERAL FARM PICTURE

resigned Feb. 1 to become Secretary of Marketing of the Illinois Agricultural Association.

He was succeeded by T. L. Davis who remained as general manager through the heavy end of the 1947 marketing season and upon his resignation Oct. 1 was succeeded by R. S. McBride, sale manager for the last two years. At the same time Dudley Klamp, assistant sales manager, was promoted to sales manager.

The Fruit Exchange Supply Company, a subsidiary of the Fruit Exchange, was expected to sell more than $700,000 worth of supplies this year.

Under the management of Fred B. Bierer, the supply company last year declared patronage dividend rates to members of 4 per cent on fertilizers, 4 per cent on blaskets, 7½ per cent on spray material, and 10 per cent on miscellaneous items. The supply subsidiary was organized in 1942.

STUDY NEW METHODS TO RETAIN QUALITY

A new study to find new and improved ways to avoid loss of quality in poultry meat and eggs has been launched by the U. S. Department of Agriculture.

A second study will seek to develop news ways of preparing and processing cooked poultry meat, especially turkey meat, and find more accurate methods for isolating microorganisms that might be present in eggs or egg products.

C.O.D. TO OPEN STORE

Raymond Montavon, for 10 years organization director for Lee county, has resigned to operate a grocery store he bought recently in DeKalb.

Scratched-away Profits!

When your livestock and poultry have to spend their time and energy scratching and fighting lice, mites and other insects, they're NOT scratching for YOU!

Stop this threat to health and waste of energy with

BLUE SEAL DRY DIP

Easy to use and harmless to livestock and poultry. Especially valuable during winter season when liquid dips would be harmful.

Ask your Blue Seal Trucksalesman.

How to KILL and CONTROL LICE and MITES

For HORSES and CATTLE

Simply sprinkle Blue Seal Dry Dip into the hair, using plenty along the back of the animal from head to tail, as this is where the lice are found in largest numbers. On cattle, be sure to sprinkle around base of horns and in depression at the base of the tail.... Also, sprinkle bedding with Dry Dip. Animals must be kept dry for at least 48 hours after applying Dry Dip to body.

For HOGS and POULTRY

Hog house should be cleaned of all litter. Sprinkle new bedding with Blue Seal Dry Dip. Brush into hair of hogs thoroughly and repeat frequently. Blue Seal Dry Dip is too strong to use directly on lousy hens, without mixing first with about two parts of road dust or ashes. Clean hen houses and sprinkle full strength around the roosts and in the nests.

STUDY NEW METHODS TO RETAIN QUALITY

A new study to find new and improved ways to avoid loss of quality in poultry meat and eggs has been launched by the U. S. Department of Agriculture.

A second study will seek to develop news ways of preparing and processing cooked poultry meat, especially turkey meat, and find more accurate methods for isolating microorganisms that might be present in eggs or egg products.

C.O.D. TO OPEN STORE

Raymond Montavon, for 10 years organization director for Lee county, has resigned to operate a grocery store he bought recently in DeKalb.

Scratched-away Profits!

When your livestock and poultry have to spend their time and energy scratching and fighting lice, mites and other insects, they're NOT scratching for YOU!

Stop this threat to health and waste of energy with

BLUE SEAL DRY DIP

Easy to use and harmless to livestock and poultry. Especially valuable during winter season when liquid dips would be harmful.

Ask your Blue Seal Trucksalesman.

How to KILL and CONTROL LICE and MITES

For HORSES and CATTLE

Simply sprinkle Blue Seal Dry Dip into the hair, using plenty along the back of the animal from head to tail, as this is where the lice are found in largest numbers. On cattle, be sure to sprinkle around base of horns and in depression at the base of the tail.... Also, sprinkle bedding with Dry Dip. Animals must be kept dry for at least 48 hours after applying Dry Dip to body.

For HOGS and POULTRY

Hog house should be cleaned of all litter. Sprinkle new bedding with Blue Seal Dry Dip. Brush into hair of hogs thoroughly and repeat frequently. Blue Seal Dry Dip is too strong to use directly on lousy hens, without mixing first with about two parts of road dust or ashes. Clean hen houses and sprinkle full strength around the roosts and in the nests.

(*Continued from page* 14)

quality products. These conditions exist as a result of serious nation-wide shortages, together with the continued tendency for control of these industries to drift into fewer hands. Again the Farm Bureau members in Illinois will make their decision as to the route to follow.

The Illinois Agricultural Association has had numerous requests from County Farm Bureau organizations, urging that an investigation be made of the need for a state cooperative purchasing program for seeds. A preliminary study has been made. Indications are that Illinois farmers in many areas do not have a dependable supply of high quality seeds available. Many seed handlers give very little attention to variety, adaptation, purity or certification. The Association plans to complete this investigation and possibly to develop a plan calling for action in the near future.

State Legislative Problems

The Illinois Agricultural Association actively represented Illinois farmers before the 65th session of the General Assembly at Springfield. I want to give special recognition to the Association's legislative committee for the effective manner in which they have represented your organization. There has, however, been a tendency on the part of some counties to take these results for granted. On legislation we must, in the future, have even more united support from local organizations.

I do not think it is overly critical to observe that during recent years the legislature has been inclined to postpone action on much of the important legislation to the last few hours of the session. This practice results in the passage of some bad legislation, the killing of many desirable bills and lends itself to political pressure tactics. It was the last minute legislative jam which resulted in killing the appropriation for the Veterinary College building and certain other measures supported by the Association.

One of the major accomplishments was the passage of an appropriation of $15,000,000 for farm to highway road construction purposes. In this connection, we should emphasize that a permanent long range program for lifting rural Illinois out of the mud must be developed. Continually increasing demands upon the state treasury from other sources will make it even more difficult to have an adequate local and secondary road program supported by direct appropriations. There is also some justification for criticism of the manner in which these funds are spent in many counties. These appropriations intended for a permanent road program are being used in some cases for maintenance or temporary improvement. Each County Farm Bureau should immediately find out how these road funds are being spent in their county and take steps to correct instances of misuse.

Pioneered School Reorganization

Illinois Agricultural Associaton has been the pioneer in the movement for school reorganization in Illinois. The progress has been remarkable. Legislation enacted by the last General Assembly, if properly used, will make possible still further progress. However, now is a proper time to "make haste slowly." Farmers should make sure that reorganization proposals are in the long time best interests of their children and the community. We should not lose sight of one of our original objectives, which was to improve rural educational opportunities and at the same time strengthen the rural community by binding it together with a community school system of adequate size. We should remember that there are many strictly rural communities capable of supporting an excellent well attended school and that no improvement in educational opportunity results from transferring rural children to an already over-crowded urban school. Another precaution that farmers should take is to be certain that they have adequate representation on the boards of education of the reorganized districts. Under the present property tax laws in Illinois, farm land will bear more than its fair share of the cost of many of the newly created districts. This could be a very serious situation if urban areas, paying a comparatively small proportion of the cost, were in control of the district.

Rural property taxes have increased at an alarming rate, due in part to the tendency of local taxing bodies to take advantage of the increased assessed valuations provided under the 100 per cent valuation laws. The Association joined with other groups to support legislation designed to place some reasonable limits upon these local taxing units. This legislation was enacted and it is hoped may result in some improvement.

National Problems

This year of 1947 has brought farmers of the entire nation a series of one crisis after another. Material, equipment and labor shortages have continued unabated. Prices and wages have raced upward in an inflationary spiral. The people of Europe and much of Asia are on the verge of starvation. Verbal strife and suspicion between nations increased to an alarming extent. In addition to all this, the United States and, in fact, the whole world, suffered one of the most unfavorable crop seasons in recent history. Despite all of these difficulties, there have been several constructive legislative steps taken by Congress that are of interest to farmers.

Legislative Accomplishments

Illinois Agricultural Association actively supported the American Farm Bureau Federation in its successful effort to secure passage of legislation designed to place reasonable regulations upon labor and other organizations. Farmers supported this legislation, not to hamper organization of labor, but rather to protect the economic well being of our Democracy from the destructive effects of the recent numerous and selfish battles for power between labor and industry.

A second major national legislative project which was supported actively by both your state and national organizations was the drive to reduce government expenditures. Representatives of your organization appeared before committees of Congress to suggest ways in which government expenses in agriculture and all other departments could be reduced. Careful studies were made to determine

☆

The St. Louis convention required plenty of walking so Mrs. Edward Carr of Fulton county stops to rest hers while hubby checks over the program to see what they'll take in next.

☆

where reductions could be made without seriously curtailing essential services. Many millions in savings were effected, yet very few of us have noticed any harmful curtailment in government activity. This should certainly indicate that even more drastic reductions would be appropriate.

A third victory for farmers was the passage of an appropriation to initiate an active research program under the Agricultural Research and Marketing Act. This legislation provides for an enlarged research program in production and marketing problems affecting all phases of agriculture. Advisory committees have been appointed and preliminary proposals submitted. Your organization has examined these suggested research projects and finds that most of them deal with production problems. We have strongly urged that greater emphasis be placed upon research in the fields of marketing and distribution.

Agricultural and the National Economy

Agriculture is keeping pace with all other segments of our national economy in technical improvements and efficiency. As a result, production is at the highest level in the history of America. We have reached these new heights of production despite the fact that the percentage of the population employed on farms has steadily declined. However, even after these shifts in population, agriculture remains today the most important single industry in our economy. The welfare of the farmer has considerable bearing upon the prosperity of all other groups in our nation. Conversely, agricultural prosperity depends upon a satisfactory level of consumer income.

Realizing the complexity of this situation and faced with the necessity of helping to formulate an improved long time farm program, your organization appointed a statewide committee of outstanding farmers to give careful study to the problems of future policy. This Economic Study Committee has completed its work and has presented its report. This report will be distributed to the counties in the near future for the consideration of the leadership. In approaching any problem on which there is such a divergence of opinion, it would be impossible to reach complete accord. Despite the fact that many of us will disagree with some of the conclusions of this Committee, I am sure that all will agree that the realistic thinking and discussions which this report will generate among farmers will be worthwhile. Bear in mind that it is a committee study for consideration only and that it is not intended to reflect the official position of Illinois Agricultural Association.

Is There a Need for a Farm Program?

We are living under a rather effectively controlled economy in America today. With governmental aid and encouragement, practically all business, industrial and labor groups are regulating and controlling their production in order to maintain the prices of their products. Agriculture is one of the few groups which has consistently followed a policy of abundant production. Even under the production controls of the AAA, farmers reduced their total production by only 5 per cent while industry with voluntary methods cut their output approximately 50 per cent. If industry and labor could and would continue production regardless of price level, there would probably be little need for special farm programs. There is nothing to indicate that industry and labor are ready to abandon their past policies.

Farmers have turned to government for aid in solving two very important and persistent problems during the last three decades. In the first place, the wide fluctuations in the general level of farm prices have resulted in ruinous "boom and bust" cycles. Farm prices fluctuate more rapidly and to greater extremes than do the prices of most other commodities. This condition alone destroys the stability of the industry. The second major problem is the chronic disparity which has existed between farm prices and non-agricultural prices. This disparity has persisted even during periods of relatively high prices and has resulted in an unfair division of the national income, with agriculture's share reduced below an equitable proportion. With these things in mind, let us turn to a consideration of some present problems and proposals.

Inflation and Price Cycles

The present price inflation is simply the current manifestation of the problem mentioned previously — the extremely wide fluctuations in price levels. A brief historical record reveals that farm prices move up and down very closely with the price level variations of all commodities and of consumer purchasing power. One of the most important steps toward permanent improvement of agriculture's economic condition would be some plan to eliminate the wide fluctuations in general price levels. Therefore, when we look for a cure for inflation, we are also looking for some method of securing greater general stability of prices and of consumer purchasing power.

Farmers have been thinking about this problem for a long time and are in somewhat general agreement as to a program for action. The first and most important need today is for full production by all groups — industry, agriculture and labor. Agriculture has already demonstrated its willingness to maintain production. We do not want to go back to the specific acreage control practices of the past, yet we are realistic enough to know that we may be forced to follow that route unless labor and industry are willing to produce abundantly. Many present restrictive practices whether encouraged by law or by industry-wide agreements should be abandoned by labor and industry. Again I repeat, there seems to be no indication that these groups are ready to give up these production control devices.

Governmental monetary and fiscal policies have a marked effect upon price levels. Let me cite a simple example. Our dollar bill, which would buy 280 pounds of shelled corn in 1932 will purchase only 25 pounds of the same corn today. In other words, the value of the dollar in terms of corn has fluctuated from 280 pounds down to 25 pounds. It should certainly be possible to devise some method or create some agency that can regulate the value of money to provide greater stability than now exists.

Price level peaks and pits could be somewhat leveled if government spending policies were more judiciously planned. During periods of high prices, governmental spending should be reduced, public construction delayed and federal debts reduced. The people should be encouraged to defer spending. The present leadership of farmers in continuing the purchase of government savings bonds is a good example of how the people can cooperate in fighting inflation by deferring spending.

Foreign trade policies have considerable effect upon the general level of prices as is well illustrated by present conditions. Your organization has supported the principles of the reciprocal trade program with the conviction that price level fluctuations could be modified if there were more freedom of exchange between nations. However, farmers should have a voice in the determination of the reciprocal agreements affecting their products.

Elimination of the long standing agricultural price disparity would do much to help maintain a high level of consumer purchasing power. Agriculture is the largest customer of labor and industry.

These are some of the fundamental remedies which all of America needs to use to help bring about a correction of some of the recurrent price cycle disasters.

IAA PRESIDENT SHUMAN ASKS FOR MORE PRODUCTION

(*Continued from page 39*)

Rationing and Price Control

The Congress of the United States is now considering the request of the President for authority to reimpose price ceilings and rationing on farm products and other commodities in short supply. The record of the Association is clear on this subject. We supported these price and rationing controls during the war as an emergency measure, but insisted that such controls must apply to all commodities and the wages of labor. At the end of the war after many exceptions to the restrictions had been granted, we took a position of leadership in demanding that the OPA and other wartime controls be ended. It would be a grave mistake to attempt to restore price control and rationing at this time. Past experience has demonstrated that this type of program cannot succeed unless all phases of our economy are rigidly controlled. The American people will not submit to this kind of regimentation during peacetime. I am sure that farmers will unite to vigorously oppose the return of rationing and price control.

Revision of Parity Formula

Let us now turn to some of the more specific problems facing agriculture. General recognition by the nation of the fundamental justice of the parity price concept for agricultural commodities is the greatest victory that organized agriculture has ever achieved. Farmers should fight to the finish any attempts to destroy this principle. At the same time, we are forced to recognize that changing conditions necessitate modernization of the actual formula. Present suggestions of a ten year moving average as an adjustment to the 1910-1914 base would seem to give most promise of correcting some unfair relationships that exist between individual commodities.

Coordination of Agencies

Conservation and rebuilding of our soil resources is a national responsibility, yet the farmer on the land is the only one who can actually do the job. The nation's responsibility is twofold; first, to see that an adequate research and educational program brings to the farmer the necessary knowledge of how to conserve the soil; second, to see that agricultural price disparities are corrected so that farmers are not forced to resort to soil mining in order to exist.

Soil conservation has been a very popular activity of government. As a result, several agencies under the U. S. Department of Agriculture are carrying on more or less duplicating programs. This has caused considerable confusion and waste. All of the government soil conservation activities should be combined under one agency. Research projects should be assigned to the recognized research institutions — the experiment stations. Educational and promotional activities should be administered by the Extension Service, which is the agency best fitted to do this work. These changes would not hamper the good work being done by the many local Soil Conservation Districts, but should in fact speed up the program. A more efficient and better coordinated program is essential if we are to turn the tide that is rapidly carrying us toward national soil poverty.

Costs of Distribution

One of the factors causing the serious long time disparity of farm prices is the constantly increasing cost of the distribution of farm products. The total costs of marketing, processing and distributing our products increase rapidly during inflationary cycles, but remain practically unchanged when prices fall. This condition is partly a result of the growth of monopolistic restraints and practices in the distribution industries and partly a result of resistance of labor to lower wages in periods of lower prices. Farmers should insist that the full power of government be used to break up these monopolies and controls. In addition, organized farmers have another very effective tool that they can use more effectively — their cooperatives, both marketing and purchasing.

Farm Cooperatives

Our agricultural cooperatives are being attacked vigorously by certain groups in business. Charges are being made that cooperatives are socialistic and that they have been successful because they have unfair tax exemption. Let us look at facts. A true farmer cooperative is of the very essence of democracy. It is in fact private business. Farmers have the same right to combine their resources and operate a business organization just as any other group has a right to combine their funds to operate a corporation.

The taxation issue is also easily answered. The distributed earnings of a cooperative, even if it is one which is completely exempt from Federal income tax, are taxable in the hands of the patron members. The question is whether these savings should be more heavily taxed before distribution to the patrons who are the owners of the business. Your Association, by resolution of the voting delegates has stated its position. It recognizes that earnings of cooperatives which are retained within the cooperative structure and not distributed as patronage dividends to members should be subject to the same treatment as funds so retained within the corporate structure of a private business corporation. However, cooperative earnings upon member business which are returned to members as patronage dividends, either in cash or stock, should not be subject to tax against the cooperative. Any private business corporation which makes advance agreements or a contract requiring the return of its profits to its customers as refunds can put itself in the same position. If it makes such agreements and makes the refunds, the private corporation would be entitled to deduct the amount of these refunds from its taxable income just as a cooperative is entitled to deduct the amount of the patronage refunds which it had paid from its taxable income. The income tax in both cases would be paid by the recipient of the refund.

Unless some of the inefficiencies and monopolistic practices of private business in the field of distribution are corrected, it will be necessary for farmers to provide the needed competition by greatly increasing their cooperative activities.

Emergency Agricultural Programs

Most of my discussion today has been based upon the hope that steps can be taken to avert the type of national disaster which fell upon us in the period 1929 to 1937. Agriculture must, however, be prepared for every contingency. The nature of this emergency program is the most controversial subject in agricultural circles today. There are some suggestions being made to the effect that all past programs be abandoned and a complete new theory used. I cannot agree with this reasoning. While it must be admitted that several of the programs tried in the past were not successful, yet there are many valuable features in the existing legislation. Farmers should not, and I am sure will not, give up such important instrumentalities as the parity price principle, the Commodity Credit Corporation and the marketing agreements provisions embodied in existing legislation. The wise course will be to build upon and improve our present agricultural legislation.

In this formative stage, it would be unfair for any individual to spell out any proposal in any considerable detail. Farmers' thinking will guide the course of agricultural legislation as no plan will

long be in force which they do not favor.

Briefly stated, here are some of the suggestions that seem to be gaining the most support. Specific crop acreage controls were neither popular nor effective when used before; it is suggested, therefore, that they be used only for certain specialized crops such as tobacco. A comparatively low level support price program is provided under present laws. It is suggested that these support prices should be on storable commodities only and that they be graduated so that continued increases in production would result in a lower price support. Accumulation of excess stocks might be checked by use of plans to increase consumption together with an export program. If these measures did not meet the need and the price collapse continued, a further emergency program would be necessary. Under these conditions, the nation might well insist that farmers adopt a drastic soil rebuilding program in exchange for continued price supports.

Many other suggestions are being made. One of them involves abandoning all price activity in favor of a direct payment from the federal treasury for all farmers. Many arguments for and against all of these suggestions could be presented. I hope that farmers never compromise the dignity and integrity of the oldest and most honored profession on earth by going on the government dole. Farmers are entitled to a parity price in the market place for their products. When we give up this right, we then take the first step towards becoming permanent wards of the state.

International Problems

Much of the world of today is sick and near complete degeneration as a result of war and its aftermath — starvation. Farmers are concerned that we make every reasonable effort to relieve suffering and assist other nations to become self-sufficient. They know that we in America cannot isolate ourselves from the rest of the world. Farmers suffer as much as any other group from the effects of war, thus they are hoping and praying that we may yet find a way to international brotherhood and permanent peace.

World Rehabilitation

Much of the present inflationary pressure on farm prices is due to our heavy exports of food to avert starvation abroad. The duration of this period of emergency exports will have much to do with the future course of agricultural prices. Farmers are sympathetic with the program to relieve the extreme distress that is so widespread. However, they realize that a price structure based upon a charity program of exports of gift goods to foreign nations is unsound. There is a limit to our capacity to produce and pay for these gifts. Because of these convictions, farmers are interested in the development of some plan designed to rehabilitate the war-torn units of the world economy. Trade, not charity, could be a basis for economic recovery in the world.

The plan suggested by General Marshall approaches the problem from the rehabilitation standpoint. It entails a huge responsibility and is probably beyond our capacities in some respects, yet it seems to be the most realistic proposal yet offered. In supporting the principle of this plan, we must be vigilant lest we cripple our own productive capacity by commitments to be filled by exports of critical materials and equipment. Farmers are willing to make sacrifices, but we should not deplete our material and equipment supplies to such an extent that the high level of domestic agricultural production is threatened.

The need for greater understanding and good will between groups is not confined to the field of international relations. We cannot expect the peoples of the world to live as brothers unless the various groups in America can live and work in harmony. The very existence of our democracy is threatened by the suspicion, distrust and practical state of warfare which now exists between the great economic groups in our own nation. The cause of this situation is the selfish determination of many powerful groups to obtain special advantages without consideration of the general welfare of all. Although agriculture is a minority group, we may, by precept and example, be of considerable influence in restoring an era of peaceful and sane thinking here at home in America.

Organized farmers will continue to insist that the program for agriculture must be in the best interests of the nation as a whole. The most effective way in which the farmers of Illinois and America can act to oppose the forces of unrest and the enemies of democracy is through the increase in strength and power of their own organization.

PLANT MORE IN '48

The government is asking farmers to plant nearly 6.5 per cent more land to livestock feed grains in 1948 in an effort to replenish supplies cut short by the poor 1947 corn crop. Tentative plans call for a corn-planting goal of 92,000,000 acres or 6.3 per cent higher than last year. The corn production goal is at least 3,000,000,000 bushels. The corn crop in 1947 was 2,458,674,000 bushels.

Eleven-Year-Old Wins IAA Safety Jingle Contest

HE'S ONLY 11 years old, but that didn't stop Ronald Humphrey of Harrisburg in Saline county from winning the IAA safety department's jingle contest in the November IAA RECORD. Ronald won the first prize of $15, W. W. Whitlock, director of the safety department, announced.

Ronald Humphrey

In the opinion of a board of six judges, Ronald's concluding couplet, "Just remember while driving, Make safety your aim," was the best of the entries.

The contest required concluding lines to be added to the following: "In following these rules, Most wrecks we'll avert: Make all the stops, Then no one'll get hurt; Drive at a speed Both reasonable and sane; Keep eyes on the road, Not crops up the lane; With good brakes and equipment, Few you will maim. . . . . ."

Other prize winners are: Second, Jean Stavros, Lake, $10; third, Charles E. Strode, Fulton, $5; fourth, Morton L. Fowler, Vermilion, $3; fifth, Mrs. C. N. Jamerson, White, $2; sixth, Daniel Vaubel, Tazewell, $1.

SCHMITT RE-ELECTED

FARM cooperatives of Illinois, Missouri, and Arkansas have re-elected Charles Schmitt, of Beason, Illinois, to a three-year term on the board of directors of the Farm Credit Administration of St. Louis. Schmitt is actively engaged in farming in Logan County and at present is president of the Illinois Grain Corporation.

As Farm Credit director, Schmitt will serve as a director of the Federal Land Bank, the Federal Intermediate Credit Bank, the Bank for Cooperatives and the Production Credit Corporation, all of St. Louis.

Other members of the seven-man farm credit board are: W. W. Martin, St. Louis, Chairman; Dr. M. F. Dickinson, Little Rock, Arkansas; Rufus Branch, Joiner, Arkansas; Fred A. Groves, Cape Girardeau, Missouri; Charles Klingner, Fair Grove, Missouri; Enos Waters, Carlinville, Illinois.

FARMERS OPPOSE RETURN TO CONTROLS

(*Continued from page 6*)

On animal health, the resolution reads in part: . . . . . "We must continue to recognize the dangers resulting from the promiscuous movement of diseased animals . . . . . If present statutes cannot effectively control the dissemination of animal diseases, such statutes should be strengthened by amendment."

Other highlights of the IAA convention in St. Louis included an evening of entertainment to a packed house at the Municipal Auditorium, a safe-driving contest for Rural Youth, the annual Rural Youth Talk Fest, and a radio quiz contest in which four Illinois men, President Shuman, Vice President Morris, Farm Adviser Truman May of Madison county, and A. O. Eckert of St. Clair county, were pitted against four Missouri Farm Bureau leaders. Illinois won.

Another group of Farm Bureau people appeared on the WLS Dinnerbell hour including IAA President Shuman, AFBF President O'Neal, former IAA President Earl C. Smith, IAA directors and organization men.

Attending the convention as observers were foreign agricultural students Kenneth Osborne, 21, of England, and Miguel Bechara, 30 of Brazil. Osborne was studying U. S. farm youth groups and Bechara was studying the relationships between farm organizations and the extension service.

Numerous conferences and annual meetings of the IAA's associated companies were held in conjunction with the convention. Members will find most of these important meetings covered fully in other pages of the RECORD.

FARM SUPPLY CO. HITS PEAK YEAR

(*Continued from page 10*)

cisions must be judged in the future — and judged they will be.

"Therefore, let us face the future with humility. Let us seriously consider our responsibilities to the people we serve. May we search diligently and carefully the basic objectives of this organization and, finding them, let us act with boldness and with courage."

During the morning session, President Fred E. Herndon reviewed the basic principles and fundamental policies that have blueprinted the Illinois Farm Supply Company's pattern of development and progress.

Prominent people in their relations with Illinois agriculture are shown on the speakers' platform during the Wednesday night session of the IAA convention.

At the afternoon session, Dr. Joseph G. Knapp, principal agricultural economist for the Cooperative Research and Service Division of Farm Credit Administration, gave a brief history of the company interpreting its progress in the eyes of an outsider who has watched its growth since 1934.

F. E. Herndon

C. H. Becker

All members of the board of directors were re-elected. They are: Glen Geiter, Dakota; George Chapple, Dwight; Charles Keslinger, Lafox; John P. White, Washington; Fred E. Herndon, Macomb, Frank J. Flynn, Murrayville; Jesse L. Beery, Cerro Gordo; J. P. Redman, Cairo; R. H. Monke, Litchfield; F. E. Morris, Buffalo; Otto Steffey, Stronghurst.

SCHOOLS CONFERENCE SCANS PROGRESS

(*Continued from page 27*)

lack of a common understanding on the part of rural and urban people.

"In Montgomery county," said Rowden, "We are recommending four community unit districts. Certainly the wishes of any school community should be taken into consideration because you are going to draw boundary lines. It is your responsibility, our responsibility to get those lines as nearly correct as possible without disturbing too many communities."

The chairman next called on Harlan Beem, past president of the Illinois Association of County Superintendents, to discuss the possibilities of the county 12 grade unit.

In the discussion period following, a number of questions arose pertaining to school reorganization, mainly of a legal nature. Answers to the questions asked above were attempted. Harlan Beem explained that although there was still some doubt about who pays the bonded debt of a district that has become a part of another district, yet the Attorney General has ruled that the bonded debt is spread over the entire new district. Harlan added, "But it will take a court case to decide this issue beyond doubt."

Luther Black answered the question regarding the future status of township treasurers and trustees by stating, "Reorganization into larger districts will not affect the school townships at all. If you have a consolidation you still have a treasurer and school trustees. It is the obligation of the school board that may be elected by that district to chose any one qualified treasurer to handle their funds in that new district. After the board selects a new treasurer, then the other treasurers will have nothing to do except handle the township funds."

In answer to what would be the county superintendents' duties under the county 12-grade plan, it was said that his duties would be supervisory as they are now, but that they would be somewhat simplified because of the fewer reports to handle.

As to whether reorganization of schools would increase the amount of financial support to be shouldered by farmers, Dr. Lindstrom said, "I feel that the valuation per child is not a good measure of comparable ability to support schools. In Champaign county, for example, 52 per cent are in Champaign-Urbana. A lot of these families have no or very little property. Therefore, the per child valuation is low whereas there are people living in town who own farms and have no children.

NEWS and VIEWS

Mrs. Leonard Killey, Warren county, speaks before the Home Bureau women's meeting during the IAA annual convention in St. Louis. Mrs. Killey spoke on the Amsterdam conference of the Associated Country Women of the World to which she was a delegate in September.

Home Bureau Is Host To Women At St. Louis

WE ARE not living in the atomic age — we are merely on the fringe of that era . . . only one phase, the destructive, has been demonstrated.

Such was the message brought to the women's session of the Illinois Agricultural Association's annual meeting by Dr. Carl C. Bracy, president, McKendree college, Lebanon, Ill.

Mrs. Milligan

Dr. Bracy also stressed the ideal of the "world community" which he said will be brought about only by men and women with great ideas and ideals.

An overflow crowd of 500 women jammed the Crystal Room of the Jefferson Hotel to attend the women's session with the Illinois Home Bureau Federation as hostess.

Miss Pearl Barnes, Federation president, in welcoming the women to the conference cited the friendship and understanding relationship which exists between the Federation and the IAA.

Mrs. Leonard J. Killey, Monmouth, Federation delegate to the meeting of the Associated Country Women of the World at Amsterdam, sketched the history of that world organization from the time that Mrs. Spencer Ewing, Bloomington, was the Illinois delegate in 1930 until the present day. The Amsterdam meeting, which was also attended by Mrs. R. E. Milligan, Urbana, and Mrs. Ewing as Illinois delegates, was aimed at strengthening the organization in the hopes of encouraging greater understanding and peace among nations.

Mrs. Milligan discussed the people of Holland whom she lived with while attending the Amsterdam conference and of their warm feeling for the people of America. Mrs. Raymond Sayre, Iowa, was elected president of the Associated Women at the Amsterdam conference.

Some 300 women enjoyed a conducted tour of St. Louis which Mrs. Stanly Castle, immediate past president of the Federation, arranged through the Chamber of Commerce.

St. Clair County Home Bureau provided special music for the women's session.

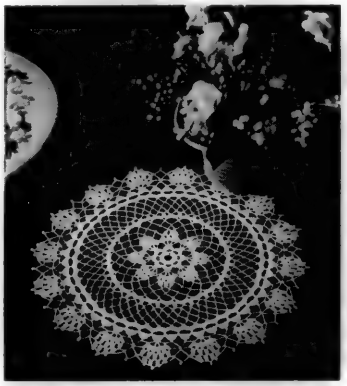
While the men tend to business, ther wives get together during IAA annual meeting. Left to right: Mrs. Russell Clatfelter, Crawford county; Mrs. Carl Ackerman, Crawford; Mrs. C. J. Elliott, La Salle; Mrs. K. T. Smith, Greene; Mrs. B. C. Failing, Crawford; Mrs. Charles B. Shuman, Moultrie; and Mrs. Earl C. Smith, Pike.

KANE GIVES SHOWER

The Big Rock Unit of the Kane County Farm Bureau, are giving a canned food shower for a family in Big Rock. The mother is in a sanitarium and the father died of a heart attack since she entered. The three children are carrying on at home alone.—Mrs. Elmer Flanders.

for HOMEMAKERS

ATTRACTIVE LACE



Small doilies make pleasant pickup work. They're useful in many ways — under lamps and vases, for your china closet, or in table settings. This ten-inch doily combining clusters, lacy loops and scallops makes a dainty accessory for any room. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

SEE CHICAGO IN TOUR

Fifty-five women from Kane county attended the Home Bureau's annual Chicago tour last fall conducted by the Chicago, Aurora and Elgin Railroad. They toured the Art Institute, ate lunch at the Merchandise Mart restaurant, went to the WMAQ radio studio for the "Ladies Be Seated" radio program, star gazed at the planetarium, saw the Chicago Daily Tribune prize homes, and completed the day by eating dinner and seeing the floor show at the Blackhawk.

STATE LEADS IN OLEO

Illinois leads all other states in the production of margarine, according to the University of Illinois bureau of economic and business research. Illinois produced 32 per cent of the U. S. total of 550,000,000 pounds of margerine in 1946. Thirty-six per cent of the Illinois soybean crop went into margerine in 1946. Nine of the nation's 45 margerine factories are in Illinois.

Farmers Make 'Very Nice' Husbands Say The Ladies

The farmer makes a pretty fine husband according to a recent nation-wide poll of farm women. The question asked was "What does your husband do that annoys you most?"

The survey, conducted for Successful Farming magazine, revealed that 14 per cent of the women interviewed could not think of one annoying thing worth mentioning of which their husbands were guilty.

The three high ranking peeves were husbands who track in mud and dirt from outside, which accounted for 34.7 per cent of the women's votes; husbands who forget things they are supposed to buy, and husbands who never pick up their clothes, each of the last rating 27.1 per cent of the annoyances.

Other complaints were against husbands who go to sleep on the davenport right after dinner, who read magazines while their wives are talking to them and who neglect to wash out the bathtub.

One woman said, "He laughs at me when I get mad," and another accused, "He wears his hat crooked and won't change it." Most of the women added qualifying statements such as, "He really is very nice, though" or "Little things like those mentioned above don't annoy me."

Honor 60 Members

The Grundy County Home Bureau completed their membership drive Nov. 15 by honoring 60 new members with a 3 + 1 luncheon. Mrs. R. E. Mulligan, federation music chairman, reviewed her trip to the Conference of Associated Country Women of the World held recently in Holland.

The program also included group singing led by Mrs. Milligan and accompanied by Mrs. R. A. Shively, as well as a piano duet by Mrs. Vietta Madison and Mrs. C. Watters of Mazon.

REINDEER APPLIQUÉ

Appliqué offers you an easy means of decorating your table linens. Make place mats of beige, appliqué with cocoa-colored reindeer. Brown embroidery floss outlines the grass and antlers. Four of these mats make a handsome gift for the bride or homemaker. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

NEW FABRICS IMPROVED

Many new fabrics are coming into the market that are sheer, strong, washable, require little or no ironing, and yet retain their original beauty and shape, Miss Beth Peterson, home economist, told members of the Stephenson County Home Bureau at a meeting held recently in the Farm Bureau building in Freeport.

She said also that the prices have been reduced on cellophane, and important packaging material for both home and commercially frozen foods. The ladies served coffee and assorted tea cookies and mints at the close of the program. Mrs. Chester Miller led the group in singing, accompanied on the piano by Miss Pauline Graybill.

PRATT IS NEW ADVISER

Miss Dorothy Pratt is the new home adviser in Washington county. She comes to Nashville from Boone county where she served as home advisor for more than a year. She is a home economics graduate from Iowa State College at Ames, Iowa.

RESOLUTIONS

(*Continued from page* 18)

cupational or Sales Tax be distributed to cities to assist them in meeting the increased costs of local government services. Counties, townships, school districts, and all other local governments have the same problem of increased costs. Such increased costs are only in part the cause of the financial difficulties of local governments. Such difficulties in part result from the demand for increased services from local governments. The Sales Tax is paid by all citizens, not merely by those living within the corporate limits of cities. It would be unfair to pay over to cities, taxes which have been paid by all citizens, many of whom reside outside the corporate limits of a city.

The Association has favored and supported substantial appropriations from State funds for support of schools, for public welfare institutions, for public aid and assistance and for the construction and maintenance of roads, highways and streets. These State funds have afforded a measure of relief to local taxpayers. While State appropriations and expenditures have greatly increased and not all such increases are merited, we must not reduce the funds available for State purposes to a point which will require the reimposition of a State property tax.

We oppose the distribution of State Sales Tax funds to cities for local governmental purposes.

XII. SCHOOLS

We reaffirm our previously expressed policy of encouraging the improvement of rural schools through the reorganization of school districts and other means. We recognize and approve the fine spirit in which most counties and communities have accepted their responsibility of carrying out the provisions of the County School Survey Law. We shall continue to extend to County Survey Committees and to local groups such assistance with their school problems as this organization can give. Reorganization and changes bring new problems. We urge the Board of Directors and officers of the Association to cooperate with interested groups in the discussion of these problems and in the preparation of legislation necessary for their solution.

XIII. SCHOOL BUILDING PROGRAMS

The Illinois Agricultural Association realizes that many school building programs will be proposed in the next few years. Some construction of new buildings will be necessary as a result of the wearing out of old buildings, the increase in the birth rate, and of school reorganization. Building costs are extremely high today. The Association urges caution in voting large bond issues, payable over a period which may extend beyond the current period of high incomes. The Association suggests that school districts make the best possible use of present buildings, consistent with sound educational practices, and consider the practicability of temporary housing wherever feasible.

XIV. ANIMAL DISEASE CONTROL

One hundred million dollars is a conservative estimate of the annual loss resulting from preventable animal diseases in Illinois. In addition, incalculable human suffering results from persons contracting diseases which are transmissible from animals to man. Almost all of these preventable animal diseases are spread chiefly by the movement of infected animals from farm to farm and state to state. Livestock disease control programs in Illinois recognize, and must continue to recognize, the dangers resulting from the promiscuous movement of diseased animals. Statutes governing the movement of infected animals and the testing and quarantine of imported animals must be rigidly enforced. We pledge our support to an intensive disease control program and will support the Division of Livestock Industry of the State Department of Agriculture in the strict enforcement of the laws relating to animal diseases. If present statutes cannot effectively control the dissemination of animal diseases, such statutes should be strengthened by amendment.

XV. VETERINARY COLLEGE

The Association has supported the establishment of a College of Veterinary Medicine at the University of Illinois, and appropriations for the necessary building and facilities. The college has been established but funds have not been made available for buildings and facilities. The need for the college and for well-trained veterinarians continues. It seems that facilities could be provided for beginning instruction to a number of students. We urge that provision be made for instruction to the maximum number of under-graduate students at the earliest possible date. We will continue to actively support this college and appropriations for suitable buildings and facilities.

XVI. ST. LOUIS MILK ORDINANCE

Illinois farmers produce more than 68% of the inspected Grade A milk delivered to the St. Louis metropolitan area. The number of shippers to the St. Louis market has decreased from approximately 10,000 to less than 3,300 during the last ten years. This situation exists despite the fact that other comparable markets have not shown a loss, but have shown an increase during this same period, in the number of shippers producing milk under the United States Standard Grade A Milk Ordinance.

We are informed that the Mayor of St. Louis has appointed a committee of representative citizens to study this situation and report on the matter. The Association will join with the Sanitary Milk Producers and the Missouri Farm Bureau Federation to assist in the presentation of facts in order that a common understanding may be reached, the St. Louis milk ordinance enforced fairly and reasonably and the confusion now existing removed.

XVII. MEMBERSHIP

145,851 Farm Bureau members in Illinois stand united in one of the greatest State farm organizations the world has ever known. A high percentage of all farm families in Illinois have expressed confidence and faith in the Farm Bureau.

The responsibilities of leadership in such an organization are sobering. The task of providing service to these members is huge. The potentials of organization influence are almost without limit.

Let us all resolve to devote ourselves more consciously and more earnestly to building not only an agriculture, reasonably prosperous, but a nation and a world dedicated to principles of Christian tolerance and peace.

Organize New Dairy Breeders Federation

Elbert Elsbury, Gurnee, Lake county, is the first president of the newly organized Illinois Dairy Breeding Federation. The group represents the three artificial breeding associations in Illinois located at Breese, Monticello and Dundee.

Other officers elected were J. B. Heinman, Trenton, Clinton county, vice-president, and C. S. Rhode, University of Illinois dairy extension specialist, secretary-treasurer.

To Each . . . His Own

Retirement means different things to different people . . . to some travel, to others a hobby, and to some it means merely working along at the job they love best. Retirement is not a time or place, but a state of mind that comes when you are financially secure and can do, not what you HAVE to do, but what you WANT to do. But in "play" as in work, you need a help-mate. That's why it is wise to plan for a reasonably early retirement, so that you and your life-long partner can look forward to many years of retirement TOGETHER. You owe that to each other. So why not plan NOW for those precious years together. See your friendly Country Life Insurance representative today at your Farm Bureau office. He has a retirement plan to fit your needs.

EUROPE — 'SKID ROW' OF THE WORLD

By President Charles B. Shuman

THE Europe of today and Chicago's West Madison Street "Skid Row" seem to have something in common. The beggars along our street of forgotten men have a new approach. The old plea of "A Dime for a Cup of Coffee" brought too many offers to buy the coffee. One night during the holiday window shopping season I was approached by a young man with a hard luck story and the request for 12c subway fare. When I offered to walk with him down to the ticket window and buy his fare, he hastily withdrew his request and hurried down the street in search of ready cash without stipulations.

Most European countries are in desperate straits today and their people face starvation. Most of our returning experts and observers tell us that in addition to hunger, one of the great handicaps to reconstruction is the broken spirit of the people.

The American people, and farmers in particular, are extremely generous and always ready to help those in distress. Certainly, we want to do everything possible to prevent starvation abroad. However, we must be very careful lest we start an international WPA that will hinder rather than hasten recovery.

The political leaders of Europe are like the Skid Row beggars, they want our money and food without any stipulations. Your organization is opposing this type of dole program and insisting that the most effective aid that we can give, beyond immediate starvation relief, is through a program designed to help restore the productive capacities and self respect of the people.

Our experiences during the past 15 years should convince us that, whether used in connection with a farm program, the WPA, the OPA, or any aid to Europe program, a subsidy or direct charity payment plan is a dangerous opiate. It destroys individual initiative and self respect.

We have a choice to make. We can use our dollars as a shot in the arm and possibly bear the responsibility for converting Europe into a huge permanent Skid Row or, on the other hand we can follow a less popular course, and insist that our continued aid be conditioned upon sound reconstruction plans.

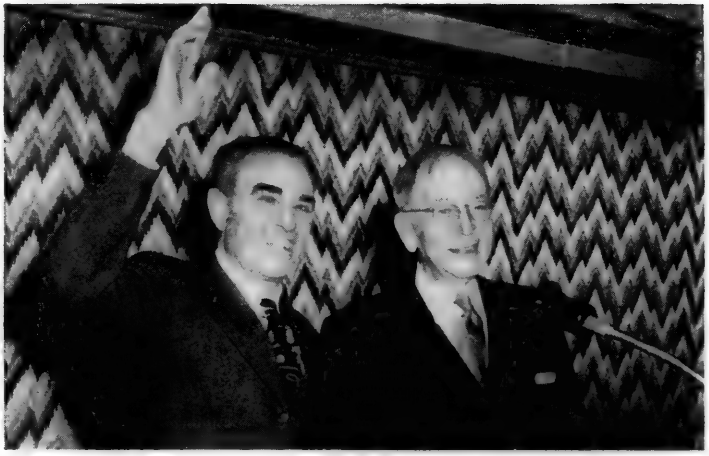
Allan Kline Succeeds Ed O'Neal as AFBF President



AFBF President Allan B. Kline and Retiring President Edward A. O'Neal.

President Charles B. Shuman (left) of the Illinois Agricultural Association is shown with David E. Lilienthal, chairman of the Atomic Energy Commission, during AFBF general session.

Counting votes on election of a vice president are, left to right: John Lacey, Don Parel, T. K. Cowden, and W. R. Ogg, all of the AFBF staff. Looking on are General Counsel Donald Kirkpatrick, Retiring President O'Neal, and Secretary-Treasurer Wilfred Shaw.

TO KEEP the American economy on an even keel, farmers must be assured fair prices for their products. This was a general view expressed by many of the prominent speakers appearing before the 29th annual convention of the American Farm Bureau Federation in Chicago in December.

Most significant event during the four-day convention attended by 5,000 people was the election of Allan B. Kline of Iowa to succeed Edward A. O'Neal of Alabama as president of the American Farm Bureau Federation.

Kline has been president of the Iowa Farm Bureau Federation for the past several years and vice president of the AFBF since Earl C. Smith of Illinois retired two years ago. Succeeding Kline as vice president of the AFBF is Romeo Short of Arkansas.

Emphasizing the importance of fair prices to the farmer, Earl C. Smith said: "If we do not sustain agriculture close to parity levels, as is the case now, we are not going to have a high national income. Unless we have a high national income, the government is not going to have revenue to reduce the national debt. Then we will have an insolvent country and when we have an insolvent country, we are right for dictatorship."

As during the war, nationally-known figures speaking at the convention emphasized the tremendous role the American farmer is playing in the battle against hunger and chaos — a battle, they emphasized, which was not yet won.

In a message to the convention, President Harry Truman congratulated the American farmer for his "great contribution to democracy, freedom and peace."

Looking for indications as to what the future holds for American agriculture, farmers attending the conference heard the president's message point out the great need abroad for American food until at least the 1948 harvest. This would seem to indicate that farm prices

will remain high during the greater part of this year.

More than 80 speakers addressed the 10 special commodity conferences, other meetings and the general sessions of the convention. Talks ranged from atomic energy's meaning for the future of agriculture to problems along such lines as insurance, farm youth organization, and Farm Bureau membership.

Twenty-three resolutions were adopted by the delegates to the convention, from the farmer's stand on international cooperation to an expression of appreciation to retiring President O'Neal for his 16 years of leadership with the organization.

Among the more important of the resolutions was the reiteration of the AFBF's stand on parity — the relationship between prices farmers get for the things they sell and the prices they pay for the things they buy.

"We favor the retention of the present parity formula with adjustments among various agricultural products according to price relationships which existed between the various products on the basis of a 10-year moving average."

Turning to the farm program, the AFBF warned: "We must not allow the existing national prosperity to lull us into a false sense of security, nor confuse our thinking, nor delay our work on a long-range agricultural program. . . . . Farmers have learned through bitter experience that an effective national farm program is essential. . . .to maintain agriculture on a basis of economic equality with industry, labor and other segments of our economy."

Pointing out that it wants the old program refined rather than junked, the Federation declared: "Agriculture has too much at stake to depend upon some new and untried farm program that would endanger the balanced relationships between agriculture and other segments of our economy."

On the question of controls, the resolu-

tions state: "When surpluses approach unmanageable proportions, farmers must have adequate programs to control and adjust supplies to prevent the wrecking of farm prices, destruction of farm buying power, and resulting unbalanced economy."

On price supports: "We favor a program based upon mandatory variable price supports for agricultural commodities. . . The level of such supports should vary from 60 per cent to 90 per cent of parity in accordance with the importance and peculiarity of the commodity and the supply and price position of the commodity."

Farm Bureau reiterated its position in favor of making the Commodity Credit Corporation a permanent agency but stressed that none of these funds should be used for consumer subsidies. Marketing agreements should be extended to certain other commodities not now covered and crop insurance programs should be experimented with before being extended to all areas of the country.

In his final appearance as AFBF president, O'Neal warned the Federation not to become a "business organization," for as such it would cease to speak for agriculture.

"It is impossible to review the past 25 years of farm progress without being profoundly impressed with the vastly increased standards of living on our farms," O'Neal said. "That represents an achievement of the goals of the Farm Bureau movement."

Warren R. Austin, U.S. representative to the United Nations, called for support of the Marshall Plan for European Recovery saying shortage of food causes physical deterioration and national frustration resulting in collectivism.

David E. Lilienthal, chairman of the Atomic Energy Commission, said a new world of knowledge is opening up for agriculture as a result of the release of atomic energy. Sen. Edward Thye of Minnesota summarized the main points brought out in Senate hearings for a long-range farm program.

Congressman Harold D. Cooley of North Carolina called for AFBF leadership in the merging, consolidating or coordinating of agricultural government agencies.

Other speakers included Dean H. P. Rusk of the University of Illinois; Charles F. Kettering, former research director of General Motors; Mrs. Raymond Sayre, president of the Associated Country Women of the World; and James Turner, president of the International Federation of Agricultural Producers, and president of the National Farmers' Union of England.

The Federation's highest honors — gold medals for distinguished service to agriculture — were awarded to Dean Rusk of the University of Illinois and Prof. B. H. Crocheron of the University of California.

Winner of the national Rural Youth Talk Fest was Howard Chattin of Vincennes, Ind. Chattin won top honors with his talk on agriculture's role in government.

☆ ☆ ☆

Dean H. P. Rusk Highest Honor by AFBF

(*See picture on page* 5)

THE gold medal for distinguished service to agriculture — highest honor conferred by the American Farm Bureau Federation — was awarded during the AFBF convention in Chicago to Dean H. P. Rusk of the University of Illinois College of Agriculture.

In presenting the award to Dean Rusk, Retiring AFBF President Edward A. O'Neal said: "To me his outstanding achievement has been his development and maintenance of proper relationships between the College of Agriculture, the Extension Service, government agencies and farm organizations. He insists that people working under him never lose sight of the major goal, which is to mobilize all of the power of all of the agencies so as to provide the utmost service to people on the land."

Dean Rusk has been associated with the College of Agriculture since 1910. He was born on a farm near Rantoul in 1884. He graduated from Valparaiso University in Indiana and received his bachelor of science degree from the University of Missouri College of Agriculture in 1908 and two years later received his master's degree there. He taught at Missouri and Purdue.

The distinguished service award also went to B. H. Crocheron, director of agricultural extension and agricultural economist of the Giannini Foundation, University of California.

Romeo Short of Arkansas addresses the convention following his election as AFBF vice president.

IAA Vice President F. E. Morris talks on WLS Dinner Bell Hour. At right is announcer Art Page.

Howard Chattin, Vincennes, Ind., talks himself to national Talk Fest title at AFBF convention.

FEDERAL income taxes paid by your 15 state Farm Bureau cooperatives in 1947 alone amounted to $106,518. This does not include taxes paid by County Farm Bureau Co-op units.

In spite of this, your state-wide cooperatives in recent months have been the target of a well-organized campaign to discredit them in the eyes of the public.

The attack generally has followed the line that cooperatives enjoy tax-exempt privileges thereby competing unfairly with privately-owned businesses.

Some enemies of farmer cooperatives would like the public to believe that cooperatives not only are privileged but actually are tax-free and huge, like some alien monster, and therefore un-American.

They forget, or ignore the fact, that in their attacks they are questioning the integrity of the Illinois Farm Bureau member; because the Illinois Agricultural Association associated cooperatives were founded and are owned and operated by you and your Farm Bureau neighbors.

In this day of billion dollar corporations the average small farmer would be lost if he were to set up small co-ops that extended only to his four corners. He knows very well why he needs state-wide cooperatives. There is little likelihood that he will change his course.

Men who are blind will remain blind. It will do no good to tell them that our cooperatives are not tax-free. What is the true record of the state-wide cooperatives associated with the Illinois Agricultural Association?

All Farm Bureau-type cooperatives in Illinois are subject to every state and local tax paid by a privately-owned business or corporation. This includes the personal property tax, real estate tax, the two per cent state sales tax, and various license fees. In Illinois we can dismiss state and local taxes as an issue.

Consider the federal income tax. This is the tax that enemies of cooperatives imply we do not pay. It is not generally realized outside of farm groups that the Illinois Agricultural Association has been a leader in the movement to surrender the income tax-exempt privileges allowed by federal law to many farm cooperatives. This leads one to believe that the enemies of farm cooperatives are more interested in destroying them than in tax reform.

All except two of the IAA associated cooperatives already have surrendered their income tax-exempt privileges and the two remaining will consider the matter of removing their exemptions soon.

A non-exempt tax cooperative pays taxes on all that portion of its income which is used for payment of preferred stock dividends or is put into the surplus account or the reserve fund of the cooperative. All patronage dividends paid out to patrons go into the deductible column when the cooperative files its tax returns.

The IAA service cooperatives which depend on dues from members are exempt as are other dues-paying organizations such as the Illinois Chamber of Commerce or the Progressive Mine Workers.

Cooperatives that are income tax exempt do not pay federal income taxes on profits retained as reserves and not passed back as patronage dividends. It has been claimed that cooperatives have used these savings to expand their operations instead of returning them as refunds.

Since similar savings in the hands of privately-owned businesses are taxed, many business men claim this allows cooperatives an unfair tax advantage.

This is not an important issue to cooperatives affiliated with the Illinois Agricultural Association since most of the companies have or are expected soon to surrender their letters of exemption. It refutes the argument that our cooperatives pay no federal income tax.

There are three possible sources of income tax in cooperatives like the IAA associated companies. The first is on profits from business done with non-members. We pay income tax on profits realized from such business. As an example, the 66 service companies in Illinois in 1943 paid income tax of $120,-146.98 on this account.

The second source is income tax on profits paid as dividends to preferred stockholders or put away into surplus. All companies having these funds have or will pay taxes on these accounts as explained previously.

The third is income tax on profits paid as refunds to members. This is the crux of the fight on taxing farm co-ops. The rest is pretty much smoke-screen.

Over a long period of time the Treasury Department and the Bureau of Internal Revenue have taken the position that patronage refunds made by a true cooperative are the property of the patron.

Patronage refunds are not a profit to the cooperative since the cooperative agrees in advance to pay back to the members any money left after deducting expenses.

When these refunds go back to the farmer they increase the farmer's income which is subject to income tax. The privilege is not restricted to cooperatives.

RURAL YOUTH
Studies IAA in Chicago

TO GET a closer look at the Illinois Agricultural Association, 83 Rural Youthers and youth assistants spent two days in Chicago last month.

In many cases Rural Youth leaders of today will be the Farm Bureau leaders of tomorrow. With that in mind, the IAA sponsored the two-day short course in Chicago to acquaint the young men with some of the more detailed relationships between the IAA and other organizations and within the IAA itself. Seventy-six counties were represented.

The general theme of the short course was "How the IAA Serves Illinois Farmers." Among those addressing the youth leaders was IAA President Charles B. Shuman who spoke on the relationship between the IAA and the University of Illinois.

Several of the speakers expressed their surprise at the wide knowledge the young men already had about Farm Bureau and the Illinois Agricultural Association.

Explaining their departments and the services offered farmers were IAA staff men George E. Metzger, organization and information. He spoke on purchasing activities of the IAA; Dr. C. D. Van Houweling, veterinary medical relations; E. D. Lyon, young people's activities; L. L. Colvis, division of marketing; Sam F. Russell, livestock marketing; G. H. Iftner, grain marketing. Iftner, who founded the first county Rural Youth group in Illinois while Effingham county farm adviser, spoke on the beginnings of Rural Youth; E. V. Stevenson, Illinois Farm Supply Company; W. W. Whitlock, safety and public health. I. E. Parett, secretary of the division of general services, spoke on the important subject to Rural Youthers of "Getting Started in Farming." In connection with Parett's talk a movie was shown entitled "What is a Farm Worth?"

Mixed with the speaking program were three tours made by the Rural Youth leaders. On Monday afternoon after a luncheon at the Stockyards Inn, the young men viewed the slaughtering and storage activities of Swift and Company.

Tuesday morning they visited the Board of Trade, watched the noisy process of trading on the board floor, and were given a lecture on floor operations. They also visited the top floor of the Board of Trade building for a look at the Chicago skyline. This tour was under the direction of Howard McWard and E. J. Kazmarek of the Illinois Grain Corporation, the IAA's grain brokerage affiliate.

Tuesday morning the young men were

Left: A group of Rural Youth gather in the Chicago Board of Trade lecture room to hear operations of the board explained to them.

conducted on a tour of the IAA building and visited President Shuman in his office. Two of them, J. Robert Young of Henry county and George Matthews of Whiteside, were guests on the WLS Dinner Bell Hour.

In his talk President Shuman pointed out that the IAA has a uniform cooperative agreement with each county Farm Bureau. Each county Farm Bureau, he said, has a memorandum of understanding with the Extension Service of the College of Agriculture. There is no contractual agreement between the Extension Service and the IAA. This enables the IAA to operate with freedom from state control and under the direct control of the farmers who are members of Farm Bureau.

History of Farm Bureau

A historical account of the growth of Farm Bureau in Illinois was presented by Secretary Metzger showing particularly the need for and the development of the Illinois Agricultural Association.

Colvis explained the corporate setup of the IAA associated cooperatives and their position in business as compared with other business corporations. He pointed out that farmers believe that the cooperative type of corporation is best suited to their needs.

Stevenson of Farm Supply said that 104 companies and Illinois Farm Supply Company are meeting the needs of farmers in every county of Illinois. Since 1927 this farmer-owned, farmer-controlled cooperative has set standards of quality, has provided improvement in to-the-farm services and has returned to farmer patrons in cash more than $25,000,000. This is the business organization, he pointed out, you Rural Youth are inheriting. But with the benefits, you also are inheriting the responsibilities, he cautioned.

Lyon emphasized the opportunity Rural Youth groups have to use educational material relative to the IAA and its services in informational programs at local Rural Youth meetings. He explained that the IAA deals with the fundamentals of agriculture with which Rural Youthers live and work as farmers.

Dr. Van Houweling explained that the purpose of his department was to help farmers take advantage of the services available to them in fighting animal disease. Van Houweling pointed out that the farmer has many sources of aid available to him when his animals are threatened or stricken with disease.

The importance of safety on the farm was stressed by Whitlock who urged greater use at Rural Youth meetings of safety posters, film, and film strips, safety games and songs.

WHY NOT CONSOLIDATE ?

By JOHN K. COX, Director
IAA Rural School Relations

MANY small high schools in Illinois are wasting money or failing to serve the community or both. Per capita costs in some Illinois high schools last year ran as high as $800 to $1000 per pupil. In many small high schools the per pupil cost is two to six times as high as in grade schools in the same communities. The high school is getting too much and the grade school not enough, or both. School men generally recognize that a 20 per cent differential between the grade school per capita cost and the high school per capita is justifiable but not 200 to 600 per cent.

Many people in downstate Illinois have failed to see the duty of the high school to the pupils and the community. Park Ridge and Des Plaines, both rather wealthy suburbs of Chicago, with 14,000 and 11,000 population respectively, recognized the responsibility of the high school and pooled their resources to build in open country between them one of the finest high schools in Illinois, the Maine Township High School. Glen Ellyn and Lombard, two more fairly large suburbs, cooperated to establish the Glenbard High School, an excellent institution with a broad range of educational opportunities for the youngsters.

Many downstate communities with village centers of 350 to 1500 people and less wealth refuse to cooperate to set up a larger high school. They worry about the larger town outvoting the smaller town, and other trivialities, while neglecting to face up to the question "What should the high school provide in educational experiences and opportunities for our boys and girls?"

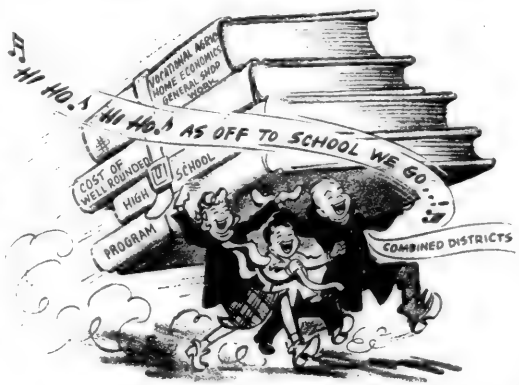
One high school in northern Illinois has 24 pupils, four teachers who have a teaching load of four pupils per teacher, and per capita costs last year of $1000, approximately.

Another high school board insisted on building a high school for 36 pupils. They had five teachers employed. Such situations are a waste of the teachers' time and the taxpayers' money. Worse than that, the limited courses offered there fail to do the job.

Southern Illinois, has, in the main, more pupils per square mile and less money to waste than northern Illinois. Therefore, limited high school programs are perhaps more prevalent there than in northern Illinois. Pulaski county, for example, has five high school districts, seven high schools, two of them being for colored children, and no vocational agriculture, vocational home economics or general shop courses are taught in any of the high schools.

The small high school does a poorer job of discharging its responsibility to the community than the small grade school. The grade school's main job is to train the pupils to enter high school. The high school's main job is to train 20 per cent of the pupils to go to college and 80 per cent of them to live and work in the community.

What does the small high school provide? Mainly it teaches mathematics, science, civics, history, economics, English, and a language, often Latin. These subjects are fine for basic studies but they do little to fit boys and girls into the work of the community. Agriculture, general shop, home economics, business science, and a good activity program are necessary to broaden the experience of



the child that does not go to college. Also a vocational guidance counselor is needed to acquaint rural boys with the good and bad points about a profession or trade and how to prepare to enter their chosen field of labor especially since 50 per cent leave the farm.

The logical answer is consolidation of small high schools into larger administrative units. Here the trouble begins. Opposition to high school consolidation comes from several sources.

Business men often associate the high school with the maintenance of trade. They say, "We can't afford to lose our

John Hunter makes the first delivery in his new feed truck to the farm of Foster McDonald, outstanding Farm Bureau and Service Company cooperator in Jefferson county. Granddaughter Joyce McDonald is on hand to greet the new truck. Note advertisement for the Service Company on the barn.

By CRESTON FOSTER, Editor, IAA RECORD

IF THEY ever award a prize for the state's most "participating" Farm Bureau member, Foster McDonald, Jefferson county chapter member, ought to win it hands down.

McDonald not only uses every service that his Farm Bureau and associated companies have to offer, but he spends his spare time urging his neighbors to do the same. It's not only good business, he says, but it helps to build the organization. Back in 1935 McDonald even had an advertising sign boosting his local service company painted on his barn.

Foster McDonald

And McDonald is the kind of a man that every advertising man dreams about when he is looking for a customer to help sell a product. McDonald really gives a product a real trial and he can tell you why it pays him to use it. He is thoroughly sold on Blue Seal feed products, using 40 per cent hog supplement and 20 per cent laying mash. He cooperates with his truck salesman by ordering early and always keeping his tanks filled. McDonald was one of the first in his county to install an underground tank.

McDonald also carries Country Life insurance on himself, wife and son. His auto and farm truck are insured with the Country Mutual Casualty Company. He says he saved $2 per ton on the rock phosphate he purchased through his Farm Bureau affiliate. He also got a refund on his seed corn, and he purchased his alfalfa and clover seed through his Farm Bureau affiliate.

The butter used on the McDonald dinner table bears the label of Prairie Farms. He wouldn't have any other. Incidentally, McDonald was a charter stockholder in the Carbondale Prairie Farms Creamery.

Active in Farm Bureau organization work, McDonald recalls hauling solicitors about Jefferson county when they were trying to get the Farm Bureau started. He had his way paid to the IAA annual meeting in 1947 as the result of signing the highest number of members in the cleanup drive of the summer campaign in Jefferson.

McDonald was elected to the board of directors of the Egyptian Service Company in 1933 when it was organized and served through the year of 1934. He was elected secretary in 1939 and served in that capacity until the Egyptian Service Company was divided into the four separate county service companies in December, 1944. The four counties served by Egyptian were Jefferson, Marion, Clay and Franklin.

McDonald is one of the most progressive farmers in his county and his farm is a must on soil conservation tours. He is very proud of his modern stock pond and the fact that he was among the first signers for REA in his county. He uses electricity heavily in his farm chores, for chick and pig brooders and for his complete water system on his 100-acre farm.

Front Cover

ABRAHAM LINCOLN slept here. In fact he lived here for a number of years. This is the tenth in our series of cover pictures showing historical and picturesque scenes in Illinois.

It seems appropriate on this 139th anniversary month of the birth of Illinois' most famous citizen that our cover picture presents the Lincoln home at the corner of Eighth and Jackson streets in the state capital at Springfield.

This is the only home Lincoln ever owned. It is rivaled as an Illinois shrine only by the Lincoln Tomb at Oak Ridge cemetery in Springfield and the reconstructed village at New Salem where Lincoln lived from 1831 to 1837. Lincoln bought this home in 1844 and moved in with his wife and infant son, Robert Todd. When purchased it was a story and a half high. In 1856 Lincoln increased it to two full stories.

His son, Robert, presented the home to the state in 1887 as a shrine. The interior is furnished as when the Lincolns lived there. It is open to the public.

Vigorous and healthy incross hybrid chicks shown here feathering quickly, grow rapidly.

Here are those New CHICKS

BRED LIKE HYBRID CORN

By LEW REISNER, Field Editor, IAA RECORD

ARE YOU tempted to try raising some of the new incross hybrid baby chicks that Illinois hatcheries are handling this winter? You may have your first big chance soon. At least 8,000,000 of these new chicks will be sold throughout the corn-belt this spring, according to a spokesman for one company.

New incross hybrid chicks not yet on the market are being developed in breeding pens throughout the country. Poultry breeders, spurred by the success of pioneers in the hybrid corn industry, are working hard to develop new inbred lines.

This research should result in a flood of new incross hybrids released within the next few years. Most of them will be suited to the average farm. A few will provide pitfalls to avoid.

It might be well to know that the word hybrid as used by many farmers does not mean the same in poultry as it does in corn says Ralph S. Yohe, Secretary, Illinois Poultry Improvement.

This issue of what is or is not a hybrid chicken is causing lively debate within the hatchery industry, and the issue is now before the Federal Trade Commission. At present both crossbreds and incrosses are advertised and sold as hybrids.

The word hybrid as it applies to corn is protected by state laws. It refers to corn produced by crossing inbred lines. Hybrid as it applies to poultry is not defined by law. It applies to both incross and crossbred chicks.

A crossbred chick results from cross mating two standard breeds. Incrosses result from crossing two or more inbred lines. The Austra White is an example of a crossbred chicken. The Black Australor male is crossed on a white Leghorn female. This cross is successful and popular.

But the crossbred chicken is not a hybrid as the corn breeder thinks of it. To him a hybrid is produced by crossing inbred lines. He would say that only the incrosses, chickens bred by crossing inbred lines, are true hybrids.

Bred Like Corn

One of the first and most widely known incross hybrids, developed by Henry B. Wallace, son of the former Secretary of Agriculture, has made a good record under conditions ordinarily found on Illinois farms.

These chickens have been produced by crossing four unrelated, highly inbred lines. Their breeding, like other incrosses, can be compared to hybrid corn. Their parent strains are highly inbred, the result of mating full brothers and sisters for three or more successive generations.

Owners of Wallace-bred chickens seem well pleased with them. They appear to be hardy, docile, and heavy layers. They respond well to the ordinary care given a working farm flock.

For the past three years they have won the egg laying contest conducted by the Illinois Department of Agriculture with an average last year of 227.7 eggs per bird.

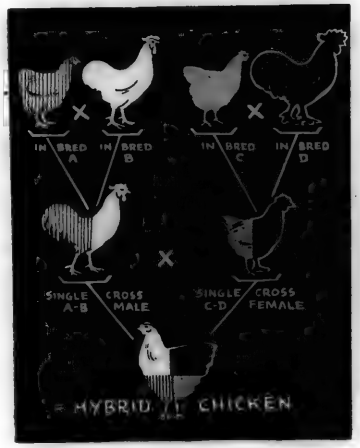
Farm flock owners claim these results which are similar to those recorded at the egg laying contest: Harrison Tuttle, Watseka, 228 eggs per bird; Arnold Kuester, Onarga, 217; Clarence Piper, Buckingham, 232. These are hen housed averages for a 12-month period and include pullets removed by death, culling, and all other causes.

Farmers who have had experience with them say the baby chicks are vigorous, grow rapidly, and feather quickly. The pullets, they say, lay their first eggs early in the fall.

Roy Floit, a DeKalb county dairyman, has been keeping these incrosses for four years. He said his pullets start laying when they are from 5 to 5½ months old, increase to 50 per cent production rapidly, and keep a high rate for a full year.

Last fall he was getting 176 eggs a day from 312 pullets bought from the hatchery about seven months previously.

These incross hybrid laying pullets have a highly inbred ancestry. Parents are result of at least three generations of full brother and sister mating.



Breeding chart shows how four inbred lines are crossed to produce the incross hybrid chicken.

Another flock owner, Mrs. James Daley, DeKalb, a neighbor of the Floits, picked a day's production at random — the 29th day of each month — and followed it through for a 12-month period.

Chicks Cost More

She bought her chicks from the hatchery Mar. 3, 1946. She housed a flock of 476 pullets that fall. Here are her production figures for that day of the month picked at random: Oct. 29, 392; Nov. 29, 353; Mar. 29, 347; July 29, 238; Sept. 29, 187 (moulting period).

Mrs. Daley substantiated the claim that the birds have a high resistance to colds and flu. They do well under adverse conditions, she said, and recover quickly from attacks of disease.

Prices for sexed pullet chicks are almost twice that for the standard breeds. After a look at egg production evidence it seems safe to say that they will produce enough additional eggs to pay for the extra cost.

17 YEARS ON JOB

E. I. Pilchard, state leader of boys 4-H club work, has completed 17 years as superintendent of the junior livestock feeding contest, a national event held each year as part of the International Livestock Exposition in Chicago. Pilchard was graduated from the University of Illinois in 1917.

YOUTH LEADER RESIGNS

Lawrence Herbig has resigned as youth assistant for Stephenson county to work in Carroll, Jo Daviess, and Stephenson counties as agricultural engineer for an electric utilities company.

FARM TAXES

Now Highest in Illinois History

By BERT VANDERVLIET, Director IAA Dept. of Taxation

ILLINOIS farm real estate taxes rose an average of 30 cents per acre from 1945 to 1946 — from $1.06 to $1.36 per acre.

This 28 per cent increase to an all-time high in Illinois farm real estate taxes is far above the 12 per cent average increase for the nation as a whole and the 8 per cent average increase for other states in the Midwestern region.

This tax increase, according to figures released by the U.S. Bureau of Agricultural Economics, was higher than it was in the strong agricultural states of Iowa, Ohio, Michigan, Minnesota, Nebraska, Missouri, North Dakota, South Dakota, Indiana, and Kansas.

The Illinois increase in farm real estate taxes to an all-time high was exceeded only by Massachusetts and California.

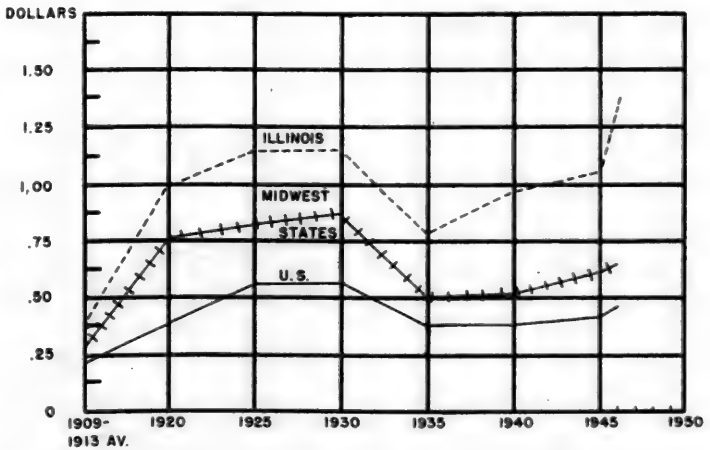
Nation-wide the average increase in the value of farm real estate runs close to the average tax increase, that is approximately 12 per cent. Generally speaking this upward trend in farm real estate taxes is regarded as reasonable. On the other hand, farmers in Illinois are apt to consider a 28 per cent increase in their taxes in one year as anything but reasonable.

The flagrant increase in Illinois may be largely attributed to rural school officials, highway commissioners, and members of county boards who chose to file higher tax levies during 1945. Also, passage of the Butler or 100 per cent tax assessment laws in the 1945 regular session of the Illinois General Assembly, made higher taxes possible from 1945 to 1946 in many rural areas by as much as 60 per cent. In addition, Illinois farmers voted in numerous elections held for the purpose of increasing school tax rates and for the construction of new school buildings. In some counties additional tax levies were voted for increased road and bridge taxes.

The restoration of numerous services rendered by local governments which were cut down during the war also is largely responsible for the increase in property taxes in rural as well as in urban areas. The increased cost of materials and higher wage and salary scales for public employes represents important factors. The chart indicates clearly that a parallel movement occurred in farm real estate taxes following World War I.

(*Continued on page 26*)

REAL ESTATE TAXES PER ACRE IN ILLINOIS, MIDWEST, U. S.



Graph shows how Illinois farm real estate taxes have risen sharply in the past few years. Figures at left show average tax per acre. Midwest states are other than Illinois.

Clip Cows for

By LEW REISNER

Field Editor, IAA RECORD

CLIPPING cows helps to keep milk clean by holding down the bacteria count. Because clean milk heightens quality Illinois dairy co-op are seeking to promote this practice among their farm members.

To learn the latest in clipping technique quality fieldmen from Illinois dairy cooperatives throughout the state attended a special clipping school held recently on the W. A. Rogers farm near Hinsdale in DuPage county.

Clipping has been made far easier with modern electric clippers that do not gouge the cow's hide, the fieldmen learned. Sweating only a little, they trimmed their first cows in less than 15 minutes. An old hand can cut this time in half.

You start on the cow's tail first, the men were told, and then trim the area around the tail bone. The hind quarters come next, starting on the leg just above the hock. The udder is clipped by holding the skin taut and guiding the clipper head carefully.

A strip up the backbone, favorite breeding spot for lice, can also be clipped but this is optional.

Ed Warner, expert cow clipper, sheep shearer, and demonstrator for an equipment company, said any farmer can get the hang of cow clipping. The secret, he said, is to clip in a direction opposite to the way the hair lies on the animal. The skin in front of the clipper head always should be drawn tight.

Clipping makes it easier to keep cows clean and is recommended by colleges of agriculture throughout the Midwest. It is well known that long hair on the flanks, udder and underline provides a clinging place for dirt and filth.

It also improves the looks of an animal, and this, of course, makes them sell better in the sale ring.

Tests made at the University of Wisconsin indicate that the number of bacteria in milk can be reduced by as much as 34 per cent by clipping.

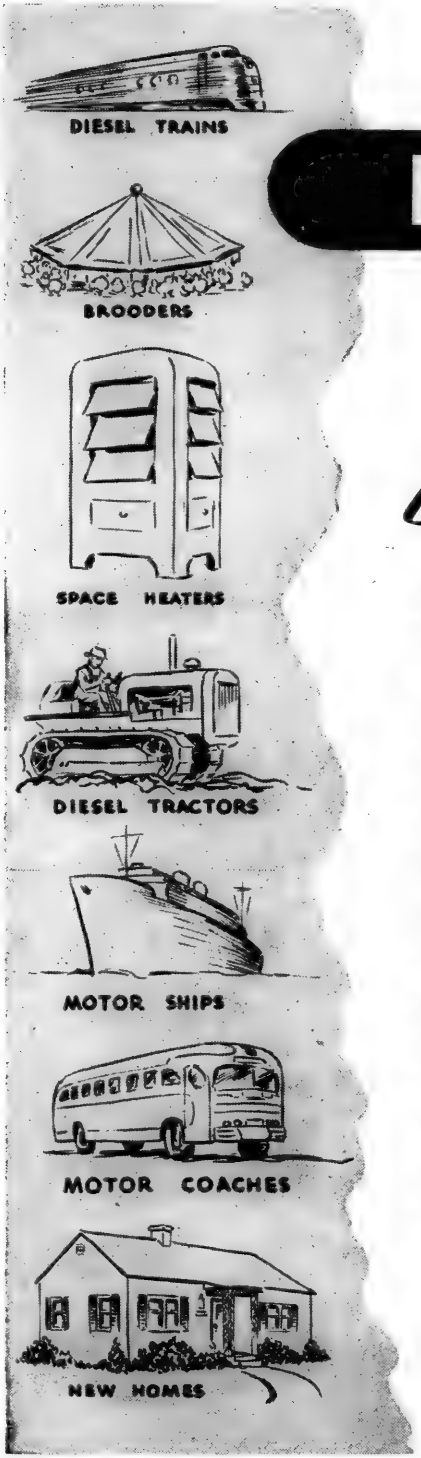
Of even more importance to the average milk producer is the time saved. Since cows keep cleaner after being clipped, particularly during winter months, farmers find they save a few minutes each milking when the udders they clean have been trimmed.

Clipping will not make a millionaire out of every dairymen, even the most ardent supporters of the practice would admit. It does cut the corners a bit and increases the profit margin in dairying, an industry where profit margins are generally narrow.

The clipping demonstration was part of a two day school for the quality fieldmen. The first day they spent learning how to maintain and repair electric milk coolers which are handled by Illinois Milk Producers Supply Company for milk producers.

The electric clipper require little care except periodic oiling. The two removable blades are hollow ground and require special grinding to sharpen.

A special head is manufactured to fit the clipper and can be used to shear sheep.



FUEL OIL?

Listen, Bill—

Bill, I can not fill your furnace oil tank today. But I will put in enough to run you a week or so. I know this situation worries you. That's why I want to talk to you. There just isn't enough burner fuel to give everyone all he wants whenever he wants it. This shortage affects everyone in the industry—not just us alone.

Oil production is now greater than ever before, even greater than during the peak war years. But consumption has increased much more rapidly than production. All this boils down to the cold fact, that today there just isn't enough petroleum products to meet the demand.

However, the situation is not so dark but that we can see an open road ahead. We can get by if every user saves every gallon possible. I'm asking each of my customers to heat only that portion of the house absolutely necessary. Close off all the rest. Keep the daytime temperature of the heated part between 68 to 70° F. Then at night drop the temperature to 60° F. or less. This type of operation may not give the greatest comfort, but it will save between 10 to 15% of the gallonage needed and will give a like saving in your fuel bill.

We've licked bigger problems than this and by working together, we'll lick this one!

Clip Cows for

Higher Profits

To start Jud Mason, clips tail. Watching are Fieldmen Seay, Carlinville, Risse, Bloomington.

Hind quarters come next. Lee Shafer, Prairie Farms fieldman, Olney, shows where to start above hocks.

By LEW REISNER

Field Editor, IAA RECORD

CLIPPING cows helps to keep milk clean by holding down the bacteria count. Because clean milk heightens quality Illinois dairy co-ops are seeking to promote this practice among their farm members.

To learn the latest in clipping technique quality fieldmen from Illinois dairy cooperatives throughout the state attended a special clipping school held recently on the W. A. Rogers farm near Hinsdale in DuPage county.

Clipping has been made far easier with modern electric clippers that do not gouge the cow's hide, the fieldmen learned. Sweating only a little, they trimmed their first cows in less than 15 minutes. An old hand can cut this time in half.

You start on the cow's tail first, the men were told, and then trim the area around the tail bone. The hind quarters come next, starting on the leg just above the hock. The udder is clipped by holding the skin taut and guiding the clipper head carefully.

A strip up the backbone, favorite breeding spot for lice, can also be clipped but this is optional.

Ed Warner, expert cow clipper, sheep shearer, and demonstrator for an equipment company, said any farmer can get the hang of cow clipping. The secret, he said, is to clip in a direction opposite to the way the hair lies on the animal. The skin in front of the clipper head always should be drawn tight.

Clipping makes it easier to keep cows clean and is recommended by colleges of agriculture throughout the Midwest. It is well known that long hair on the flanks, udder and underline provides a clinging place for dirt and filth.

It also improves the looks of an animal, and this, of course, makes them sell better in the sale ring.

Tests made at the University of Wisconsin indicate that the number of bacteria in milk can be reduced by as much as 34 per cent by clipping.

Of even more importance to the average milk producer is the time saved. Since cows keep cleaner after being clipped, particularly during winter months, farmers find they save a few minutes each milking when the udders they clean have been trimmed.

Clipping will not make a millionaire out of every dairymen, even the most ardent supporters of the practice would admit. It does cut the corners a bit and increases the profit margin in dairying, an industry where profit margins are generally narrow.

The clipping demonstration was part of a two day school for the quality fieldmen. The first day they spent learning how to maintain and repair electric milk coolers which are handled by Illinois Milk Producers Supply Company for milk producers.

The electric clipper require little care except periodic oiling. The two removable blades are hollow ground and require special grinding to sharpen.

A special head is manufactured to fit the clipper and can be used to shear sheep.

Above: Olney fieldman Taylor trims flank. Below: Fieldman Frederick clips teat udder.

Ed Warner, Chicago, clipper fieldman, trims strip up backbone to help control lice. This is optional.

Finishing touches are put on cow by Fieldman Taylor. Clipping saves time in cleaning cows.

Headline illustration shows IAA Director K. T. Smith getting ready to weigh in some of his Hereford calves. They averaged about 600 pounds.

★ ★ ★

By JIM THOMSON
Ass't Editor, IAA RECORD

WHEN the IAA director from the 20th congressional district was born, his aunt who lived with the family was disappointed. Her heart had been set on a baby girl. She even had a name ready — Katherine. But the name didn't fit. All he got was the initial. So if you have wondered about K. T.'s first name, that's the story. He hasn't any. The letter "T" is for Taliaferro, a family name. Down in Greene county he is widely known as "Trot" but that's another story.

In recent years, K. T. Smith has done much for Farm Bureau as a member of the legislative committee and chairman of the public relations committee of the IAA. So perhaps it wasn't such a bad thing after all that his aunt was disappointed.

As director of the 20th district, Smith has represented Mason, Cass, Menard, Brown, Pike, Morgan, Scott, Calhoun, Jersey, and Greene counties since 1934. He is the second oldest director, in point of service, on the IAA board.

During the past several years, he has spent a great deal of time in Springfield with other members of the IAA legislative committee attending legislative sessions and committee hearings, besides continually explaining to individual lawmakers the Farm Bureau point of view on legislation affecting farm people.

Director Smith was born and reared on a farm near Greenfield in Greene county 2 miles north of the farm he now operates. He attended local schools and entered the University of Illinois in 1908 to study civil engineering. In his third year at the University ill health caused him to quit and he went to western Texas to supervise a farm owned by his father. It was a livestock and cotton ranch in the range country.

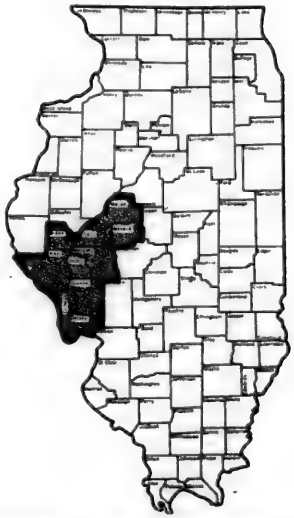
The following winter, 1911-12, he took a business course in Amarillo, Tex., and returned to the home farm in 1912. He was married to the former Mary Metcalf of Greenfield in 1914.

Father Smith owned a rural telephone system so K. T. had the job of supervising a telephone construction and repair crew for a number of years. Besides working on the phone lines, he helped grade his township roads.

From his experience and training, he is pretty well grounded in the fundamentals of engineering. He often uses his engineering instruments and neighbors like to have him around on such occasions as when they are installing drainage tile. In 1940 he supervised a drainage census in 76 Illinois counties.

Engaged in general farming most of his life, Smith has specialized somewhat in stock feeding. As a young man he rented as much as 360 acres but today he owns 160 which he operates with the help of a hired man. The hired man lives on the farm. The Smiths moved to the outskirts of Greenfield several years ago.

Throughout his farming career, K. T. has been closely connected with Farm Bureau. He helped organize the Greene county unit, became a charter member, and played a leading part in membership drives. During more than a quarter of a century he has served on the county board of directors, he has traveled the 20 miles to meetings at Carrollton on horseback, by buggy, train, and automobile. At present he is treasurer of the Greene County Farm Bureau.



Shaded area on map shows the 20th Congressional district which is represented on the IAA board of directors by K. T. Smith of Greenfield.

Director Smith is shown with his collection of Indian arrowheads which he has gathered for a number of years. Here he shows Mrs. Smith how the redmen fashioned a stone ax.

★ ★ ★

This is the 12th of a series of articles to further acquaint you with the men who represent you on the Illinois Agricultural Association board of directors.

K. T. is always on the lookout for better ways of raising hogs. He was especially proud of the pigs shown above.

Director Smith feeds an average of two loads of cattle each year and raises and finishes from 200 to 500 head of Chester Whites. He carries 30-50 sheep for cleanup.

He is gradually shifting to a strong permanent pasture program so that about two-thirds of his farm is now in pasture. The land is gently rolling and is included in the program of the local soil conservation district. Smith is a member of the state soil conservation board.

All of his land has been limed and most phosphated. At present he is experimenting with the addition of minor minerals to his soil. His four-year rotation plan is corn, corn, oats and clover.

One of K. T.'s proudest achievements is his work as chairman of the IAA State School Survey Committee. The report of the committee was adopted in 1944 by the IAA delegate body and is now the basis of IAA rural school reorganization policy.

Mr. and Mrs. Smith have two children, a son, Robert, 32, an electrical engineer who lives in Chicago with his wife and two sons, and a daughter, Mrs. J. M. Scranton, 31, wife of the manager of the Mason County Service Company. The Scrantons have a son and live in Havana.

He's not a dairyman but Director Smith feels that he has a Jersey here that will stand up with the best of them.

K. T. says: "One of the IAA's chief concerns is to see that agricultural interests are fairly represented in the legislative halls and that the mandate of the delegate body is clearly stated at public and legislative committee hearings.

This attitude is ever present in his thinking as he sticks close to Springfield while the legislature is in session. His close relations with legislative activities has put him on many state committees, including schools, library, war food, G. I. training, and state commissions for the advancement of the interest of people connected with agriculture.

Director Smith has served as a school director for a number of years and is secretary-treasurer of his local cooperative elevator.

Few, if any, Illinois farmers are more aware of the beneficial effects to farming brought about by a strong organization than K. T. Smith. Says he: "The majority of thinking farmers know they cannot do without a strong organization to defend their interests. We must have such an organization if we are to assure ourselves of an opportunity to make a good living on the farm."

CORN BORER THREAT GREATEST YET FACED

Dr. George C. Decker, entomologist, University of Illinois and State Natural History Survey, reports that the borer population going into hibernation last fall was the highest on record. With few exceptions the counties surveyed showed moderate to large increases in the number of borers per plant.

The borer threat is greatest in northwestern Illinois, where 15 counties have populations averaging nearly three borers per plant.

In view of the rather dark outlook for 1948, Decker says it is logical and sound for farmers in the northern half of the state — particularly those in the 12 to 15 northwestern counties — to be prepared to spray or dust all early-planted or exceptionally fast-growing and well-advanced corn.

IAA Offers New Insurance Service To Member Co-ops

TO OFFER counsel and insurance brokerage service to some 390 cooperatives associated with county Farm Bureaus and the Illinois Agricultural Association, a new insurance service has been inaugurated by the IAA.

This service, a branch of the IAA Insurance Service, is known as the Illinois Agricultural Association Insurance Service for Farm Bureau Cooperatives.

A. R. Grauer

John Chesnutt

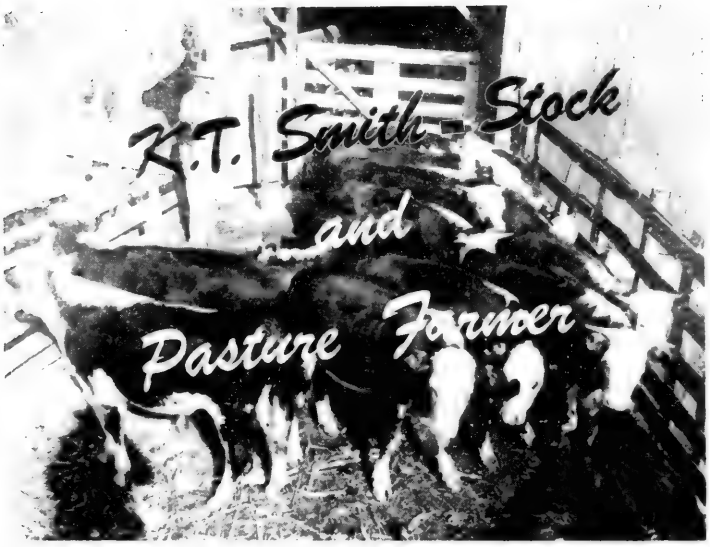
For some time the IAA has felt and recognized the need of an expanded insurance service program for the cooperatives. Since 1934 the IAA has maintained an insurance brokerage service whose principal function has been to secure and service various types of bonds and insurance coverages that were not offered by the IAA's own three insurance companies.

Since 1936 the active direction of the brokerage service has been under A. R. Grauer who has handled its operations in conjunction with his duties with the Country Mutual Casualty Company. Grauer has now taken over active direction of the new department. He thus ends 13 years service with the Country Mutual Casualty Company. John Chesnutt of Sycamore, formerly with the Illinois Education Association, has been hired to assist Grauer in the field. It is hoped that additional personnel will be available to locate in strategic parts of the state for the purpose of personally contacting each and every Farm Bureau cooperative at regular intervals.

TWO ADVISERS RESIGN

Ben F. Wallace has resigned as farm adviser of Johnson county and will enter business in Champaign.

Edgar Booker, Clay county farm adviser, resigned recently to work for the Soil Conservation Service. He has been in Clay county as adviser since 1941.



Headline illustration shows IAA Director K. T. Smith getting ready to weigh in some of his Hereford calves. They averaged about 600 pounds.

Edgar Booker, Clay county farm adviser, resigned recently to enter the Soil Conservation Service. He has been in Clay county as adviser since 1941.

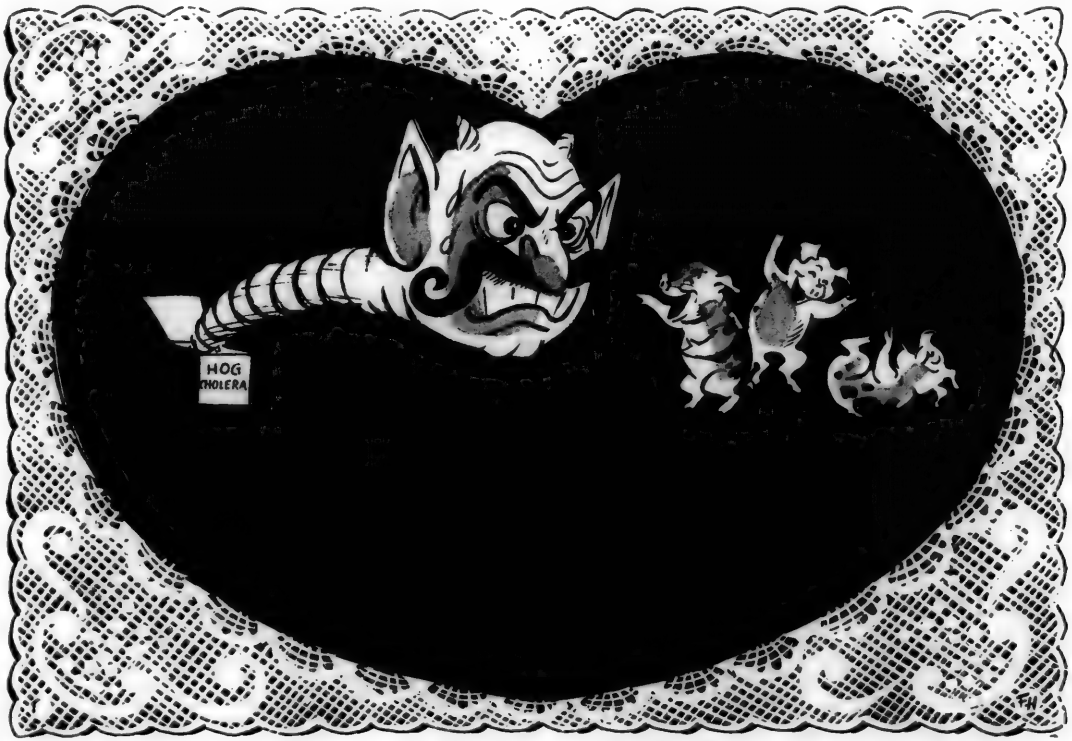
NOTICE OF ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of February, 1948, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the association.

During February, annual meetings will be held in Coles, DeKalb, Douglas, Edgar, Effingham, Grundy, Lake, McDonough, Monroe, Wayne, Whiteside and Will Counties.

Paul E. Mathias, Secretary

Nearly $95,000 was contributed by Illinois dairy farmers during the 1947 drive to collect funds for the work of the American Dairy Association. Pledges, on a voluntary basis, are collected by handlers, processers and milk dealers throughout the state. Shown above is Wilbur J. Swayer, president of Dairy Products Promotion, Inc., handing check to Owen Richards, general manager of the American Dairy Association, while Carl F. Deysenroth, treasurer of DPP Inc., looks over his shoulder. Others in attendance at the board of directors meeting held to plan for 1948 activities are as follows: (seated left to right) O. H. Ryan, La Salle-Peru Producers; Dave Henry, manager, Prairie Farms Creameries; Harry Gehring, president, Prairie Farms Creameries; M. G. Van Buskirk, Illinois Dairy Products Association; George Southwell, Equity Union; A. T. Hebart, Oatman Bros.; (standing) H. Stanley Wanzer, Sidney Wanzer and Sons; Oscar Swank, manager, district office ADA; Edwin Gumm, Illinois Milk Producers Association; E. E. Houghtby, Illinois Milk Producers Association; Wilbur Swayer, president, Pure Milk Association; Owen Richards, general manager ADA; Carl F. Deysenroth, treasurer DPP Inc.; Arthur Hartman, Hampshire Milk Co., and Vinton Thompson, Alton Ice Cream Co.



ILLINOIS FARM BUREAU SERUM ASSOCIATION

Trouble Ahead?

WITH the heavy spring work just around the corner, and with dangerous farm equipment repair work starting right now, it is time to remind ourselves of three things: 1) That farming is a highly dangerous business, with over 2000 accidents reported to this company last year. 2) That if your hired man is among those injured on the job this year, you risk having a heavy judgment imposed on you by law. 3) Such a judgement could easily lose for you all the profits you will make this year, and much more.

Many farmers do not realize how extensive their liability is. If you are one, and are not fully covered, have a talk with your Country Mutual Casualty representative today at your Farm Bureau office. Let him show you how little it costs to be safe. Let him show you how much it could cost to be "sorry".

COUNTRY MUTUAL CASUALTY COMPANY

COUNTRY MUTUAL CASUALTY COMPANY provides protection for you as a farm operator and employer, full protection for your auto or truck — collision, liability, property damage, fire, theft, medical expense reimbursement, 4-H Club calf, coverage against loss of cargo.

NOTICE OF ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of February 1948 at the hour and place to be designated by the Board of Directors of each County Farm Bureau the members in good standing of such County Farm Bureau and who are not disqualified voting members of Illinois Agricultural Association shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting or any special meeting of the Association including the election of officers and directors as provided for in the By-Laws of the association.

During February annual meetings will be held in Coles DeKalb Douglas Edgar Effingham Grundy Lake McDonough Monroe Wayne Whiteside and Will Counties.

Paul E. Mannan, Secretary

Nearly $95,000 was contributed by Illinois dairy farmers during the 1947 drive to collect funds for the work of the American Dairy Association. Pledges, on a voluntary basis, are collected by handlers, processors and milk dealers throughout the state. Shown above is Wilbur J. Swayer, president of Dairy Products Promotion, Inc., handing check to Owen Richards, general manager of the American Dairy Association, while Carl F. GOOFY FARM ACCIDENTS IN '47

WITH hundreds of Illinois farmers being injured in farm accidents each year it's not surprising that several so-called daffy mishaps would turn up in the news clippings gathered by the Illinois Agricultural Association safety and health department.

Looking over these 1947 accidents we find that "bottled corn" is not the only dangerous type — an ear of corn thrown by a corn cutter fractured a farmer's jaw. In another case a soybean pierced a combine operator's eye.

Livestock accidents, though gradually decreasing, accounted for several of the daffy variety. One dairyman reversed the usual procedure by kicking the cow he was milking and wound up with a fractured toe.

A hog producer suffered a fractured leg when a heavyweight porker ran into him. Another hog producer thought counting hogs a safe pastime until the post he was sitting on gave way and dumped him on the ground, causing severe injuries to both hands.

One Illinois farm wife doesn't believe the old saying that lightning never strikes twice. Last year she was struck near the same window in her home where she was hit 10 years before.

Speaking of lightning, one old sow demonstrated good "hog sense" when she sought safer quarters for her record litter of 13 pigs by leaving an isolated, much-struck hollow tree where she'd sought temporary housing to give birth to her piggies.

Other accidents include a farmer who tried to rescue a puppy from a well and fell in himself; a man who broke his ankle while chasing a dog away from his sheep; and a boy who punctured his lung on a broken piece of concrete sidewalk.

By W. W. WHITLOCK, Director
IAA Dept. Safety and Public Health

These are just a few of the unusual farm accidents, and true, the law of averages may save you from mishap — provided the "usual" kind doesn't get you first.

Among these more usual accidents, machinery casualties are mounting each year. For instance, it's not unusual at all for 200 or 300 Illinois farmers to be hurt on tractors each year. More often than not it is caused by the operator falling off or overturning the tractor. Reduced speed around corners and avoidance of ditches could easily reduce these accidents to the minimum now enjoyed by cranking casualties which was the leader for several years.

Other machinery accidents in 1947 show combines causing a similar share of accidents as previously. Making adjustments or oiling while machinery is in motion takes a yearly toll of around 50 farmers.

But the mechanical corn picker continues to lead in seasonal machinery casualties. It seems that a couple hundred injured farmers, half of them either killed or permanently disfigured, would be incentive enough for others to use adequate power take-off shields or to simply shut off the power while unclogging the machine.

Lightning accounted for more deaths and injuries last year than for any year in the past decade.

With hunting accidents in 1947 fourfold the 1946 figure, you are again reminded to be wary of the "unloaded gun" and to point a gun only where you intend to shoot.

Shuman Names Three to Rural Doctor Fund Committee

PRESIDENT Charles B. Shuman has announced that Floyd E. Morris, vice-president, Sangamon county, K. T. Smith, Greene, and Lyman Bunting, Edwards, board members, have been appointed to the Medical Education Fund Committee of the Illinois Agricultural Association.

This new committee will help to administer the student loan fund now being established by the Illinois Agricultural Association jointly with the Illinois Medical Society to help needy students through medical school.

This fund will advance $1,000 annually over a period of five years to students admitted to recognized medical schools. They must agree to return and practice general medicine in a town of less than 5,000 population until their loans have been repaid.

Recently elected Kane County Rural Youth officers are, left to right: Mariam Carlson, treasurer; Don McClay, president; Wally Brown, vice pres.; Shirley Theis, secretary; and Dorothy Vanthoumont, editor.

WHY NOT CONSOLIDATE SMALL HIGH SCHOOLS?

(*Continued from page* 10)

high school; we'll lose our trade." The answer is that they will not lose their high school but will have perhaps a few miles away a stronger high school, better equipped and adapted to serve the community.

Farm people have no great stake in the small high school that fails to provide a good agricultural or home economics course, but village people are often less well informed and practical.

Many patrons, including many village people, become ardent basketball fans to the extent that sport to them seems to be the most important function of the high school. They cannot imagine becoming a part of a larger school district including the town several miles down the road which they have always considered an enemy in basketball. The greater efficiency of the larger district means little to them. And the scaling down of per capita costs means little because many of those people pay very little property tax.

Another group has a vested interest in the small high school. This is the school employee who thinks first of personal welfare and second of the boys and girls. Many of these teachers and principals are interested enough in the benefit to the pupils and to the community of the larger school district to be willing to make what sacrifices, if any, are necessary. These teachers and principals have little to fear because they know they have recognized ability in their profession and will be able to render service that will be in demand by a larger school district.

The many advantages under the Community Unit Act passed in the last legislature merit careful consideration by those who would improve our school system. This act makes possible a thorough reorganization job by combining the grade school with the high school under one school board, one supervisor, and one tax rate.

Significantly, Ohio that has done considerable reorganization of school districts in the larger community basis rates above Illinois on most educational yardsticks, particularly in school organization, yet per capita costs there are 25 per cent lower than per capita costs in Illinois. To get our money's worth of education small high schools as well as small grade schools must pool their resources in a larger, more effective administrative and taxing unit.

MISSOURIANS VISIT

To get a look at the Farm Bureau setup in Illinois which they had heard so much about, 13 farmers from Johnson county, Missouri visited the Farm Bureau offices in Logan, Sangamon, and McLean counties in December.

McDONOUGH ASSISTANT

Earle A. Smith, 38, is the new assistant farm adviser and organization director for McDonough county. Smith comes to Macomb from Lincoln where he has been a special insurance agent.

New AFBF Head is Long-Time Hog Farmer

ALLAN B. KLINE, the new president of the American Farm Bureau Federation, is a 52-year-old hog farmer from near Vinton, Iowa.

He has been president of the Iowa Farm Bureau Federation for the past several years and vice president of the American Farm Bureau Federation for two years. Kline helped set up the new International Federation of Agricultural Producers at London in 1946. He represented the AFBF at the IFAP conference at The Hague, Netherlands.

Owner and operator with his son of a 440-acre farm on which his three children were reared, Kline has had considerable experience in both state and national Farm Bureau leadership during the past several years.

Romeo Short, Brinkley, Ark., the AFBF's new vice president, is president of the Arkansas Farm Bureau. He was born in Illinois, reared in Iowa, and has been an Arkansas farmer since 1920. Short has been a member of the AFBF board of directors since 1937. He is a rice, cotton, and livestock farmer.

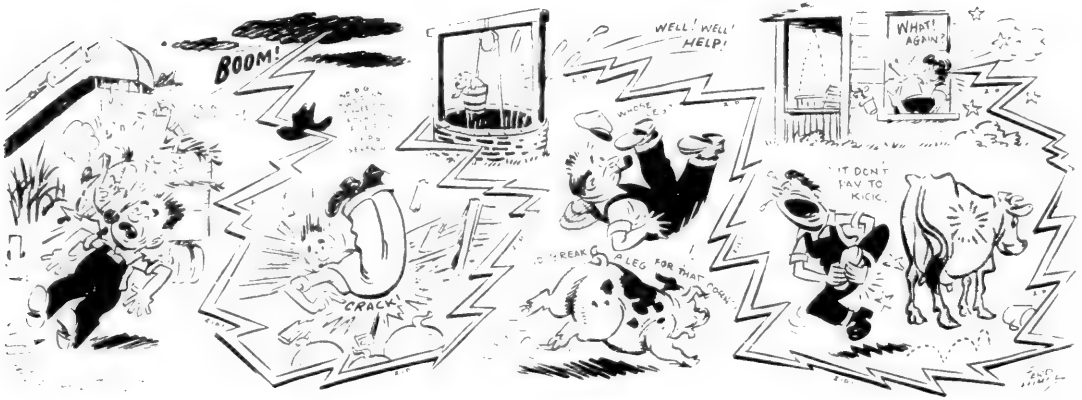
Short is an able speaker and is recognized as an authority on farm credit. He is a director of Farm Credit Administration's St. Louis district. The Shorts have one son, a student at Oklahoma A & M College.

ONE THOUSAND MEMBERS

Saline County Farm Bureau was 30 years old Oct. 27, 1947, has grown from about 60 charter members to more than 1000.

IAA Director Albert Webb (standing) chats with a group during the AFBF livestock marketing conference at the Stevens Hotel in Chicago. Left to right, seated: Carl O. Johnson, DeKalb county; Charles Hearst, Cedar Falls, Ia.; and R. K. Bliss, Extension Service, Iowa State College.

GOOFY FARM ACCIDENTS IN '47



By W. W. WHITLOCK, Director
IAA Dept. Safety and Public Health

WITH hundreds of Illinois farmers being injured in farm accidents each year it's not surprising that several so-called daffy mishaps would turn up in the news clippings gathered by the Illinois Agricultural Association safety and health department.

Looking over these 1947 accidents we find that "bottled corn" is not the only dangerous type - an ear of corn thrown by a corn cutter fractured a farmer's jaw. In another case a soybean pierced a combine operator's eye.

Livestock accidents, though gradually decreasing, accounted for several of the daffy variety. One dairyman reversed the usual procedure by kicking the cow he was milking and wound up with a fractured toe.

A hog producer suffered a fractured leg when a heavyweight porker ran into him. Another hog producer thought counting hogs a safe pastime until the post he was sitting on gave way and dumped him on the ground, causing severe injuries to both hands.

One Illinois farm wife doesn't believe the old saying that lightning never strikes twice. Last year she was struck near the same window in her home where she was hit 10 years before.

Speaking of lightning, one old sow demonstrated good hog sense when she sought safer quarters for her record litter of 13 pigs by leaving an isolated, much struck hollow tree where she'd sought temporary housing to give birth to her piggies.

Other accidents include a farmer who tried to rescue a puppy from a well and fell in himself; a man who broke his ankle while chasing a dog away from his sheep; and a boy who punctured his lung on a broken piece of concrete sidewalk.

These are just a few of the unusual farm accidents, and true, the law of averages may save you from mishap - - provided the "usual" kind doesn't get you first.

Among these more usual accidents, machinery casualties are mounting each year. For instance, it's not unusual at all for 200 or 300 Illinois farmers to be hurt on tractors each year. More often than not it is caused by the operator falling off or overturning the tractor. Reduced speed around corners and avoidance of ditches could easily reduce these accidents to the minimum now enjoyed by cranking casualties which was the leader for several years.

Other machinery accidents in 1947 show combines causing a similar share of accidents as previously. Making adjustments or oiling while machinery is in motion takes a yearly toll of around 80 farmers.

But the mechanical corn picker continues to lead in seasonal machinery casualties. It seems that a couple hundred injured farmers, half of them either killed or permanently disfigured, would be incentive enough for others to use adequate power take-off shields or to simply shut off the power while unclogging the machine.

Lightning accounted for more deaths and injuries last year than for any year in the past decade.

With hunting accidents in 1947 fourfold the 1946 figure, you are again reminded to be wary of the "unloaded gun" and to point a gun only where you intend to shoot.

Shuman Names Three to Rural Doctor Fund Committee

PRESIDENT Charles B. Shuman has announced that Floyd E. Morris, vice-president, Sangamon county, K. T. Smith, Greene, and Lyman Bunting, Edwards, board members, have been appointed to the Medical Education Fund Committee of the Illinois Agricultural Association.

This new committee will help to administer the student loan fund now being established by the Illinois Agricultural Association jointly with the Illinois Medical Society to help needy students through medical school.

This fund will advance $1,000 annually over a period of five years to students admitted to recognized medical schools. They must agree to return and practice general medicine in a town of less than 5,000 population until their loans have been repaid.

Recently elected Kane County Rural Youth officers are, left to right: Mariam Carlson, treasurer; Don McClay, president; Wally Brown, vice pres.; Shirley Theis, secretary; and Dorothy Vanthoumont, editor.

WHY NOT CONSOLIDATE SMALL HIGH SCHOOLS?

(*Continued from page 10*)

high school; we'll lose our trade." The answer is that they will not lose their high school but will have perhaps a few miles away a stronger high school, better equipped and adapted to serve the community.

Farm people have no great stake in the small high school that fails to provide a good agricultural or home economics course, but village people are often less well informed and practical.

Many patrons, including many village people, become ardent basketball fans to the extent that sport to them seems to be the most important function of the high school. They cannot imagine becoming a part of a larger school district including the town several miles down the road which they have always considered an enemy in basketball. The greater efficiency of the larger district means little to them. And the scaling down of per capita costs means little because many of those people pay very little property tax.

Another group has a vested interest in the small high school. This is the school employee who thinks first of personal welfare and second of the boys and girls. Many of these teachers and principals are interested enough in the benefit to the pupils and to the community of the larger school district to be willing to make what sacrifices, if any, are necessary. LETTERS TO THE EDITOR

ROADS and DRAINAGE

I HAVE read your article on allotments for roads in the December RECORD. I wonder if it would be possible to get some aid in draining or having Edgar county lay a 12 or 14-inch tile in the roadside to drain some lowlands adjoining that have no other outlet.

The road is gravel and in fair condition except that the water in wet weather, like last spring, flows over the gravel. I own 80 acres on the east side of this road which had three ponds last spring that ruined my chance of raising a crop. I am willing to pay some cash for the privilege to tap a drain if it were there — and I am sure there are other farmers on both sides that would help. Let me know how to proceed to get some help on the project.

Chas. Asher
Edgar County

CHANGE ROAD SYSTEM

I HAVE read the interesting report on the farm-to-market roads appropriations that the IAA has been instrumental in securing for the long suffering farmer.

I believe that this extra help from state funds is just and desirable but I have seen several instances of poor use of these funds due to mismanagement and to the fact that we do not have road engineers in the person of our township commissioners. I believe that it is true of the use of state funds within this county that the resurfacing has been thrown away for the most part on poor and expensive grades. Many of such roads built last year are impassable in wet weather now.

May I suggest that we need a better quality of organization within the county and, possibly, the state, to bring about a wiser use of funds available?

Specifically, I should like to see a state law passed enabling us to set up a county-wide supervision of all roads within the county under one high class graduate engineer who should be either elected by the people every two years or hired by the county board of supervisors on a year to year basis to insure his alertness.

The office of road commissioner would then be abolished in each township and all machinery for road work turned over to use of the said county road engineer.

I see as a result of such a set-up an integrated program instead of the present inefficient, part-time work by township commissioners working within artificial, limited areas. For instances where our township is not able to interest anyone in working the roads because the job is not a full time one, full time workers could be employed by the engineer over the broader expanse of the county. Likewise better machinery could be employed to fuller advantage.

I have talked to innumerable interested people about such a system and I have yet to find one, including county and township officers, who is not enthusiastically in favor of it in this county.

I wonder if our splendid organization, the IAA, will undertake the additional burden at Springfield of putting through such legislation. I am politically naive but believe that some laws for the common good do occasionally get passed, especially when given a good push by our organized farmers.

At any rate, I shall be happy to learn the reaction of your office to the above ideas.

Donald Mackay
Mackay & Mackay, Attys.
Mt. Carroll, Ill.

ELIMINATE COMMISSIONER

I WAS greatly interested in Mr. Mayfield's article in the December issue of the RECORD. I thought he did a good job in calling attention to the large number of administrative districts and officials in Illinois and implying that this host of administrative officials was a barrier to efficiency.

. . . . House Bill 471 does not provide for the consolidated district to function prior to the next general road election in April of 1951. People interested in roads in Pulaski county have decided that it would be wiser to continue to agitate for improved road legislation rather than to attempt to organize a consolidated district at this time knowing that it could not function until 1951. In event that we do not get any better legislation we contemplate operation under House Bill 471 about 1950. We hope that we will have better legislation.

House Bill 727 pertaining to counties under township organization is better in that it provides for the immediate functioning of the consolidated district. It is more satisfactory to me in that it provides a method whereby the voters themselves make the decision.

Both 471 and 727 are defective in my judgment in that they do not provide for the absorption of the present county highway department within the enlarged district. The policy of having two administrative bodies having charge of the same type of roads within a county is as indefensive as the school policy of maintaining a dual school system. I maintain that any good road district requires 3 points, namely:

1. In charge of a trained highway engineer.
2. Has an adequate outfit of road building and maintaining machinery.
3. Has year around paid personnel.

. . . . To my mind an ideal solution of the organization problem of roads would be the passage of legislation for roads similar to House Bill 575 for schools. It would provide for the exclusion of all incorporated urban communities and exempt the state highways. It would provide for the dissolution of all existing road districts and organizations within the county. In event that the election carried it would provide for all of the roads of the county to be under the supervision of the county highway engineer and under the control of the county board. The law should make some provision as to the qualification of the highway engineer. I mean professional qualification. Some provision should be made for an increase of local revenues preferably by local referendum. Under present law most local districts are levying 16.5c per hundred. That won't provide sufficient revenue even with a good organization. The state government should make a substantial contribution. As a means of encouraging a good local organization the contribution should be increased if the local unit met certain standards of efficiency.

J. C. McCormick
Pulaski County

Editor's Note — We have received quite a number of letters inquiring on the subject of rural roads as a result of Mr. Mayfield's article in the December Record. In the March Record he will answer most of the queries in another article.

LIKES RURAL YOUTH

. . . . As a result of the recent Rural Youth short course I know some of the fellows will be steamed up on the ideas of co-ops in marketing, insurance, etc., and while these are all important I get steamed up on the many young people I've had the pleasure of meeting and getting to know.

For instance, while waiting at Swift's cafeteria for dinner last Monday a young man whom I hadn't seen for at least four years came up, grabbed my hand, shook it and started asking about my family and the neighbors just as if he left only yesterday. It took me a few seconds to place his name but we had a nice talk together. He formerly worked near my home and is now a meat cutter in a locker down in the southern part of the state.

Possibly I'm a little older than some of the R. Y.'ers but I can remember when the city kids thought they had it all over the farm boys and girls. Now the situation has changed for they ask "Where do you go for we never see you anymore?" We answer, "Oh, last week we bowled up in Polo, went down to LaSalle county to a formal dance, over to Rock Island to a banquet and next week we entertain the Whiteside kids here in P-town." And they answer something like this, "Gosh you're lucky, all I did was go to two shows." I'll admit home is a good place to be once in a while but if I live to be 60 or 100, die with 10 cents or $100,000, I'll have memories.

Now that I've had the opportunity to attend State Camp, the short course, appear on WLS, be a state committee member, and attend Farm and Home Week, the IAA and AFBF annual meetings, I feel not so much on the receiving end as the giving end of R.Y. work.

I think we can challenge any organization that has young people for its members and whose enrollment is open to almost anyone who cares to attend and still attract men and women who are the best the community has to offer. On the average I think you'll find that they are all leaders in their clubs, churches and community affairs.

Geo. Matthews
Whiteside County

NEWS and VIEWS

Farm Home IS SOURCE OF STRENGTH AND STABILITY

AS A great source of strength and stability for America, the farm home also can be a source of strength in the world quest for peace. This was the hope expressed by leading farm women attending the 13th annual convention of the Associated Women of the American Farm Bureau Federation.

The meeting was held in connection with the American Farm Bureau Federation convention in Chicago in December. It attracted several hundred women representing 1,278,000 farm women in every corner of the nation.

Concerned with the uneasy international situation, one of the resolutions approved by the Associated Women heads: "Our concern for the future lies also in the building of a world in which families can live together in peace."

The convention urged farm women to take an active part in their local elections. They also were asked to keep well-informed on all political issues to enable them to distinguish facts from fiction.

Also recommended was further action for the establishment of health and hospital facilities in rural areas easily available to farm people.

On education, the Associated Women said: "There can be no assurance of peace unless all people are well-informed and capable of thinking for themselves."

On the farm home a resolution reads: "It will take many things to make farm homes comfortable." The resolution went on to point out the need for kitchen modernization, and the need for electricity and running water.

Presiding over the Associated Women's convention was Mrs. Roy Weagly of Maryland who said: "There is neither a nation nor a generation so secure that it cannot experience calamity as the result of its own ignoring of the fundamental laws of truth and justice."

Speaking for the AFBF in greeting to the Associated Women, AFBF Secretary Wilfred Shaw said: "You render a great service to the nation by sending fine young farm people to the cities. You women carry the chief responsibility for the social life and welfare of rural areas. Farm women have a broad program of work that men can never do."

Chosen on the basis of outstanding 4-H achievement to represent 45,000 Illinois club members at the National 4-H Club Camp in Washington, D. C., next June are: Top left, Robert G. Willrett, DeKalb county; top right, Athylin Harris, Pulaski county; bottom left, Meta Keller, La Salle county; and bottom right, Gilbert Blankenship, Kendall county.

The resolutions committee for the 13th annual convention of the Associated Women of the American Farm Bureau Federation are shown together during the meeting at the Hotel Sherman in Chicago. Left to right: Mrs. Haven Smith, Neb., Midwest; Mrs. Charles DeShazo, Va., South; Mrs. Alfred Lunn, Mass., Northeast; Mrs. Raymond Sayre, Ia., chairman; and Mrs. C. S. Stroh, Colo., West.

The impressive Sunday evening candlelight service which has become a custom with Associated Women was conducted under the direction of the Rev. Clifford Newham of the Covenant Methodist Church, Evanston, Ill. Wilson Mount of Tennessee led the singing and sang a Christmas solo.

Also presenting a Christmas program of choral music was the International Harvester Company men's chorus of Chicago.

Among the speakers appearing on the Associated Women program were Glenn Bunting of the Central Farmers' Fertilizer Company, formerly research director for the Illinois Farm Supply Company. Bunting spoke on the importance of nutrition in human health and how it can be balanced with proper fertilizers applied to our farms.

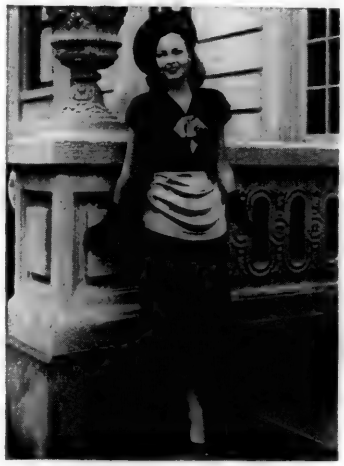
LONGER SKIRTS



Many of the dresses in your closet will seem too short this fall. Some of these may be let down at the hemline while others may be restyled for extra length. For example, this picture illustrates a short black crepe dress refashioned into a longer model with aqua satin apron effect. The skirt is lengthened by means of an insertion of fabric under the apron. Added hip fullness is achieved by a large bustle bow of matching satin at the back. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

the medical profession and their struggle for recognition by their male colleagues. Dr. Chess maintained that the future is bright for farm girls in the medical profession especially those who are planning to return to rural areas where doctors are so urgently needed.

The importance of farm women in the eyes of the radio broadcaster was brought to the attention of the women atteending the convention by Dorothy Lewis, president of the National Association of Women Broadcasters. Her subject was "Radio and the Farm Family."

Emily Taft Douglas, former congresswomen from Illinois, told of some of her experiences as a member of Congress and urged more women to take part in politics. She was particularly outspoken in asking support for the Marshall Plan for European recovery.

John Strohm of Woodstock, Ill., spoke on agricultural conditions inside Russia.

One of the most interesting lectures was given by Mrs. Charles W. Sewell, administrative director of the Associated Women and a delegate to the meeting of the Associated Country Women of the World in Holland last fall. Mrs. Sewell illustrated her lecture with kodachrome slides showing her visit in the low countries, France, England and Switzerland.

Honor Two Advisers

MRS. Clara Greaves Sweeney, home adviser in McHenry county, and Deborah Solliday, Macoupin county home adviser, were among the 39 selected from the nation to be honored for outstanding service at the National Home Demonstration Agents conference held recently in Chicago.

Mrs. Sweeney, home adviser in McHenry since 1927, has expanded her program steadily to reach greater numbers of adults and youth and last year reached nearly 1,000 persons in this work.

Miss Solliday has worked as home adviser for 14 years in Livingston, Mason, and Macoupin counties where she has keyed her programs to the needs of her community.

Guard Future With U.S. Savings Bonds

THE early thirties was a period of American history we would like to forget. It was a period of uncertainty, insecurity, unemployment, incredibly low farm prices, farm foreclosures, and unrest.

We who lived through those years hope they never will happen again. But there is no assurance something similar won't return to plague us. No man can tell.

What can we do to ward off some of this feeling of uncertainty about the future? Why not follow the advice contained in the Biblical parable of the seven fat years and the seven lean years? Let's salt away some of those excess dollars in United States Saving Bonds. They'll be there with interest in the years ahead when we may need them most.

HOLIDAY TOUCH

For a Valentine's Day touch to your favorite macaroni and cheese recipe, cut pimiento into thin strips and shape into hearts. Garnish the top of the casserole with the hearts before baking. The pimiento proves delightful flavor contrast as well as decoration.

Mrs. Roy C. Weagly, president of the Associated Women of the American Farm Bureau Federation lights the large women's candlelight service candle. Looking on are, left to right: Mrs. Charles W. Sewell, administrative director, Associated Women; Mrs. Dorothy Lewis, president of the National Association of Women Broadcasters, who addressed the convention; and Dr. Dorothy Chess, who spoke on "Medicine as a Career for the Farm Girl."

Shuman Names 1948 IAA Standing Committees

PRESIDENT Charles B. Shuman announces the following standing committees appointed from the board of directors of the Illinois Agricultural Association to serve during the year 1948. There are no changes from 1947.

Finance committee: F. E. Morris, Sangamon county, chairman; R. V. McKee, Marshall-Putnam; Milton W. Warren, Piatt.

Organization-information committee: Otto Steffey, Henderson, chairman; John T. Evans, Vermilion; Albert Webb, Franklin.

Public relations committee: K. T. Smith, Greene, chairman; Earl M. Hughes, McHenry; F. E. Morris, Sangamon.

Business service committee: Lyman Bunting, Edwards, chairman; Dan Clarke, Sangamon; Chester McCord, Jasper.

Marketing committee: Homer Curtiss, Jo Daviess, chairman; J. King Eaton, Madison; C. J. Elliott, LaSalle; Edwin Gumm, Knox; E. T. Culnan, Logan.

ILLINOIS FARM TAXES HIGHEST IN HISTORY

(*Continued from page* 13)

The price declines of 1920-21 tended to soften the rising trend, but increases occurred until 1930. Obviously, the rise in farm real estate taxes from 1935-1946 would have been more pronounced, except for the fact that many states adopted sales taxes, state income taxes, etc., during this period, providing substantially increased revenues for both state and local governments.

It should be emphasized again that the recent abrupt rise in Illinois farm real estate taxes from 1945 to 1946 has far exceeded the increase in value of farm property during this period. Most significant, however, is the fact that in Illinois, a constantly increasing proportion of taxes on farm property results from annual payments on long term bond issues. It appears that Illinois farmers might well approach with caution all additional plans which may add to the cost of local government. The history of Illinois property taxes is sufficient to show that when and if farm incomes are drastically cut, the cost of local government may not decline correspondingly.

A sale of heifer calves for the benefit of Future Farmers and 4-H youngsters will be held Saturday, Feb. 28 in the stock pavilion on the campus at Normal. All calves offered will be Bang's and TB free.

Prognosticator

We chuckle at the legend of the ground hog and his shadow, yet he is wiser than some of us. It matters little to him whether his prediction is right or wrong, and he gets a lot of publicity. A far more serious prognostication is made by the farmer who surveys his farmstead and thinks, "I'll have no fires this year, so I'll carry no insurance." A really wise farmer takes every possible precaution against fire, it's true. But in addition to this "ounce of prevention," he also makes sure that the "pound of cure" will be there if an unavoidable fire breaks out. This year, when the ground hog stumbles out to see his shadow, let him remind you to stop and see your Country Mutual Fire Company representative at your Farm Bureau office. Let him build you a real fire protection program at minimum cost.

"FOR WHOM THE BELL TOLLS"

Whenever a family sized farm unit fails, there is a loss not just to the farmer and his family and his community. All agriculture loses when one farm family fails. For the family sized, owner-operated farm is the heart of agriculture, and conditions that cause one farm failure can cause an epidemic of farm failures. Your Farm Bureau, through its many services — legislative, insurance, research, education, cooperative buying and selling — through its every effort is working to make farming an attractive, stable business, to make farm ownership something within reach of every young man. Farm Bureau is helping our generation; the next generation will need it even more. So get your neighbor to enlist in this cause.

WHEN YOU STEP OUT...

... LIFE INSURANCE STEPS IN

MAXIMUM PROTECTION — MINIMUM COST

It is not a pleasant thought, but an empty CHAIR at the head of the table can quickly mean a bare table. With long years stretching ahead in which children must be fed and clothed and housed and educated, it is wise to give serious thought to expanding your family's insurance protection NOW.

Your friendly Country Life insurance representative will help you figure how much money your family would need for security. And he will show you how to get this security at a low cost. There is no obligation to buy. But you have a duty to your family to investigate. Do it NOW.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

IT'S A FREE COUNTRY

By President Charles B. Shuman

IN Hitler's Germany, everyone of legal age went to the polls to vote on election day. Of course, there was only one party to vote for but the secret police made sure that a ballot was marked by each citizen. Yes, this is a free country and the police will not force you to vote in the primary election on April 13. In fact, at least two-thirds of the eligible voters in Illinois will probably be "too busy" to fulfill this prime essential to good citizenship.

Is it any wonder that we hear rumors of "deals" between party leaders or that the party machine designates a "slate"? These schemes would not even be attempted if all of us were expected to appear at the polls. People sometimes lose their freedom by force of arms, but more often lack of interest in their own government results in dictatorship.

Organized farmers have both a responsibility and an opportunity in this election year. Many of the candidates for office are proven friends of agriculture. They have not been afraid to stand up and be counted on controversial issues. It is our responsibility to actively support those candidates who have proven by their courageous and independent action that they understand and appreciate our problems. Examine the voting records of your congressmen and members of the legislature as published in this issue of the RECORD.

The Taft-Hartley labor law was aggressively supported by the Illinois Agricultural Association in Congress. Other organized groups are now using every means to defeat those congressmen who voted for this measure. Illinois farmers will not miss this opportunity to express their appreciation for a job well done.

The campaign period just before the primary election is the best time to contact candidates for public office with suggestions for their future guidance. Farmers should take advantage of this opportunity to become acquainted with all candidates. The legislative program of your organization is of assistance to candidates for public office because it represents a united voice for agriculture. We have urged farmers to support those candidates who have demonstrated their appreciation and respect for this voice of agriculture, rather than attempting to secure pledges to vote for certain measures.

In this connection, I want to call attention to the efforts now being made by several urban organizations to obtain definite commitments from candidates for the legislature. A serious attempt will be made to obtain a large portion of state sales tax revenue for the exclusive use of city governments.

I hope that every aspirant for state office will read and ponder well the action of the voting delegates at the last annual meeting of the Illinois Agricultural Association. It reads in part as follows: "The sales tax is paid by all citizens, not merely by those living within the corporate limits of cities. It would be unfair to pay over to cities, taxes which have been paid by all citizens, many of whom reside outside the corporate limits of a city. We oppose the distribution of state sales tax funds to cities for local governmental purposes."

Yes, this is a free country. May we all help keep it that way by voting at the polls on election day, April 13, each in accordance with his own best judgment and information.

MEMBERSHIP PASSES 150,000

RESULTS OF FARM BUREAU DRIVES AMAZE VETERAN CAMPAIGNERS

IT WAS mid-January and the coldest day of the year. The thermometer dipped to 16 below zero. Everett Ege dressed and walked gingerly out to his barn. He milked, then fed his cattle and hogs.

It was a grand day to stay indoors. But Ege had planned it differently. After a hearty breakfast, he changed into clean overalls, told his wife he'd be gone, and was off in his car headed down the road toward a neighboring farm.

That bitter cold January morning Everett Ege planned to talk to his neighbors about Farm Bureau. He himself has been a Farm Bureau member in Whiteside county for 26 years. He has worked on nearly every membership drive Newton township has ever had.

Everett Ege, without realizing it, was a better promoter of Farm Bureau than any person his organization could hire. "I have been a member from the day I started farming," he would tell his friends in a calm, deliberate manner. "I know it's a good thing for farmers or I wouldn't be here asking a neighbor to join."

His argument carried weight. Immediately after dinner Everett signed his first new member, Joe Medema, whom he had known for 20 years. Before the drive ended Ege signed 7 new members, and received the award for bringing in the most members during the campaign.

IAA-Farm Bureau membership was 150,015 on February 1, 1948, according to O. D. Brissenden, IAA organization director.

Throughout the state 7,450 volunteers, farmers like Everett Ege, will spend their time and energy to bring new farm families into the Farm Bureau circle. Membership drives similar to the one launched in Whiteside will continue throughout the year.

The January drives, first of the new year, have amazed even the most veteran campaigners. In Whiteside, Ege and his neighbors signed 174 new members. That same week across the state in Vermilion county workers signed 258 in what will probably be the biggest drive of the year.

DeKalb, home of Farm Bureau, signed 143 in a county that already had 300 more members than farms. In Marion county one worker, Eugene Shufeldt, signed 31 by himself.

Volunteers in Jefferson county set a new kind of record. Each of the 63 workers signed at least one new member. Other results: Hancock, 117 new members; Hamilton, 46; Ford, 93; Richland, 98; Will, 158, and Marion, 109.

In every section of the state the report is the same: Farmers are more willing to join Farm Bureau than ever before. As District Organizer Harry Claar of Watson says: "Non-members are not nearly as 'wild' as is commonly thought."

Where are the new members coming from? Burl Hornbeck, Winchester, also a district organization director, says: "A good many veterans are starting to farm. I would place the tenant first, owner-operator second, and landlords third." The drives aren't bringing in many associates.

The results of these drives bring fresh proof that farmers understand better than ever before the values of organization. More than 150,000 farm families now belong to Farm Bureau in Illinois.

Much of the credit for building this strong farm group must go to the volunteer workers, personified by Everett Ege, who have given of their time and energy to better the lot of their neighbors.

These men deserve the highest praise. Of them it can be said: They are their brother's keeper.

NEW CO-OPS RAISE... ...HOG PRICES

By LEW REISNER
Field Editor, IAA RECORD

THREE counties in Western Illinois in the center of the greatest hog producing area in the nation have joined the Illinois Livestock Marketing Association and are buying hogs direct from their farmer patrons.

These counties are: Whiteside, Henry, and Mercer. Mercer is also buying for the south and Whiteside for the north half of Rock Island county. The yards are located at Erie, Cambridge, and Aledo.

Bert Horan, Mercer county farmer and one of the organizers of the Aledo Livestock Marketing Association, pretty well summed up the success of all three yards.

"I have talked with a good many farmers around here," he said, "and have yet to hear one say we haven't raised the price by at least 35 to 50 cents a hundred." Farmers interviewed at Erie and Cambridge said: "Yes, at least 50 cents. And more, too, on the poorer grades."

"We've been lucky at Aledo all around," Horan continued. "We didn't think we'd buy as many hogs as we have our first three months." He said at least 12 buyers were competing with the co-op for hogs in their territory.

These new associations are adding daily to the volume being handled by the Illinois Livestock Marketing Association, the state sales agency. Volume builds success. This is particularly true in the field of marketing cooperatives.

All three marketing points have been attacked by competing interests. One commission house, the Hafner Nixon Company, 702 Exchange Building, Union Stock Yards, Chicago, sent pamphlets to rural boxholders in each of the counties. The pamphlet attacked the newly organized cooperatives as a part of a "most daring scheme to doom to destruction the Chicago hog market."

"The practice of packers in buying hogs in the country direct from farmers . . . . now pales in significance when compared with the new scheme now being sponsored by the farmers themselves," the pamphlet warns.

Farmers at each of the three yards said they have received the pamphlets. They felt that few would be taken in by them. Emery Gregory, manager of the Cambridge yards, said that he believed they helped to advertise the yards since every farmer got one. Gregory alleged he was more or less misrepresented in the pamphlet.

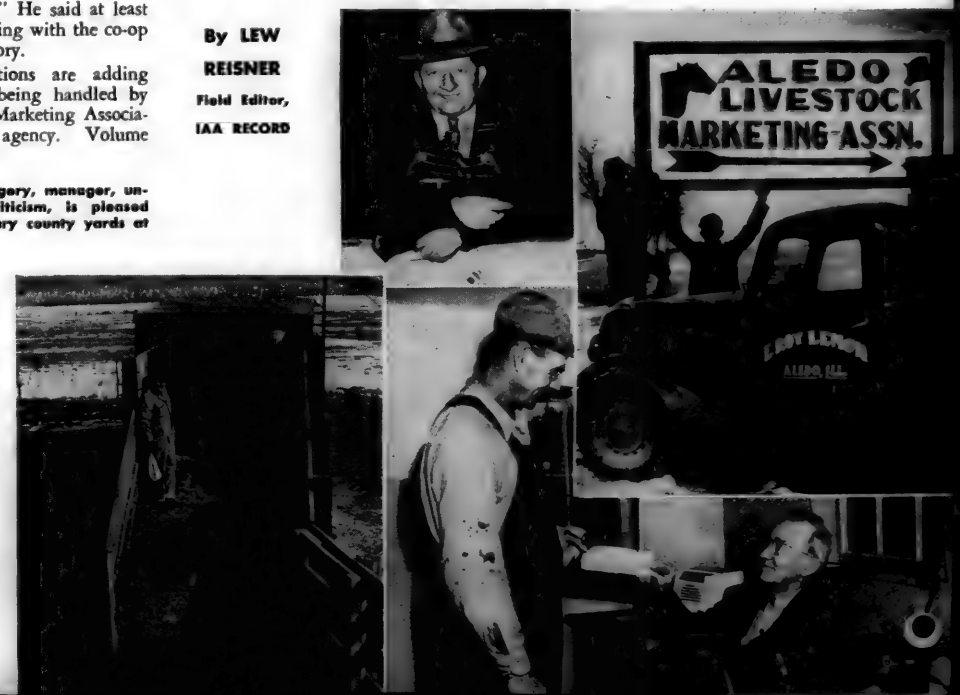
Mercer county in its first three months of operation during October, November, and December, handled 8,604 hogs. Before the cooperative was organized an estimated 90 per cent of the hogs were being sold direct. This would refute the arguments that the cooperative was ruining the hog market.

The office, pens, unloading chutes, and unloading pens and scales cost about $7,000, Horan said. Like all the yards associated with Illinois Livestock they buy from Monday through Friday and until 12 noon of each day. They have set as their 1948 goal the marketing of 50,000 hogs.

The yards at Cambridge have been open since Nov. 3 and volume jumped from 3,425 hogs in November to 6,699 for December.

At Erie in Whiteside county the cooperative started buying Jan. 7 and has been averaging more than 100 hogs a day. Their yards were remodeled but their office building and scales are new. In all, improvements cost between $4,000 and $4,500. Whiteside was the 15th Illinois county to organize.

Farmers can now sell through this expanding marketing service at yards in these cities: Bloomington, Champaign, Decatur, Danville, Shelbyville, Paris, Effingham, Stronghurst, Aledo, Bluffs, Rushville, Cambridge, Erie, Quincy, Elvaston, Freeport, and Lena.



Upper left. Emery Gregory, manager, undaunted by outside criticism, is pleased with success of the Henry county yards at Cambridge. Upper right. Bert Horan, president of the Aledo Livestock Marketing Association, and Roy Lemon, right, supporting sign, worked hard to insure success of Aledo yards. Lower left. Emmett Crandall (right) drives his hogs down chute at Erie yards as Fred Hayen, trucker, and Ansell Nesbitt, manager, stand by. Lower right, Homer McMullen, right, bookkeeper, hands Julius Decker first check written by yards at Cambridge on their opening day.

Here are the Voting Records of Issues Affecting Farmers..

X Are Your Representatives Interested In the Welfare of Agriculture? X

IN ACCORDANCE with action taken by the voting delegates of Illinois Agricultural Association at an annual meeting several years ago, the Board of Directors has authorized and directed the publication of the following statement, together with the records of the members of the 65th General Assembly, as determined by their votes and general attitude on matters of important legislation directly affecting farmers as supported or opposed by the Illinois Agricultural Association.

The Association was interested in and took a position upon numerous measures of interest to agriculture in the 1947 session. These included the appropriation of $15,000,000 of state funds for local township and road district roads, school reorganization, state support for schools, permissive township and road district consolidation measures, property tax limitations, weed and seed law revisions and other matters.

For the most part, the legislation favored by the Association was enacted. The appropriations for the veterinary college and the home economics' building at the University of Illinois were not passed and did not reach a roll call vote. Many of the measures of major interest received the unanimous support of the members voting in each house of the legislature.

On other major agricultural measures very few negative votes were cast and none of these votes in opposition to the Association's position were cast by members from downstate. This resulted in part from the fact that by the time the bills reached roll call stage they had been amended until they were generally satisfactory. The Association opposed some of the amendments adopted but the amendments were not adopted by roll call vote.

For instance, the Association sought an appropriation of $20,000,000 from state funds for local roads. This appropriation was reduced to $15,000,000 in the senate but there was no official roll call upon the amendment reducing the appropriation. In view of this peculiar situation, this report is weighted heavily by the general attitude of members toward, and the support given the legislative program of the Association, including support in committees as well as on the floor of the legislature.

VOTE IN THE PRIMARIES APRIL 13

In line with its long-established policy, the Illinois Agricultural Association publishes herewith the voting records of members of the Illinois General Assembly.

Many of these legislators are candidates for office in the primaries on April 13. The Association urges its members to study carefully the information published in this issue of the Record and to actively support for nomination and election those representatives who, by their records, have proved themselves worthy of confidence of farmers.

Farm people represent only a minority of the population. Only through their united action at the polls, wherein they place the interests of agriculture above parties and personalities, can they hope to maintain fair representation in lawmaking bodies.

Basis of Report

This report is based entirely upon the legislator's record and attitude as observed in Springfield. The Association has not given and obviously cannot be aware of, or give consideration to, the record or attitude upon local problems which may affect the voters' decision.

The first column of the report tabulated below lists the number of regular sessions of the General Assembly during which the respective members have served. The second column carries the legislative record of the legislators as determined by their votes on agricultural legislation during the last regular session, together with their general attitude on legislation supported or opposed by the Illinois Agricultural Association throughout their terms of service.

Ratings Used

A member, to receive a rating of "Excellent" must not only have a satisfactory voting record, but his general attitude in recent legislative sessions must have been generally recognized as actively supporting the Illinois Agricultural Association's legislative program. To achieve an "Excellent" record a member must also have served more than one two-year legislative period and must have taken a favorable position on highly controversial legislative proposals.

First term members, to secure a "Very Good" rating, must have a satisfactory voting record and must have actively supported the Illinois Agricultural Association's legislative program. This rating is the highest given any first term member.

In accordance with the directions given by the delegates of the Illinois Agricultural Association, members of the Association are advised that all members of the present General Assembly seeking re-election who are rated as "Excellent" or "Very Good" are entitled to support by all members and friends of the Illinois Agricultural Association in the coming primary and general election.

The records of members rated as "Good" are worthy of careful consideration in comparison with the qualifications of new candidates seeking office.

ATTEND Your TOWNSHIP MEETING!

YOU can decide how high your property tax levy will be this year! How?

At 2 p.m. on Tuesday, April 6, more than 1400 townships will hold their annual town meetings. In little more than an hour $20,000,000 will be appropriated for the ensuing year.

A big share of your land tax bill will be determined at this town meeting. Here's why. From 75 to 90 per cent of all farm property taxes are levied by the township and school districts in which the property is located.

Therefore, you and your neighbors can control the greatest part of this $20,000,000 tax on your farm property. Most of the balance is controlled by the county board of supervisors.

All tax levies for relief, payment of salaries and expenses of township officers and all other township purposes (except roads and bridges) are made by the voters present in the meeting.

Resident taxpayers must be present if they wish to exercise any control over the township tax levies.

Citizens voting in town meetings represent about the last vestige of government by direct control. The majority vote of citizens prevails in determining the maximum amount of money which may be spent by town officials. It also determines the sum to be raised from property taxes for township purposes for next year.

Illinois farmers generally have opposed altering political boundaries. Now they have a genuine challenge to meet in proving the merits of township government if judged on their present degree of operating efficiency.

Upon request, and to help farmers inform themselves in advance of the April meetings, the IAA property tax department will forward forms to help Farm Bureau members or committees in studying the business affairs of their individual townships.

Remember this! To keep your township taxes from being unduly increased mark April 6 on your calendar. On this day attend your annual township meeting.

How Did Your Congressman Vote on the Taft-Hartley Law ? ? ? ?

FOR a number of years the Illinois Agricultural Association urged the enactment of national legislation to correct abuses in labor management relations and protect the public interest.

The 80th Congress enacted the "Labor Management Relations Act, 1947" and this legislation now is in effect. The IAA and the American Farm Bureau Federation vigorously supported this legislation.

The IAA annual meeting resolutions adopted Nov. 20, 1947 at St. Louis, commended the statesmanship of those members of Congress from Illinois who supported this legislation.

Printed below are the voting records of Illinois Congressmen on the Labor-Management Relations Bill of 1947. The House vote was taken April 17, 1947, and the bill passed by a vote of 308 to 107. On June 20, 1947, the House voted to override the President's veto of the labor bill 331 to 83.

The IAA and AFBF favored passage of the labor bill and overriding of the President's veto.

Gathered at the old Wabash railroad depot in Springfield to participate in the Lincoln Friendship Train ceremonies are some of the Farm Bureau officials who sparked the drive in their respective counties. This was one of the four trains that started out on Lincoln's birthday. Left to right are: George Deppert, Tazewell Farm Bureau treasurer and county chairman; (second man not identified); W. Irving Brown, president, Menard Farm Bureau; James Weaver, Menard; H. P. Becker, Tazewell; Dan L. Clarke, IAA board member, Sangamon; Evan Taylor, Sangamon Farm Bureau president, and Maurice Deal, president, Christian Farm Bureau. Full report on participation will be carried in the next issue of the IAA Record.

Farm INSURANCE HITS ALL TIME PEAK

PROSPERITY on the farm is boosting insurance purchases among farmers to the highest peak in history according to year-end reports presented at the 19th annual insurance roundup of the Illinois Agricultural Association last month in the Edgewater Beach Hotel in Chicago.

More than 700 Illinois Agricultural Association insurance agents and Farm Bureau officers representing every county in the state, attended the meeting. The three IAA associated insurance companies whose business is confined largely to Illinois farmers are Country Life Insurance Company, Country Mutual Casualty Company and Country Mutual Fire Company.

Although ordinary life insurance purchases in the United States for 1947 declined 3.4 per cent from 1946, Illinois farmers bought 11.4 per cent more life insurance through Country Life in 1947 than in 1946, A. E. Richardson, Country Life manager and director of insurance service for the IAA, reported.

J. H. Kelker, manager of the Country Mutual Fire Company said, "It has been necessary for farmers to increase their fire, wind, and extended coverage and crop hail insurance by more than 163 million dollars in 1947."

Frank V. Wilcox, manager of Country Mutual Casualty Company reported that Country Casualty has more than 160 thousand vehicles of Illinois Farm Bureau members insured.

Charles B. Shuman, IAA president, speaking at the evening banquet emphasized the fact that farmers need adequate insurance service more than any other group. The farmer, President Shuman said, needs every practical means of reducing the hazards of his varied operations.

Donald Kirkpatrick, AFBF and IAA general counsel, told the insurance roundup audience, that he believed "we are entering the golden age of agriculture" and predicted that there would be a great growth in Farm Bureau insurance. He said he believed there would be a continued high demand for agricultural products because of the increase in our population, the shifting of 1½ million people from the farms to the city, thus creating more consumers of farm products, and the increased standard of living, plus normal exports.

Officers and members of the Illinois Farm Bureau baseball league meet in Hotel Sherman, Chicago, to discuss rules and regulations for the coming season. At table (far left) are Roy Johnson, secretary, and Otto Steffey, president of the league. At far right is Ebb Harris, vice president. Standing is Floyd Phillips, DeKalb county, chairman of the rules and regulations committee. Insert is Orval Grove, Chicago White Sox pitcher, who addressed the meeting.

Bigger Farm Bureau Baseball Season Predicted for 1948

NO MAJOR changes in rules and regulations resulted from the annual meeting of officers and members of the Illinois Farm Bureau Baseball League in Chicago, Feb. 5. Otto Steffey, Stronghurst, was reelected president, and Ebb Harris, Grayslake, was reelected vice-president of the league. Representatives of 12 counties were present.

The Farm Bureau Baseball League is expected to be bigger than last year when 29 counties took part. Three new counties have signified their intention of taking part next season — Hamilton, Macoupin, and Lake. Counties were requested to make known their intention of joining the Farm Bureau Baseball League by May 1.

They can join by June 1 with the consent of other league members. The baseball for next season was adopted and prices of equipment were discussed. Principal speaker was Orval Grove, pitcher for the Chicago White Sox.

In his talk he made two points; one, more and more major leagues are turning to amateur leagues such as the Farm Bureau Baseball League for prospects; and two, any young man with ambition to become a baseball player should realize it is a long step from high school to the major leagues, and that it would be a good idea to work up the ladder gradually rather than to jump all the way at once.

A movie, "The World Series of 1947," was shown through the courtesy of the American and National Baseball Leagues.

URGE EXPANSION IN HORTICULTURE

Further expansion of the horticultural department of Southern Illinois University was urged recently by the Southern Illinois Horticultural Society.

In asking for added state funds the horticultural society said that horticulture is centered in the southern third of the state and that lack of personnel and facilities at Southern Illinois University makes it impossible to teach students there adequately in this science.

The horticultural society took the stand that this proposed expansion would make possible better teaching of horticulture to many young persons living in Southern Illinois unable to attend school elsewhere. It would also make possible better services to farmers producing fruit and vegetables in this area.

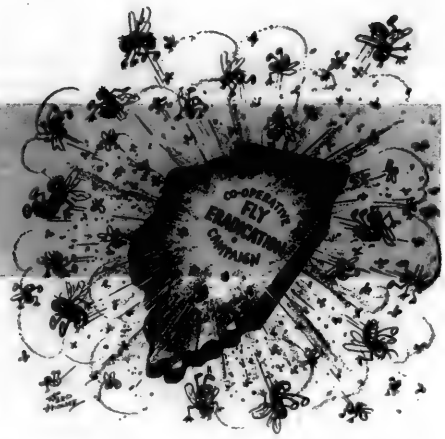
The horticultural society took the stand that this proposed expansion would make possible better teaching of horticulture to many young persons living in Southern Illinois unable to attend school elsewhere. It would also make possible better services to farmers producing fruit and vegetables in this area.

ILLINOIS FLIES

Doomed



FARM and civic groups under the direction of the Illinois Agricultural Association and the Extension Service of the University of Illinois are planning a large-scale campaign to rid the state of flies.

The drive to eliminate this disease-carrying pest is expected to be well underway by late spring, according to George E. Metzger, IAA field secretary, who will direct the campaign for the IAA.

The plan calls for the use of large quantities of the deadly fly-killer DDT to be dusted and sprayed where flies are likely to breed or appear in large numbers. To get the greatest possible results from the DDT used, the war will be waged against flies about the same time throughout the state.

Farm people who have been requested in particular to lend their support to the campaign include the farm adviser, home adviser, AAA chairman, soil conservationist, Farm Bureau board and organization director, dairy interests, milk inspector, vocational agriculture teacher, and any other interested groups.

City people who may be asked to cooperate include the health officer, veterinarian, doctor, sanitary engineer, mayor, newspaper editor, radio manager, druggist, scout leader, and representatives of Rotary, Kiwanis, Lions, American Legion, VFW, chamber of commerce, and women's clubs.

Fly eradication of course would bog down without the help of the individual. Only through the cooperation of everyone in the state can it succeed. For this reason, you are asked to get ready to go into action with DDT at the word from your leaders.

This is a job for every family, rural and urban. You will be asked to clean up all areas where flies may breed around your home. Garbage containers should be treated once a month with DDT for best results. Porches where flies roost should be sprayed. Another effective fly killer is the screen door and window painted with a five per cent DDT solution once a month. Outdoor toilets should be sprayed outside and inside once a month.

Leaders have been asked to set an example by spraying their own buildings, premises and treating their own livestock. They also have been asked to explain to the people of their neighborhoods the worth of the campaign for its sanitary value, elimination of a nuisance and a disease carrier, and its dollar value in contented livestock and dairy cattle.

What can the individual farmer do to help rid the state of flies?

Here are a few suggestions: Haul manure twice weekly to the fields. Handle all fly breeding material such as garbage, rotting straw, etc., as you would manure.

Apply DDT to all surfaces where flies roost including barn ceilings, wall cords, supports, stanchions, building entrances, sheds, feeding pens, board fences, barns, chicken houses, pig pens and outdoor toilets. Farm animals also should be sprayed periodically.

County meetings for last minute instructions and kick-off pep talks are expected to be held throughout the state the last two weeks in April. The first two weeks in April, public demonstrations will be held to explain the use and effectiveness of equipment and show what can be accomplished by spraying.

During the last two weeks of May, every effort will be made to eliminate all fly-breeding places. During this

(*Continued on page* 19)

FRONT COVER

NO picture study of our state would be complete without a view of Chicago, the nation's second largest city and greatest inland port. This is the tenth of our series of cover pictures of historic and picturesque Illinois.

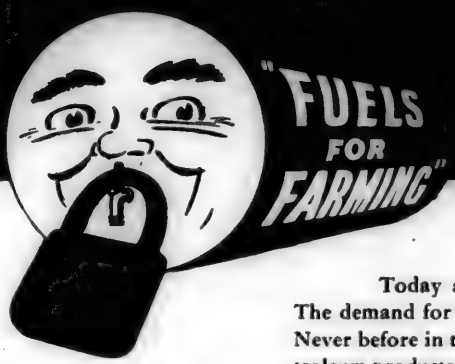
This month's cover shows the double-decked Michigan Avenue bridge over the Chicago river at the site of Fort Dearborn where the city was founded. The bridge connects the downtown shopping district with the near north side business area in which the Illinois Agricultural Association offices are situated. The IAA offices lie two blocks west of the north end of Michigan Avenue seen in picture.

White structure at left is the Wrigley Building. In left foreground is the London Guaranty Building. Light colored building on right is the Sheraton Hotel, formerly the Medinah Club. Next to it is the Tribune Tower, and in right foreground is the 333 North Michigan Avenue Building.

Don't Squander a Drop!

SAVE!

TO PUT IN YOUR CROP!



Today an emergency exists in petroleum fuels. The demand for these fuels exceeds all possible supplies. Never before in the nation's history have we produced petroleum products in such great volume—production greatly exceeds even the peak war years. However, demand has been growing even faster than production. As a result there just will not be all the fuel wanted by everybody whenever they may want it.

Your company is doing its best to obtain adequate supplies to meet your farming needs and will continue to serve you to the best of its ability. Your petroleum salesman hopes to supply you with an amount of "farming fuel" equal to that of last year. Unless you save it for that purpose, both you and your salesman may be embarrassed in the middle of the spring planting season.

We sincerely urge you to:

1. Accept early deliveries of your spring allotments and *save them* for the *farming season.* They are your "*Fuels for Farming.*"
2. Save every gallon of motor fuel possible for *farming purposes.*
3. Use every means to *increase the efficiency* of your farming motors.
4. Avoid waste in any form.

Conservation seems to be the most practical means farmers can use to aid in solving this problem. Farmers must conserve fuel if they are to have the gallonage so vital in present day farming operations. If everyone "conserves a little," there may be "enough for all."

This messsge is presented in behalf of 104 Farm Bureau Type Cooperatives that are members of

ILLINOIS FARM SUPPLY COMPANY

608 S. DEARBORN ST. • CHICAGO 5, ILLINOIS

Chatting together during Farm and Home Week are AFBF President Allan B. Kline, IAA President Charles B. Shuman, Dean H. P. Rusk, and Fred Meers, president of the Champaign County Farm Bureau. Right: A natural gas-burning tractor attracted large crowds during Farm and Home Week.

FARMERS URGED:

"BE CAUTIOUS"

FARMERS were advised by Allan B. Kline, president of the American Farm Bureau Federation, to "act as if farm prices were going down further." Kline's warning, spoken at Farm and Home Week at the University of Illinois last month, came as grain prices tumbled the legal limit several successive days.

Kline advised farmers that "now is the time to reduce inventories to the limit without drastic cuts in crop production in 1948, and don't" he said, "borrow money now with the intention of paying it back in 1956."

Farm economists on the program were unanimous in pointing out that going heavily into debt now is extremely hazardous and an invitation to disaster.

About 5,000 persons attended the week-long sessions of the College of Agriculture's 47th annual Farm and Home Week and heard a wide variety of talks on all phases of farm living and farm operation.

L. J. Norton, professor of agricultural economics at the university, pointed out that the harvesting of grain next fall will make greater amounts of food available all over the world. With this situation in prospect, he said, prices are likely to be lower even before the crops are harvested.

"If we have normal grain crops next year," Norton said, "livestock feeding ratios will be more favorable in the winter of 1948-49 than they are this winter. It is a question whether Illinois farmers are showing good judgment in reducing their sows to farrow in the spring of 1948 by 13 per cent as they are reported to be planning."

Farmers were much concerned about the steady price drop during Farm and Home Week and were constantly inquiring about the market situation. Asked if the slump in prices would affect their farming operations, most said it would scarcely affect them at all. Most of those asked said they planned to plant large crop acreages as in the past several years.

Said George Huffman, Cass county: "I don't quite know what to expect. But I can't see that I'll change anything in '48."

Elmer Olson, Vermilion county: "No change. I'll stay with it. Last year I lost $3,000 by selling corn too soon. Now I've lost $3,000 by not selling soon enough."

Joe Christensen, Kankakee county: "We're cutting down on bean acreage, increasing corn acreage. We would have done so with or without a price drop."

John Gaspardo, Livingston county: "No changed planned right now but may before I get into the fields. If they start to lay men off in the factories prices will slip badly."

C. J. Kuster, GI farm instructor, McLean county: "Farmers in McLean county may sell out sooner on their cattle. It won't change their hog plans. Most are sitting tight."

Commenting on the price drop, Dean H. P. Rusk of the College of Agriculture said: "This would have happened long ago were it not for our heavy food exports to Europe."

H. C. M. Case, head of the university department of agricultural economics: "There is little to discourage good prices for farm products for the balance of 1948."

Roy Edwards, Champaign county cattle feeder: "The honeymoon is over. We are in for lower prices."

"The Place of Farm Organizations in the Development of Agricultural Policy" was discussed at an agricultural policy meeting by Vice President F. E. Morris of the Illinois Agricultural Association.

F. E. Morris

Farmer organizations, Morris said, are beginning to plan and formulate agricultural policy as well as help carry it out. We feel that the general economic picture is more important than any specific program farmers could advocate. This, Morris said, is an abrupt departure from policies advocated by farmers in the past.

Walter E. Gamble, University butcher, shows farmers how meat ought to be cut during Farm and Home Week.

IAA President Charles B. Shuman and several members of the IAA staff also appeared on the Farm and Home Week program.

The numerous talks included many valuable hints that mean more dollars in the farmer's pocket. For instance, A. L. Neumann of the animal science department pointed out the importance of feeding experiments as related to pig mortality. In an Illinois trial, he said, a ration containing 10 per cent alfalfa produced 97 per cent strong pigs and 97 per cent of the pigs farrowed were weaned.

As usual the mechanical engineering building on the south end of the university campus was a beehive of activity as farmers swarmed in to get a look at the latest in machinery. Most of the interest appeared to be centered about the crop driers, a soil tiller, and a tractor operated by liquefied natural gas. It was predicted that the tight farm machinery supply situation may ease considerably in late 1948.

H. R. Franklin Named Illinois Corn King

HAROLD R. FRANKLIN, St. Anne, Kankakee county, won the coveted crown as 1947 Illinois Corn King by earning the highest score in the 10-acre corn growing contest sponsored by the Illinois Crop Improvement Association.

An annual event among the state's top grain producers, the winning growers were announced at Farm and Home Week held last month on the campus of the University of Illinois at Champaign-Urbana.

Franklin's winning plot yielded 128.73 bushels an acre, among the top four in yield of the dozens entered. His relatively low total cost of $358.12 for all expenses cinched the crown in this highly competitive contest. Three points are considered in scoring: Yield, total cost, and quality of the kernel.

The highest yield recorded was 141.25 bushels an acre on the 10-acre field grown by H. T. Thompson, Galesburg, Knox county.

William A. Feldott of Plainfield, Will county, won the 10-acre soybean contest. His beans yielded 42.84 bushels an acre and cost 65.5 cents a bushel to produce. Second place went to Verle Steele of Table Grove, Fulton county. His beans yielded 36.93 bushels and cost 90 cents a bushel to produce.

Franklin, the corn king, won on a field of corn grown on old sod that had been fall plowed and to which he had added $64.37 of commercial nitrogen, $21.88 of phosphorus and $12.23 of potash, a total of $98.48.

The soil was a silt loam. No manure or lime had been added. The corn had been drilled in rows 40 inches apart and the field had been gone over twice with a rotary hoe and twice with a cultivator.

Total cost for labor, machinery costs, seed, overhead, harvesting, taxes, and land rent came to $358.13. It cost Franklin about 26 cents a bushel to grow the corn.

Franklin was winner in Section 3. Other sectional winners were: Section 1, L. A. Abbott, Whiteside county, 135.99 bu., $433.05 total cost; Section 2, H. T. Thompson, Knox, 141.25 bushels, $465.86 cost; Section 4, Paul J. Stafford, Edgar, 97.66 bushels, $338.32; Section 5, Oscar Leighty and Sons, St. Francisville, Lawrence, 95.06 bushels, $300.22.

Amateurs try their hand at judging beef cattle at the stock pavilion during Farm and Home Week.

Crop drying machines were the center of interest at the machinery exhibit during Farm and Home Week.

Officers and directors of the Illinois Association of Farm Advisers are shown shortly after their election during Farm and Home Week. Left to right, front: Ed Garlich, Morgan; Retiring President William Coolidge, Livingston; L. E. McKinzie, Edgar, president; H. N. Myers, De Witt, vice president; O. O. Mowery, Macoupin, secretary-treasurer; back row: Art Johnson, Kane; Carl F. Moos, Randolph; A. J. Rehling, Henderson; Arnold Rowand, Ford; Thurman Wright, White; and C. S. Love, Christian.

Chatting together during Farm and Home Week are AFBF President Allan B. Kline, IAA President Charles B. Shuman, Dean H. P. Rusk, and Fred Meers, president of the Champaign County Farm Bureau. Right: A natural gas-burning tractor attracted large crowds during Farm and Home Week.

FARMERS URGED:

"BE CAUTIOUS"

FARMERS were advised by Allan B. Kline, president of the American Farm Bureau Federation, to "act as if farm prices were going down further." Kline's warning, spoken at Farm and Home Week at the University of Illinois last month, came as grain prices tumbled the legal limit several successive days.

Kline advised farmers that "now is the time to reduce inventories to the limit without drastic cuts in crop production in 1948, and don't" he said, "borrow money now with the intention of paying it back in 1956."

Farm economists on the program were unanimous in pointing out that going heavily into debt now is extremely hazardous and an invitation to disaster.

About 5,000 persons attended the week-long sessions of the College of Agriculture's 47th annual Farm and Home Week and heard a wide variety of talks on all phases of farm living and farm operation.

Walter E. Gamble, University butcher, shows farmers how meat ought to be cut during Farm and Home Week.

L. J. Norton, professor of agricultural economics at the university, pointed out that the harvesting of grain next fall will make greater amounts of food available all over the world. With this situation in prospect, he said, prices are likely to be lower even before the crops are harvested.

"If we have normal grain crops next year," Norton said, "livestock feeding ratios will be more favorable in the winter of 1948-49 than they are this winter. It is a question whether Illinois farmers are showing good judgment in reducing their sows to farrow in the spring of 1948 by 13 per cent as they are reported to be planning."

Farmers were much concerned about the steady price drop during Farm and Home Week and were constantly inquiring about the market situation. Asked if the slump in prices would affect their farming operations, most said it would scarcely affect them at all. Most of those asked said they planned to plant large crop acreages as in the past several years.

Said George Huffman, Cass county: "I don't quite know what to expect. But I can't see that I'll change anything in '48."

Elmer Olson, Vermilion county: "No change. I'll stay with it. Last year I lost $3,000 by selling corn too soon. Now I've lost $3,000 by not selling soon enough."

Joe Christensen, Kankakee county: "We're cutting down on bean acreage, increasing corn acreage. We would have done so with or without a price drop."

John Gaspardo, Livingston county: "No changed planned right now but may before I get into the fields. If they start to lay men off in the factories prices will slip badly."

C. J. Kuster, GI farm instructor, McLean county: "Farmers in McLean county may sell out sooner on their cattle. It won't change their hog plans. Most are sitting tight."

Commenting on the price drop, Dean H. P. Rusk of the College of Agriculture said: "This would have happened long ago were it not for our heavy food exports to Europe."

H. C. M. Case, head of the university department of agricultural economics: "There is little to discourage good prices for farm products for the balance of 1948."

Roy Edwards, Champaign county cattle feeder: "The honeymoon is over. We are in for lower prices."

"The Place of Farm Organizations in the Development of Agricultural Policy" was discussed at an agricultural policy meeting by Vice President F. E. Morris of the Illinois Agricultural Association.

F. E. Morris

Farmer organizations, Morris said, are beginning to plan and formulate agricultural policy as well as help carry it out. We feel that the general economic picture is more important than any specific program farmers could advocate. This, Morris said, is an abrupt departure from policies advocated by farmers in the past.

IAA President Charles B. Shuman and several members of the IAA staff also appeared on the Farm and Home Week program.

The numerous talks included many valuable hints that mean more dollars in the farmer's pocket. For instance, A. L. Neumann of the animal science department pointed out the importance of feeding experiments as related to pig mortality. In an Illinois trial, he said, a ration containing 10 per cent alfalfa produced 97 per cent strong pigs and 97 per cent of the pigs farrowed were weaned.

As usual the mechanical engineering building on the south end of the university campus was a beehive of activity as farmers swarmed in to get a look at the latest in machinery. Most of the interest appeared to be centered about the crop driers, a soil tiller, and a tractor operated by liquefied natural gas. It was predicted that the tight farm machinery supply situation may ease considerably in late 1948.

H. R. Franklin Named Illinois Corn King

HAROLD R. FRANKLIN, St. Anne, Kankakee county, won the coveted crown as 1947 Illinois Corn King by earning the highest score in the 10-acre corn growing contest sponsored by the Illinois Crop Improvement Association.

An annual event among the state's top grain producers, the winning growers were announced at Farm and Home Week held last month on the campus of the University of Illinois at Champaign-Urbana.

Franklin's winning plot yielded 128.73 bushels an acre, among the top four in yield of the dozens entered. His relatively low total cost of $358.12 for all expenses cinched the crown in this highly competitive contest. Three points are considered in scoring: Yield, total cost, and quality of the kernel.

The highest yield recorded was 141.25 bushels an acre on the 10-acre field grown by H. T. Thompson, Galesburg, Knox county.

William A. Feldott of Plainfield, Will county, won the 10-acre soybean contest. His beans yielded 42.84 bushels an acre and cost 65.5 cents a bushel to produce. Second place went to Verle Steele of Table Grove, Fulton county. His beans yielded 36.93 bushels and cost 90 cents a bushel to produce.

Franklin, the corn king, won on a field of corn grown on old sod that had been fall plowed and to which he had added $64.37 of commercial nitrogen, $21.88 of phosphorus and $12.23 of potash, a total of $98.48.

The soil was a silt loam. No manure or lime had been added. The corn had been drilled in rows 40 inches apart and the field had been gone over twice with a rotary hoe and twice with a cultivator.

Total cost for labor, machinery costs, seed, overhead, harvesting, taxes, and land rent came to $358.13. It cost Franklin about 26 cents a bushel to grow the corn.

Franklin was winner in Section 3. Other sectional winners were: Section 1, L. A. Abbott, Whiteside county, 135.99 bu., $433.05 total cost; Section 2, H. T. Thompson, Knox, 141.25 bushels, $465.86 cost; Section 4, Paul J. Stafford, Edgar, 97.66 bushels, $338.32; Section 5, Oscar Leighty and Sons, St. Francisville, Lawrence, 95.06 bushels, $300.22.

NEW PLAN GIVES COUNTY BETTER CHANCE TO EXPRESS

Farmers Organize
COUNTY COMMITTEES

By JIM THOMSON
Asst. Editor, IAA RECORD

ORGANIZATION of county committees on roads, schools, health and safety, taxes, and animal health are now well underway. Each county Farm Bureau has been asked to organize a committee of five men, each to specialize in one of the subjects listed above. It is hoped that these committees will help make the state organization, that is, the Illinois Agricultural Association, more responsive and closer to the average farmer's opinion on state and national issues.

These committees also are expected to bring about more intelligent participation by a greater number of Farm Bureau members in expressions of opinion as contained in the IAA resolutions. IAA resolutions are annual statements of policy offered as farmer opinion on important public questions.

Over the period Jan. 21 through March 25 committees were being organized under the direction of I. E. Parett, IAA secretary of general services, and the directors of his departments — John K. Cox, rural school relations; Charles Mayfield, road improvement; W. W. Whitlock, health and safety; Bert Vandervliet, taxation; and Dr. Don Van Houweling, veterinary medical relations.

At the opening meetings, Parett said he would be pleased if 30 per cent of the counties organized the first year. Now it appears, he said, that 60 per cent will have committees the first year.

Organization of county committees under the direction of Parett's division is part of a larger plan. This larger plan calls for the setting up of committees in each county on (1) organization and information, (2) marketing, (3) business service, and (4) public relations, for example, taxes, schools, etc.

Explaining the plan and its purposes to the district meetings at which several counties were represented, Parett said: "Problems arising at both county and state levels often require quick action by well-informed, trained leaders. These committees will make an intelligent response possible within a short time."

Parett suggested during the district meetings that members of the committees be chosen because of their interest and understanding of a particular subject. "Don't get on a committee," Parett said, "unless you feel that you want to do something constructive for agriculture; unless you believe in our cause."

The new plan to make the organization more responsive to the membership also calls for the county committees in each state senatorial district to get together with their state senator and three state representatives for a dinner meeting at least once during the year when the general assembly is in session. The meeting would be for the purpose of getting the lawmakers acquainted with the men who are qualified to tell them quickly the feeling of organized farmers on particular legislation.

Must Know Answers

"You committeemen must know the answers," Parett said. "You are going to ask your senators and representatives to vote for particular bills in the interest of Illinois agriculture. When they ask you the question 'Why?' You are going to have the answer. Your committee must see to that."

During the meeting, Cox, who has worked with the legislature in the interest of IAA-sponsored legislation told the committeemen something about the procedure in Springfield. Cox made it clear that agriculture must speak in a strong, clear voice to be heard. Therefore, agriculture must know without doubt what it wants at Springfield. Cox then pointed

out that the committees can help to remove any doubt as to what legislature wants.

Mayfield, who also has taken part in proceedings at the state legislature, added that farm legislation is presented in a better light when it comes as a sincere need from the farmers in the counties. "You," he told the audience "can make your voice heard in Springfield through your county committees."

In the five separate sessions held in the afternoon, the men interested in particular farm problems gathered together to organize their committees.

Taxes

Taxes — Vandervliet explained how local government operates in Illinois and pointed out that recent changes in assessment laws and tax rate limits have increased the taxing powers of local governments and also the responsibility of local officials. He also explained the procedure for making surveys of local government, road districts, and school districts. Vandervliet showed the assembled committeemen how they could participate effectively in a town meeting.

Schools

Schools — Cox explained to the schools group what his department had accomplished to date and what remains to be done. He pointed out that the IAA School Report of 1944 is the basis of school policy followed by his department. Cox spoke on policy and IAA-sponsored legislation. School committeemen then discussed what contribution they could make to the betterment of rural schools. Cox promised to keep individual school committeemen up to date on pertinent school information with letters, etc.

Roads

Roads — Mayfield summarized the three road systems — state, county, and local. He then explained the historical background of the IAA's interest in the road problem running back 25 years. His summarization of the finance and administration of the three systems included explanations of state-aid grants, federal aid, and the motor fuel tax. Mayfield also pointed out the present difficulties and problems concerning the improvement of farm-to-market roads. The committeemen were then encouraged to discuss their local road problems and evaluate their local road administration. They also compared the relative merits of the use of the last $15 million state grant on farm-to-highway roads.

Health—Safety

Health and Safety — Whitlock pointed out that one of the most important things the county health and safety committee can do is to conduct local studies and surveys. Such studies could include health, accidents, and the state or rural fire fighting facilities. Members can do much to promote safety mindedness, Whitlock said, with exhibitions, demonstrations, statistics, and the use of posters and publicity materials. Whitlock promised committee members safety publications and materials and offered to act in an advisory capacity at any time possible.

Animal Health

Animal disease — Dr. Van Houweling explained that the practicing veterinarian is the first line of defense against animal disease. However, he said, assistance to counties and individuals is available through the IAA, the U. S. Department of Agriculture, the Illinois Department of Agriculture, and the University of Illinois. Van Houweling pointed out what farmers can do in an organized effort to combat disease, possible changes through legislative action were discussed. Committee members joined in a discussion of local problems and experiences in the handling of disease conditions.

* * *

By JIM THOMSON
Ass't Editor, IAA RECORD

HE hated to give up his fine herd of Holsteins. But the IAA director from the 15th district felt that 25 years was long enough to milk cows. It was time to take life a little easier. Besides, his son Jack, 20, was cool to the idea of being a dairy farmer. He would rather raise hogs and fatten cattle.

So early this past winter Ed Gumm sold his dairy herd. Then he resigned as president of the Illinois Milk Producers' Association, the strong, statewide, farmer-controlled producers' bargaining organization.

But Ed hasn't given up the job of working for better living conditions on the farm. Not as long as he is a member of the board of directors of the Illinois Agricultural Association. On the board since November, 1946, he represents the counties of Henry, Knox, Fulton, Schuyler, and Adams.

The 753-acre Gumm farm lies on a flat, fertile plain three miles south of Galesburg in Knox county. It was here that Director Erwin Gumm was born and reared, on a farm that has been in the family 75 years.

He attended rural school and graduated from Galesburg high school. Later he finished a commercial course at Brown's Business College in Galesburg. He took up the study of law at John B. Stetson University at DeLand, Fla., but left a year later to join the army during World War I.

After nine months service in France he returned home and went into the dairy business. In 1923 he was married to Janet Chapman of Knox county. The Gumms have two children. Son Jack was discharged from army service several months ago and has decided to make a career of farming. Daughter Dorothy, 21, was graduated in home economics from MacMurray College in Jacksonville in January. She is now employed in "The Coffee Shop" at the University of Illinois in Urbana.

Ed is pleased with his son's decision to stay on the farm. He feels pretty strong about the need for well-trained, intelligent, young people on Illinois farms. "Agriculture needs these young people," he says. "Farm Bureau is just what we make it; and an enlightened, intelligent crop of young farmers under the banner of Farm Bureau can help to assure agriculture of a bright future."

Gumm hasn't been exclusively a dairy farmer. In typical past years he marketed about 100 hogs and fed about 100 beef cattle. Last fall he had 75 head of stock cows, 70 calves, and 23 yearlings. The dairy herd averaged 50 head. Thirty to 40 were milked daily.

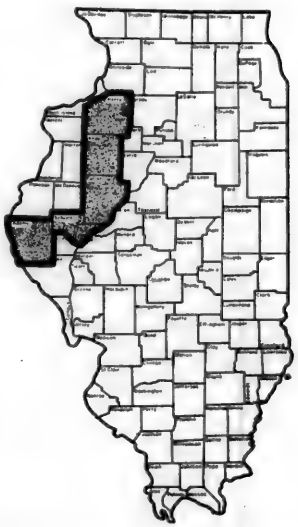
Cropping on the Gumm place averages about 100 acres in corn, 75 in soybeans, 100 in oats, 35-40 in alfalfa, 50 in clover, and 25 in wheat, about 320 acres are in permanent pasture.

Rotation follows this general plan: corn, corn, oats or soybeans, alfalfa or clover. Wheat has been grown for bedding and two years ago averaged 52 bushels to the acre.

The entire farm has been limed, and a continuing plant food program calls for the application of phosphate to 40 acres of the land each year.

Ed Gumm joined the Knox County Farm Bureau when he went into farming. In 1929 he became a director. For the past four years he served as vice president. A leader in milk producer circles in his home area, he helped organize the Galesburg Pure Milk Association 14 years ago. He served as the organization's first and only president until last year.

Besides being president of the Illinois Milk Producer's Association for the past two years, Gumm has served on its board since its organization in 1933. He has been president of the Knox-Warren



Shaded area on map is 15th district represented on the Illinois Agricultural Association board of directors by Edwin Gumm of Galesburg in Knox county.

With son Jack, 20, IAA Director Edwin Gumm tends to the milking. He has since given up dairying.

This is the 13th in a series of articles to further acquaint you with the men who represent you on the Illinois Agricultural Association board of directors.

Using an adding machine to tabulate figures for his bookkeeping. Mrs. Gumm looks on.

Livestock Association for eight years.

The IAA director has been county supervisor for Galesburg township for the past 14 years, and is now chairman of the finance committee.

He has been a member of the Galesburg Exchange Club for the past 20 years, and has served on the board of directors several years and for four years as a moderator of the Galesburg Universalist church. He was an AAA committeeman four years. At present he is the farmer representative on the board of directors of the Galesburg Chamber of Commerce.

In civic and charitable work, Director Gumm has been active in Boy Scout, War Bond, and Red Cross drives. At present he is a director on the board of the Knox County Red Cross.

Gumm believes that farmers must have Farm Bureau if only to sustain their economic position with other well-organized associations of labor and industry.

"Young farmers," he said, "are fortunate in coming upon an organization like Farm Bureau. Because of it, the young farmer is assured a better standard of living on the farm, and because of what Farm Bureau has done Farm Bureau itself will benefit from the high caliber men who will stay on the farms. These men will take an increasing part in Farm Bureau affairs and so make agriculture a finer occupation and a finer way of life than it ever has been in the past."

Director Gumm (on wagon) puts up silage with his men, (left to right), Orville Chaney, Arthur Matteson, and Glen Westerfield.

NOTICE

ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meeting of the Boone County Farm Bureau to be held during the month of March, 1948, at the hour and place to be determined by the Board of Directors of such County Farm Bureau, the members in good standing of the Boone County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

Paul E. Mathias, Secretary
February 17, 1948

Launch New Wool Marketing Plan This Month

A NEW and improved marketing program for Illinois Wool growers is being launched this month. For the first time in its history of operation, Illinois Wool Marketing Association will assemble and grade members' wool in the association's own warehouse. The wool cooperative is an associated company of the Illinois Agricultural Association.

To the grower the new setup will mean speedier payment and a greater share of the sale dollar through lower handling cost.

Farm Bureau members who market their wool through the Illinois Wool Marketing Association also may secure free bags and paper twine for their fleeces through inquiry at their county Farm Bureau.

As in past years, wool will be assembled in county pools and then shipped to the association's warehouse at Paris in Edgar county. The grower may also ship his wool direct to the warehouse. The warehouse is located on the Pennsylvania railroad and the association has it leased with option to buy. The building is 370 feet long and 50 feet wide.

The wool will be sold, as in former years, through the National Wool Marketing Corporation, a cooperative in Boston. But under the new plan it will not be necessary to ship the wool to Boston for grading and then reship it to the woolen mill.

(*Continued on page* 26)

This is the Illinois Wool Marketing Association warehouse at Paris, Edgar county, where cooperators' wool shipments will be assembled and graded, starting after March 15. Left to right on the platform are Otto Rouse, secretary, Vermilion County Farm Bureau, Dale Rouse, Illinois Wool manager, and Art Risser, former warehouse owner.

'Keep Young People On Farms' - Gumm

Ed is pleased with his son's decision to stay on the farm. He feels pretty strong about the need for well-trained, intelligent, young people on Illinois farms. "Agriculture needs these young people," he says. "Farm Bureau is just what we make it; and an enlightened, intelligent crop of young farmers under the banner of Farm Bureau can help to assure agriculture of a bright future."

Gumm hasn't been exclusively a dairy farmer. In typical past years he marketed about 100 hogs and fed about 100 beef cattle. Last fall he had 75 head of stock cows, 70 calves, and 23 yearlings. The dairy herd averaged 50 head. Thirty to 40 were milked daily.

Cropping on the Gumm place averages about 100 acres in corn, 75 in soybeans, 100 in oats, 35-40 in alfalfa, 50 in clover, and 25 in wheat, about 320 acres are in permanent pasture.

Rotation follows this general plan: corn, corn, oats or soybeans, alfalfa or clover. Wheat has been grown for bedding and two years ago averaged 52 bushels to the acre.

The entire farm has been limed, and a continuing plant food program calls for the application of phosphate to 40 acres of the land each year.

Ed Gumm joined the Knox County Farm Bureau when he went into farming. In 1929 he became a director. For the past four years he served as vice president. A leader in milk producer circles in his home area, he helped organize the Galesburg Pure Milk Association 14 years ago. He served as the organization's first and only president until last year.

Besides being president of the Illinois Milk Producer's Association for the past two years, Gumm has served on its board since its organization in 1933. He has been president of the Knox-Warren

Shaded area on map is 15th district represented on the Illinois Agricultural Association board of directors by Edwin Gumm of Galesburg in Knox county.

With son Jack, 20, IAA Director Edwin Gumm tends to the milking. He has since given up dairying.

This is the 13th in a series of articles to further acquaint you with the men who represent you on the Illinois Agricultural Association board of directors.

Using an adding machine to tabulate figures for his bookkeeping. Mrs. Gumm looks on.

Livestock Association for eight years.

The IAA director has been county supervisor for Galesburg township for the past 14 years, and is now chairman of the finance committee.

He has been a member of the Galesburg Exchange Club for the past 20 years, and has served on the board of directors several years and for four years as a moderator of the Galesburg Universalist church. He was an AAA committeeman four years. At present he is the farmer representative on the board of directors of the Galesburg Chamber of Commerce.

In civic and charitable work, Director Gumm has been active in Boy Scout, War Bond, and Red Cross drives. At present he is a director on the board of the Knox County Red Cross.

Gumm believes that farmers must have Farm Bureau if only to sustain their economic position with other well-organized associations of labor and industry.

"Young farmers," he said, "are fortunate in coming upon an organization like Farm Bureau. Because of it, the young farmer is assured a better standard of living on the farm, and because of what Farm Bureau has done Farm Bureau itself will benefit from the high caliber men who will stay on the farms. These men will take an increasing part in Farm Bureau affairs and so make agriculture a finer occupation and a finer way of life than it ever has been in the past."

Director Gumm (on wagon) puts up silage with his men, (left to right), Orville Chaney, Arthur Matteson, and Glen Westerfield.

NOTICE

ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meeting of the Boone County Farm Bureau, to be held during the month of March, 1948, at the hour and place to be determined by the Board of Directors of such County Farm Bureau the members in good standing of the Boone County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

Paul E. Mathias, Secretary
February 17, 1948

Launch New Wool Marketing Plan This Month

A NEW and improved marketing program for Illinois Wool growers is being launched this month. For the first time in its history of operation, Illinois Wool Marketing Association will assemble and grade members' wool in the association's own warehouse. The wool cooperative is an associated company of the Illinois Agricultural Association.

To the grower the new setup will mean speedier payment and a greater share of the sale dollar through lower handling cost.

Farm Bureau members who market their wool through the Illinois Wool Marketing Association also may secure free bags and paper twine for their fleeces through inquiry at their county Farm Bureau.

As in past years, wool will be assembled in county pools and then shipped to the association's warehouse at Paris in Edgar county. The grower may also ship his wool direct to the warehouse. The warehouse is located on the Pennsylvania railroad and the association has it leased with option to buy. The building is 370 feet long and 50 feet wide.

The wool will be sold, as in former years, through the National Wool Marketing Corporation, a cooperative in Boston. But under the new plan it will not be necessary to ship the wool to Boston for grading and then reship it to the woolen mill.

(Continued on page 26)

This is the Illinois Wool Marketing Association warehouse at Paris, Edgar county, where cooperators' wool shipments will be assembled and graded, starting after March 15. Left to right on the platform are Otto Rouse, secretary, Vermilion County Farm Bureau, Dale Rouse, Illinois Wool manager, and Art Risser, former warehouse owner.

Clean sows and clean ground plus good management equals profitable pork production.

* * *

As I indicated a moment ago, cold and the chilling of baby pigs has a big influence on their chances to live through the first few days of their lives. The Extension Service of the University of Illinois attributes 41 per cent of the baby pig deaths last year to chilling. Of course, we can't influence the weatherman, but we can improve the protection we can give these sows and their litters. By having sheds in good conditions and weather-proofed, by insulating them with straw, by using straw lofts or anything that will keep these baby pigs warmer and prevent them from getting chilled is a good practice.

Pig brooders, by that I mean a light bulb in one corner of the pen with a hover around it, has saved one pig per litter on an average under many trials Central heating of farrowing houses has the wide approval of those using it. Some of this equipment may seem expensive and impractical, but in the long run will pay for itself by the pigs it will save.

By DR. DON VAN HOUWELING

IAA Veterinary Medical Relations Department Director

THE baby pig "blitz" of the 1947 farrowing season confronted farmers with an old problem in a new form. Nearly 100 per cent of the spring pigs died in several cases. Attention this spring is now focused upon the problem of raising more baby pigs. Statistics show that 40 per cent of the pigs farrowed are never weaned. That figure is not for 1947 alone, but is an average for the past several years.

During the farrowing season last year the temperature was below average. In fact, March of '47 was the coldest since 1932. Besides low temperatures, rain, snow, and sleet contributed to unfavorable farrowing conditions. This weather condition was one big cause for the heavy baby pig losses of last spring.

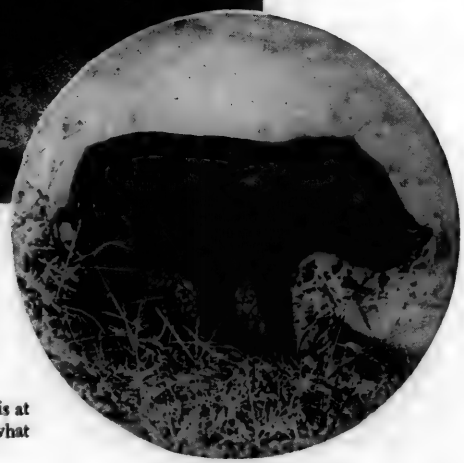
Economic conditions during the fall and winter of 1946 no doubt added to the troublesome '47 farrowing season. Fluctuation hog markets, due to the removal of ceilings, scarcity and high cost of good supplements and proteins no doubt contributed to the poorly-conditioned sows reported from many localities. It would seem that all forces combined in 1947 to deal the new-born pig a knock-out blow.

I never prophesy what might happen, but if I did, I would say that there probably will be less trouble this spring than last. Why? We cannot control weather conditions, feeds are higher than a year ago and diseases are always prevalent. So why am I optimistic? The trouble encountered last spring made everyone keenly aware of the necessity of having good breeding stock properly nourished, and suitably housed for successful pig raising. Sure, a lot of baby pigs are going to die again this spring. In some cases entire herds may die, but I have faith in the farmers and their willingness to apply what they know to better advantage this spring, and consequently raise many more pigs.

Those of you who read this article and have sows that will farrow are not going to be able to change such things as the selection of your breeding gilts or the boar now. Nor is there any use for me to tell you what you should feed these gilts before they are bred and during the first few weeks of their gestation period. In other words, the farrowing season is at hand and you want to know what you can do now!

Filthy hog lots (left) make successful hog-raising almost impossible. Undernourished, diseased pigs like the one below have a bleak future.

(*Farm Quarterly Photos*)



Futher evidence to prove that chilling of baby pigs is important was demonstrated by the U. of I. in this way. Baby pigs that were fasted from birth went into a coma as a result of the low blood sugar level about three times as quickly at 55 to 65-degree temperatures as they did at 85 to 90 degrees. The significance of this is that when a sow is not furnishing sufficient food right after farrowing the baby pigs can survive longer if they are kept warm. When they are kept warm you have two or three days to get the sow back to normal before the pigs are too far gone to recover.

Guard rails and slanting floors in farrowing pens will save pigs from being crushed by sows. Individual houses can be set on a hillside to get a slanting floor in the shed.

The ration that your sows get during the rest of their gestation period and just following farrowing is extremely important. They should have an adequate supply of a good supplement containing enough protein and vitamins. These vitamins can come from the feed or may be supplied in a concentrated form from supplements. Supplements, free access to mineral, and a mixture of farm grains with about 15 per cent alfalfa meal is a good ration. Corn alone may be satisfactory, but the addition of part oats is usually a good practice. Exercise during these last weeks of the gestation period seems to be important.

A sudden change in the diet of the sow just before farrowing is not good practice. Often times this will cause her to go off feed and effect the milk supply after farrowing. However, a slightly more laxative diet just before farrowing is usually good. This can easily be done by adding a handful of linseed oil meal or bran to the ration twice a day. It is not a good practice to overfeed the sow just before or after farrowing. If anything the corn and protein should probably be decreased at this critical time.

Proper sanitation of the sow and her farrowing pen is important. Most of you are aware of the need for sanitation, but often neglect this vital step. Clean sows farrowing in clean sheds is fundamental. Of course, after the pigs are farrowed and travel from the farrowing pen it is extremely important to have them run on clean ground. Every effort should be made to have the pigs and the sows on clean ground at farrowing time or just as soon as possible after farrowing.

Doom Illinois Flies To Destruction

(*Continued from page* 10)

time also efforts will be made on a large scale to build up interest and have equipment fully lined up for the push-off or control week during the first week in June.

Throughout the month of June efforts will be centered on further intensive spraying and the complete elimination, if possible, of all flies missed during the first week in June.

Metzger emphasized that the success of the program will depend too on a widespread follow-up drive to hold all gains. This will require sprayings at regular intervals throughout the summer and into the fall.

By October leaders are expected to be able to appraise the results of the campaign to rid the state of flies. Farmers, in particular, will be interested in the results of the drive. They stand to gain much from its success.

The spring conference of Farm Bureau leaders will be held in Springfield on Thursday, April 1, beginning at 12 o'clock noon.

The Illinois Farm Supply tug Wabash lies with its stern under water after ice tore a hole in it on the Illinois river between Beardstown and Browning Jan. 26. It was run up on shore as it began to sink. Loss was covered by marine insurance. The tug was raised and floated to St. Louis for overhauling and cleaning.

LETTERS TO THE EDITOR

COMPLIMENT

I THOROUGHLY enjoyed the homemaking pages in the last issue of the IAA RECORD. The article, "State Leads in Oleo Production," was an interesting item especially with the margarine question now being discussed by Congress as to tax, coloring, etc.

Mrs. Dean H. Smith
DuPage County

RURAL YOUTH APPRECIATION

BELOW are some expressions of appreciation for the recent Rural Youth short course held in Chicago under the sponsorship of the Illinois Agricultural Association.

I wish to express my sincere appreciation for having the opportunity of attending your short course for Rural Youth in Chicago. It was a meeting which gave food for the mind as well as the body.

We, the youth of today, will have the job of running the world of tomorrow. It is through educational programs such as you have presented to us that we will understand our responsibilities. The better we are informed the greater service we will be able to render. The short course has gone far to achieve this goal and now may we Rural Youthers, with your helping hand, attain ever greater accomplishments.

Wayne Elliott
La Salle County

EARL SORRELLS and I reported our experience at the short course to the regular meeting of the Montgomery County Rural Youth group on Jan. 13, 1948. The events in Chicago were a source of information and pleasure to all of us.

T. G. Stevenin
Youth Assistant
Montgomery County

I WANT to take this opportunity to thank the Young People's Activities department of the IAA for a swell time while I was your guest.

The program and entertainment you had planned was "tops" as far as I was concerned. The only drawback was it didn't last long enough, but it sure was two days well spent, and a very educational meeting.

Charles Newkirk
Wabash County

I ENJOYED the Rural Youth short course very much and wish to thank you from the bottom of my heart for the educational and social time I had.

Lyle Ross
Sangamon County

JUST a note to tell you how much I enjoyed myself in Chicago. I certainly could never have spent any two days more worthwhile than those two days I spent at the IAA short course. I didn't realize the size of the Illinois Agricultural Association. I wish to express my gratitude to you for your accommodations and also for making it possible for us to attend this course.

Earl Sorrells
Montgomery County

CONVENTION NUMBER

I WISH to compliment you on the January issue of the IAA RECORD. Your report on the IAA convention in St. Louis received many favorable comments from farmers here. We especially appreciate the publicity in regard to our Southern Illinois 4-H Club camp and feel that the RECORD can be quite helpful in the camp promotion program.

W. C. Anderson
Farm Adviser
Jackson County

SEEDLINGS AVAILABLE

THE Illinois Soil Survey data confirm our opinion that farm woodland tree crops are the highest economic land use for three million nontimbered farm acres, or one-tenth of the state's total land area. In past seasons Illinois farmers have planted up to three million state-grown trees annually.

In these times of scarce, expensive fence posts, poles, and farm building materials, a keener interest generally is being taken by farmers in growing their own needs. It's good water and soil conservation, too.

We would like your readers to know that Illinois farmers can get tree seedlings next spring for practical farm woodlands of their own, or for other reforestation, wildlife and soil conservation purposes, if they order now. Use of stock for windbreaks, ornamentals or landscaping is not permissible.

Standard order blanks can be obtained from farm adviser offices, Soil Conservation Service offices, district foresters, or from the State Forester in Springfield.

The following species are still obtainable at a nominal cost from the State Forester's office, in orders of 500 or more trees: ash, black walnut nuts, sycamore, black locust, osage orange, soft maple, cypress, loblolly pine, shortleaf pine, pitch pine, and virginia pine.

J. Donovan Larsen
Staff Forester
Division of Forestry
Springfield, Ill.

The American Farm Bureau Federation presents its long-range program on agriculture before the Senate committee on agriculture in Washington. Arrow points to IAA President Charles B. Shuman. At far right leaning on table is AFBF President Allan B. Kline. Man in light suit leaning on table is Sen. Scott Lucas of Illinois.

RURAL YOUTH

Study Brucellosis Control

By ELLSWORTH D. LYON, Director
IAA Dept. Young Peoples Activities

THE annual Rural Youth district meetings have just closed with a total attendance of 650 in the 12 districts. Seventy-five counties sent representatives.

Unusual from the standpoint of educational material, but nevertheless, of vital interest and value, was the subject "Battling Brucellosis" (Bang's disease). This study was set up under the guidance of Dr. C. D. Van Houweling of the IAA department of Veterinary Medical Relations.

Recreation leadership was another of the two main emphases of the series. E. H. Regnier of the department of rural sociology extension of the College of Agriculture of the University of Illinois. and his assistants Mrs. Betty Perkins and Harriett Ellicott, taught three national folk dances of America, Denmark and Spain.

Brucellosis is of interest at this time because of its increase among swine and cattle and a resulting increase among humans in the form of undulant fever.

Veterinarians point to the economic loss from the prevalence of brucellosis in swine and dairy herds where abortions occur and milk production is reduced because of its prevalence. They say about 20 per cent of the dairy herds are affected and that about 5 per cent of dairy cows are reactors to tests. The estimated annual financial loss to farmers in Illinois alone is $5,000,000. On the other hand, experiments in Indiana prove that when reactors are removed from the dairy herd and replaced by healthy cows there is an increase of 30 per cent in milk production.

Frank Mealiff, youth assistant Logan county, led the discussion on "Battling Brucellosis" at Lincoln College, Lincoln, following the talk by Dr. L. J. Miller local veterinarian. To his left are Dick Stone, president Mason Rural Youth and Harold Conrady, Logan president.

The veterinarians presented three plans of control which are recommended for dairy cattle by the Division of Livestock Industry of the Illinois Department of Agriculture, as follows:

"Plan A is recommended for clean herds and herds with only moderate infection. Under this plan all animals more than four months old must be tested periodically. All reactors must be removed from the herd within 15 days after the test. Additions to the herd must come from accredited herds or be tested. Vaccination of calves four to eight months old is optional. Adult vaccination is prohibited.

"Plan B is recommended for herds showing heavy infection. All animals must be tested initially. Vaccination of calves four to eight months old is required. Adult vaccination is permissible at herd owner's expense. Under this plan reactors may be kept in the herd or sold into infected herds on permit by the State Department of Agriculture. Reactors sold for slaughter must be reported to the Department of Agriculture. No indemnity is paid for them.

"Plan C is recommended for herds whose owners wish to have calfhood vaccination without a herd test. No tests are required. No indemnities are paid. All calves must be vaccinated between four and eight months of age. Adult vaccination is permissible at herd owner's expense."

Among the doctors of veterinary medicine who presented the problem of brucellosis for discussion were local practitioners, state and federal veterinarians. They were: Dr. W. G. Raudabaugh, Gibson City; Dr. L. J. Miller, Lincoln; Dr. R. E. Reppert, Cambridge; Dr. Roy B. Price, Monmouth; Dr. George Shindel, Charleston; D,' A. J. Coale, Carmi; Dr. C. R. Dean, Nashville; Dr. E. E. Moon, Pittsfield; Dr. E. H. Stratmeyer, Hillsboro; Dr. H. P. Wessels, St. Charles; and Dr. Van Houweling. Their talks along with their direction of group and open forum discussions and the showing of the movie entitled "Battling Brucellosis" made a thorough presentation of the knowledge of and control of this number one animal-man disease.

Illinois Farm Supply Company Closes Deal For Pana Refinery

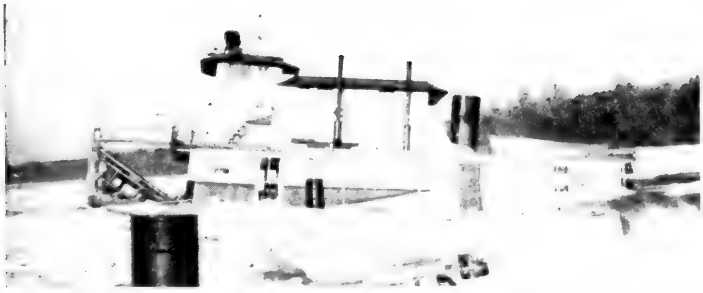
THE Pana Refining Company at Pana, Illinois, has been bought by the Illinois Farm Supply Company. The Illinois Farm Supply Company is an affiliate of the Illinois Agricultural Association.

C. H. Becker, general manager, said that all of the outstanding capital stock of the Pana Refining Company has been purchased by the Illinois Farm Supply Company. Operation of the refinery under its present name will continue for an indefinite period.

The present operating personnel of the company will be retained with E. G. Youngberg as general manager of the refinery. Three of the executive officers, Sam D. Jarvis, C. Hayden Davis, and Ray Hose, have agreed to remain for a period in an advisory capacity.

The purchase of the Pana Refining Company, according to Becker, represents a step forward by the Illinois Farm Supply Company to improve its supply position. "This is part of an all-out effort to provide Farm Bureau members of Illinois with the essential fuels needed for farming," Becker said. The acquisition of this property will serve to alleviate the supply problem to a certain extent but will not be the complete solution, according to Becker.

The Illinois Farm Supply Company is the state purchasing and supplying organization for 104 member companies located in every county of the state. These Farm Bureau-type cooperatives own all the capital stock of the Illinois Farm Supply Company. This company's primary function is to serve its members with their needs for petroleum, feed, plant food and other related farm supplies.



The Illinois Farm Supply tug Wabash lies with its stern under water after ice tore a hole in it on the Illinois river between Beardstown and Browning Jan. 26. It was run up on shore as it began to sink. Loss was covered by marine insurance. The tug was raised and floated to St. Louis for overhauling and cleaning.

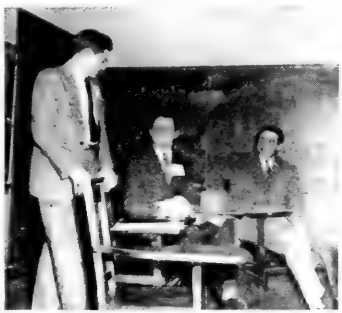
Regnier of the department of rural sociology extension of the College of Agriculture of the University of Illinois, and his assistants Mrs. Betty Perkins and Harriett Ellicott, taught three national folk dances of America, Denmark and Spain.

Brucellosis is of interest at this time because of its increase among swine and cattle and a resulting increase among humans in the form of undulant fever.

Veterinarians point to the economic loss from the prevalence of brucellosis in swine and dairy herds where abortions occur and milk production is reduced because of its prevalence. They say about 20 per cent of the dairy herds are affected and that about 5 per cent of dairy cows are reactors to tests. The estimated annual financial loss to farmers in Illinois alone is $5,000,000. On the other hand, experiments in Indiana prove that when reactors are removed from the dairy herd and replaced by healthy cows there is an increase of 30 per cent in milk production.



Frank Mealiff, youth assistant Logan county, led the discussion on "Battling Brucellosis" at Lincoln College, Lincoln, following the talk by Dr. L. J. Miller local veterinarian. To his left are Dick Stone, president Mason Rural Youth and Harold Conrady, Logan president.

The veterinarians presented three plans of control which are recommended for dairy cattle by the Division of Livestock Industry of the Illinois Department of Agriculture, as follows:

"Plan A is recommended for clean herds and herds with only moderate infection. Under this plan all animals more than four months old must be tested periodically. All reactors must be removed from the herd within 15 days after the test. Additions to the herd must come from accredited herds or be tested. Vaccination of calves four to eight months old is optional. Adult vaccination is prohibited.

"Plan B is recommended for herds showing heavy infection. All animals must be tested initially. Vaccination of calves four to eight months old is required. Adult vaccination is permissible at herd owner's expense. Under this plan reactors may be kept in the herd or sold into infected herds on permit by the State Department of Agriculture. Reactors sold for slaughter must be reported to the Department of Agriculture. No indemnity is paid for them.

"Plan C is recommended for herds whose owners wish to have calfhood vaccination without a herd test. No tests are required. No indemnities are paid. All calves must be vaccinated between four and eight months of age. Adult vaccination is permissible, at herd owner's expense."

Among the doctors of veterinary medicine who presented the problem of brucellosis for discussion were local practitioners, state and federal veterinarians. They were: Dr. W. G. Raudabaugh, Gibson City; Dr. L. J. Miller, Lincoln; Dr. R. E. Reppert, Cambridge; Dr. Roy B. Price, Monmouth; Dr. George Shindel, Charleston; D. A. I. Cole, Carmi; Dr. C. R. Dean, Nashville; Dr. E. E. Moon, Pittsfield; Dr. E. H. Stratmeyer, Hillsboro; Dr. H. P. Wesse, St. Charles; and Dr. Van Houweling. Their talks along with their discussion of group and open forum discussions and the showing of the movie entitled "Battling Brucellosis" made a thorough presentation of the knowledge of and control of this number one animal-man disease.

Illinois Farm Supply Company Closes Deal For Pana Refinery

THE Pana Refining Company at Pana, Illinois, has been bought by the Illinois Farm Supply Company. The Illinois Farm Supply Company is an affiliate of the Illinois Agricultural Association.

C. H. Becker, general manager, said that all of the outstanding capital stock of the Pana Refining Company has been purchased by the Illinois Farm Supply Company. Operation of the refinery under its present name will continue for an indefinite period.

The present operating personnel of the company will be retained with E. G. Youngberg as general manager of the refinery. Three of the executive officers, Sam D. Jarvis, C. Hayden Davis, and Ray Hose, have agreed to remain for a period in an advisory capacity.

The purchase of the Pana Refining Company, according to Becker, represents a step forward by the Illinois Farm Supply Company to improve its supply position. "This is part of an all-out effort to provide Farm Bureau members of Illinois with the essential fuels needed for farming," Becker said. The acquisition of this property will serve to alleviate the supply problem to a certain extent but will not be the complete solution, according to Becker.

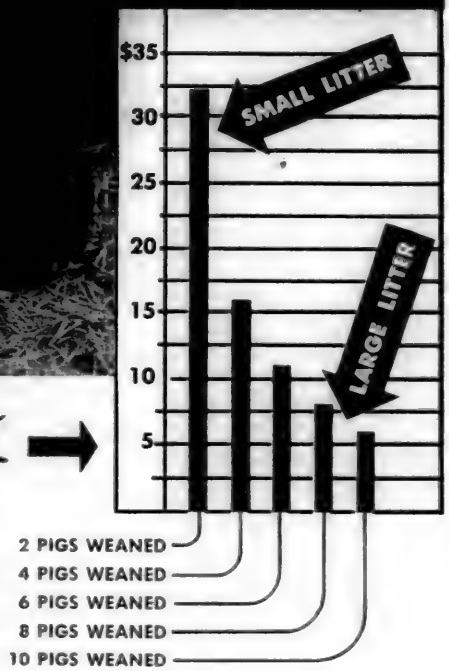
The Illinois Farm Supply Company is the state purchasing and supplying organization for 104 member companies located in every county of the state. These Farm Bureau-type cooperatives own all the capital stock of the Illinois Farm Supply Company. This company's primary function is to serve its members with their needs for petroleum, feed, plant food and other related farm supplies.

March is a month of bustling activity on every farm, and a month of many serious farm accidents. In March, many of you will start new hired hands, men unacquainted with the particular hazards of your farm — your buildings, your machinery, your animals. In March you will undertake one of your most hazardous jobs — repair of machinery and repair of buildings. March is the month that stock is turned into new fields — and fences sometimes do not hold. And it all adds up to one thing: DON'T START MARCH WITHOUT INSURANCE PROTECTION!

See your Country Mutual Casualty representative about a Farmers General and Employers Liability policy. It will cost you surprisingly little, and will give you protection against damage suits arising out of injuries sustained by people employed in your farming operations, or judgments secured against you by strangers injured on your farm.

COUNTRY MUTUAL CASUALTY COMPANY provides insurance protection tailor-made to your needs as a farmer. Visit our insurance representative at your Farm Bureau and let him explain how necessary liability protection is to your farming operation.

How Much is Each Pig Costing YOU?



Check your costs ➡

AN AVERAGE SOW requires approximately 1600 pounds of feed during gestation and lactation. This represents about a $65 feed bill with present feed prices. **Profits will depend on the number of pigs weaned per litter.**

BLUE SEAL PIG & SOW SUPPLEMENT

Diet of the sow during gestation and lactation is a big factor in the number of pigs that will be weaned.

BLUE SEAL PIG AND SOW SUPPLEMENT contains these important vitamins, minerals, and high quality proteins. BLUE SEAL PIG AND SOW SUPPLEMENT will help you wean large, healthy litters at a **low cost per pig.**

NEWS and VIEWS

FARM WOMEN ARE URGED TO WORK *for World Peace*

A POWERFUL plea for world peace keynoted the annual meeting of the Illinois Home Bureau Federation held last month during Farm and Home Week at the College of Agriculture in Champaign.

The message was delivered by Mrs. Raymond Sayre, a trim Iowa farm woman and mother of four children, who is president of the Associated Country Women of the World.

"Farmers and farm women must be prepared to make sacrifices to insure the peace for our children," Mrs. Sayre said. "This means sending fertilizer and farm machinery to Europe. It means lowering tariff walls where it hurts — on farm commodities.

"To insure peace we must increase our knowledge of the world beyond our borders," she said. "We must learn that we can not longer ignore the effect on peace of people in want and hunger."

She urged women to take a part in politics. "In politics lies the peace of the world," she said. She also felt we are too impatient with the United Nations. "It is still functioning," she reminded her audience, "and Russia is still a part of it."

During the business session Miss Myra Robinson, Kansas, Edgar county, was elected president of the Federation. She succeeds Miss Pearl Barnes, Preemption, Mercer county.

Miss Robinson was graduated from the University of Illinois in chemistry and worked for various home appliance manufacturers in Ohio before going to Cornell University, Ithaca, N. Y., as assistant professor of home economics.

For the past 15 years she has lived on the 340-acre family homestead operated by a brother. She has been in Home Bureau work for about 10 years and has served as a county Home Bureau chairman and treasurer for the state organization.

During the business meeting members heard reports from all standing committees. Mrs. Dale Huffman from Chandlersville, Mason county, state organization director, reported that membership now stands at 41,759, highest in the organization's history.

She said that six counties have already exceeded this year's quota of a 20 per cent increase in membership. They are: Effingham, Perry, Wayne, Jo Daviess, Schuyler, and Brown.

The resolutions passed by the Home Bureau expressed appreciation for the favorable attitude that exists between that group and the Extension Service, and thanked the Illinois Agricultural Association for its counsel and cooperation.

The rural women pledged their support to the larger organizations of which they are a part, the Associated Women of the American Farm Bureau Federation, the National Home Demonstration Council, and the Associated Country Women of the World.

Deploring the spread of juvenile delinquency in rural areas and the wide

PATCHWORK QUILT

spread laxity that tempts youth, the Home Bureau asked that every county increase its activities for youth by promoting 4-H and Rural Youth groups.

They stressed the responsibilities that rural women have to see that the children of their community receive adequate education under capable, well-trained, well-paid teachers.

The resolutions asked for an adequate well-equipped home economics building at the University of Illinois. The resolutions stated that the home economics department has been neglected to make way for courses of far less importance.

Cancer control and infantile paralysis aid were cited as specific health projects deserving consideration.

Other resolutions were as follows:

"We call attention of Federation members to the many old, inadequate, inconvenient, poorly constructed rural houses, lacking warmth and sanitary facilities. For this need we should like to enlist both private and public interest. We submit that the improvement of rural housing is important to conserve the farm family.

"To help women understand their part in the soil conservation program, particularly its relation to human nutrition, we believe joint meetings with the Farm Bureau to consider the subject, the inclusion of information in the Home Bureau program, and the attendance of women at soil conservation demonstrations would be helpful.

"We favor European relief plans, convinced that for world harmony the sending of needed food is much better than the sending of armed forces.

"We urge the extension of Home Bureau service to more and more women through an intensive membership program. We further strongly recommend that in every unit and in every county the emphasis be given to educational matters such as those indicated in these resolutions."

TUBULAR WOOL BLOUSE

Here's a windfall for the business girl with few spare moments. Tubular wool jersey is back again but in a new variation — as a blouse. It's even more than that for it's really an overblouse to be worn over your skirts and slacks and pulled in at the waist, by a wide belt. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

Monroe Has Fun At Family Night

Monroe County Home Bureau held its annual "Family Night" in January. About 150 people attended the function which began with a potluck supper. The evening was spent in doing folk dances, etc., with Miss Harriett Ellicott, recreation specialist of the University of Illinois in charge . . . Mrs. Milton Nottmeier, publicity chairman.

The new delinescope recently purchased by the Kane County Home Bureau for illustrating lessons has been received with much enthusiasm.

More than 100 members and guests were present recently at a tea party sponsored by the Grace Bliss Home Bureau unit at the GAR Hall in Aurora. Mrs. Charlotte Herrin, home adviser, president.

CROCHETED AFGHAN

Crocheted afghans are indispensable in a home because they can be used in so many different ways. This particular style is easy to make for the motifs or squares are all done separately and then sewed or crocheted together. Even if you only make one square a sitting you'll be surprised at how quickly you can finish your treasure. DO YOU NEED NITRATES?

Then

GROW YOUR OWN WITH BLUE SEAL INOCULANT

Farmers all over Illinois are searching for commercial nitrogen fertilizers that are not available. Nitrogen is the most limiting factor in crop production. The air above your farm contains nitrogen in abundance. If properly inoculated, your legumes will take free nitrogen from the air and make it available for crops. Blue Seal Inoculants will aid you in building your own nitrogen factory on your farm. Take the guess out of inoculation! Buy Blue Seal and be sure!

Buy Now and SAVE!

1 Save the Soil Replace soil nitrogen cheaply by the use of Blue Seal Inoculants.

2 Save the Discount The quicker you buy, the more you save!

LAUNCH NEW WOOL MARKETING PROGRAM

(Continued from page 17)

Each producer selling through the cooperative facilities of Illinois Wool will have his wool graded individually. It also will get three weighings. It will be weighed when it comes in and again just before it goes to the grading table, and then it will be reweighed as it comes off the grading table in individual grades.

Speedier payment is one of the major benefits expected from the new marketing plan. Manager Rouse says it is expected that a partial payment will be advanced to the grower when the wool arrives at the association's warehouse, and a second payment covering the full value of the wool will be made after the wool has been graded, appraised and final settlement received from the National Wool Marketing Association.

Amount of advance payments on wool are announced each year by the National at Boston and this figure was not available at press time. Last year the advance was 35 cents a pound on clean medium wool.

It is plain to see that the wool grower will get full market price for his wool by marketing through the cooperative plan. He gets accurate weights and he gets paid according to the individual grade of his wool.

The government through the Commodity Credit Corporation also is pledged to support the average wool price for the country at the 1946 price level. This CCC program applies only to wool that moves through a handler approved by the CCC such as the Illinois Wool or National Wool.

As an additional service to wool growers, Illinois Wool in cooperation with the University of Illinois Extension Service and a clipper manufacturer, is sponsoring three shearing schools.

They will be held as follows: March 15-16, Roseville, south of Monmouth; March 17-18, U. of I. College of Agriculture, Urbana, and March 19-20, U. of I. Experiment Station, Dixon Springs.

HONOR 4-H LEADERS

Volunteer 4-H Club leaders were honored at the second annual Illinois 4-H Club leaders' meeting held recently at Springfield. The meeting was sponsored by the Extension Service of the University of Illinois, the Illinois Home Bureau Federation, the Illinois Agricultural Association and the Illinois Chain Store Council.

The QUALM ..BEFORE THE STORM

All of us have this feeling, we who are going along without insurance coverage, that someday we will get caught. And every year, many of us do. Wherever the giant, WIND, walks, you'll find us, men whose buildings have been crushed like a match box. We walk among the twisted trees, we look at our shapeless, windowless home, at our scattered property . . . . and we know how foolish it is to gamble.

Yes, neighbors are always good. They'll pitch in and clear up the debris. They'll do more than anyone would expect, and yet the loss is always heavy. And so often, we are the least able to sustain a heavy loss. So, if you are one of us uneasy gamblers — if you worry each time a storm gathers, don't take further chances. Get that wind insurance coverage now.

COUNTRY *Mutual* **FIRE** *Company*

BOY M… F!

A boy with property of his own, is a boy who is learning a lot of important things — responsibility, how money is made or lost, the risk of ownership and investment, the profits of honest effort. He is getting a miniature picture of his later life as a farmer — and the lessons he can learn will stay with him.

Farm Bureau encourages participation in 4-H Club, Rural Youth and all other activities which encourage farm children to carry out a project of their own. Such a project, whether it is a calf, a litter of pigs, or a crop of corn, can convince a young man that farming can profitably utilize all the skill and learning he can develop in his lifetime, and that no business on earth is more exciting or colorful.

ASSURE THEIR EDUCATION

Country Life
INSURANCE COMPANY

In tomorrow's race for the better jobs, for happier, fuller living, your sons and daughters will need all the skill and training you can afford to give them. Don't send them into life **unequipped!** You **need** not. For today, just a few dollars per year invested in a Country Life "Educational" policy will assure a child of a full education. And the sooner you take out your policies, the less they will cost. So see your friendly Country Life Insurance representative today, and let him work out an "educational" insurance program for your youngsters. It's never too early to start.

WHEN YOU STEP OUT — LIFE INSURANCE STEPS IN

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

"...TO SEE OURSELVES AS OTHERS SEE US"

By President Charles B. Shuman

SPRINGTIME brings to the farms of Illinois a mixture of rain and mud and beauty. Twenty-five years ago, as a high school student, I remember the spring months with their sea of mud and ruts through which our horse and buggy plowed each day. My memory of April, a few years later, is a vision of feeding twenty-five cent corn to $3 hogs in a muddy feed lot.

Too often we who live so close to nature fail to see and appreciate the beauty which comes with the rain and mud. As the "green" returns again this spring, it might be well for us to look carefully at our nearby landscape.

Recently as I rode the Panama Limited through some of the best farm land in our state, I overheard a fellow passenger comment that while Illinois had good farm land, it certainly must have many poor farmers.

He reasoned that only a poor farmer would be willing to live in such unattractive surroundings. Anger and resentment were my first reactions. Then I looked critically at the farm homes as they flashed by. Some were well kept and beautiful — but too many gave the general impression of a small scale junk yard.

Every farm home and its surrounding grounds may, with a little effort and very small expense, be made into a place of beauty. Native plants properly placed, a little planning of fences, a few gallons of paint and a thorough clean-up job on every farm would give nature a chance to convert rural Illinois into a place of beauty.

Every year thousands of people travel far and wide to view widely publicized beauty spots. Too often they return home to their own drab surroundings and never see the possibilities for improvement. We are creatures of habit and most of us become so accustomed to our home surroundings that we do not even see the need for change.

I would like to suggest that every farm family in Illinois stop their car on the road as they approach their home place some day soon, and discuss ways in which it can be made more attractive. We should have the most beautiful farm home grounds in the nation. We have some of the richest land, many of the best farmers and a great group of wonderful young people who may choose to live on these more attractive farms.

Livestock Co-ops HAVE RECORD YEAR!

ILLINOIS' two great metropolitan cooperative livestock marketing outlets at Chicago and St. Louis both reported the greatest dollar volume of business in their 26-year histories in 1947.

At their annual meetings last month, the Chicago Producers Commission Association reported handling 14,821 carloads of livestock valued at $70,797,304 and the Producers Livestock Marketing Association of St. Louis reported handling 17,415 carloads valued at $68,381,406.

The St. Louis cooperative announced that $52,500 would be refunded to its members from the sale of their livestock in 1947. The Chicago Producers announced savings for the year of $40,323.40.

The St. Louis meeting voted to change the name of the organization from the Producers Livestock Commission Association to the Producers Livestock Marketing Association.

Manager H. D. Wright said the St. Louis association received the two largest shipments during the year from the Illinois counties of Pike and Montgomery to lead the tri-state area. Pike shipped 639 cars and Montgomery, 511.

Manager D. L. Swanson of the Chicago Association reported that 1947 receipts came from 27 states. Illinois led with 11,758 of the 14,821 cars received. Swanson's figures showed that the Chicago Producers handled more livestock than the next three high commission firms combined.

Swanson asked for continuance of the fine support given the Chicago Producers during 1947. In doing so, he said, you will benefit not only your neighbors, but yourself as well, and you will get a great deal of personal satisfaction from such efforts. Swanson said more support would be needed to sustain volume in 1948 because "at the start of the year we had the smallest number of cattle on feed in eight years, and the smallest number of sheep and lambs in 20 years."

Principal speaker at the St. Louis meeting was J. S. Russell, farm editor of the Des Moines Register and Tribune who spoke on the recent trip he made to Europe with a group of Iowa farmers. Russell said some European countries could use better cattle strains. He reported, however, that he saw some of the finest herds of Ayrshires and Shorthorns in Scotland that he had ever seen.

Russell said he believed lack of fertilizer, seeds, machinery, and incentives would make for shortage of food in Europe for some time although he said there would be a marked improvement in the supply in 1948.

An Illinois corn and hog farmer, Roy Burrus, Arenzville, is president of the St. Louis co-op. Arthur Weber of Sparta was reelected to the board of direcors.

Speaking on "What's Ahead for Agriculture," at the Chicago Producers meeting, John H. Davis, executive secretary of the National Council of

J. H. Davis

J. S. Russell

Farmer Cooperatives, predicted further mechanization, fewer farms, fewer farm families, and surpluses of farm products.

On the bright side, Davis saw greater demands from the increased population in the United States. World demand also will remain high, he said. Lower income people have had a taste of richer diets and are not likely to lose their taste for meat.

"Farmers are much better organized than they were after World War I," Davis said. "Our co-ops have kept the cost of marketing animals close to the depression level. Through our co-ops we can take the lead in developing larger markets. They are responsive to the farmer. They can set the price in the farmer's interest. From these views it can be seen that I am reasonably optimistic about the future of American agriculture."

Illinois members of the Chicago Producers board of directors whose terms expired this year were reelected to three-year terms. They were Vice President E. R. Gehring, Knox county, and William Temple, LaSalle county.

President Ted Funk expressed his satisfaction with the record for the past year, his first as head of the Chicago Producers. Savings of $40,323.40 in 1947 compared favorably with a net operating loss of $42,460.41 in 1946.

PLAN NOW FOR Annual Sports Festival

THE ninth annual Illinois Farm Sports Festival will be held this year on Aug. 26 and 27 at its old location on the campus of the University of Illinois in Champaign-Urbana.

These dates were set last month during the first meeting of the administrative committee and announced by Otto Steffey, Stronghurst, Henderson county, IAA director and chairman of the Festival.

This year district elimination contests may be held in the mass entry sports of bowling, and softball, and possibly the skeet and trap shoots and the folk festival events.

Plans for holding county and district contests were discussed last month in a series of county meetings. Many details will be worked out for the entire Festival program when the state committee meets in Chicago early in April.

Several events will probably be eliminated this year since few persons entered the contests. Knot tying, 4-H marching teams and 4-H dramatizations will probably be dropped.

Rural chorus competition will not be held this year at the state Festival if plans are completed to hold district Folk Festivals where participation and competition points can be awarded.

It is planned however to ask each county chorus to be part of a massed state chorus on the Thursday evening (Aug. 26) program.

A similar event is planned for the Friday (Aug. 27) afternoon program when each 4-H county chorus will be invited to join a massed state 4-H chorus.

Women's events will probably be eliminated and instead divisions will be set up in the various events for men, women, rural youths, etc.

Golf and tennis may be added to the calendar of sports events as well as mixed teams in the 4-H and open division of table tennis. In the Folk Festival Contests Rural Youth, open, and 4-H divisions may be added to the folk and square dancing events.

New events have been added from year to year. One of the reasons given for these additions has been advanced by Roy Johnson, secretary of the Farm Sports Festival. Since the early days of the Festival the age of Farm Bureau members has decreased. There are now a greater number of members less than 35 years of age than there were 10 years ago.

Over-crowding of many of the events at the state Festival last year has been one of the principal reasons given for holding more district elimination contests.

Last year more than 2,000 softball players alone competed on campus ball diamonds during the two-day contests. District contests would eliminate a number of these players before the state Sport Festival was held.

District contests would also cut down on travel expenses and would balance and increase participation in county programs.

May 1 Deadline

All teams of the Farm Bureau Baseball League should be entered with the state secretary, Roy Johnson, IAA director of special services, by May 1. Teams may enter up to June 1 provided the member teams in the affected district agree unanimously to such entry.

The Illinois Farm Sports Festival administrative committee discusses changes in plans for the 1948 Sports Festival to be held at the University of Illinois. Left to right: E. H. Regnier, U. of I.; A. C. Johnson, Kane county farm adviser; R. H. Haley, U. of I.; Secretary Roy Johnson; Chairman Otto Steffey; Mrs. Helen Turner, extension service; and Mrs. Alice Herren, extension service.

Top: Illinois, Missouri, and Arkansas stockmen cock an attentive ear during sessions of Producers' annual meeting at St. Louis. Second: Pulaski-Alexander farmers get together during St. Louis Producers' banquet. L. to R.: C. A. Taake, T. H. Aldrich, G. W. Aldrich, Adam Reichert, Robert Reichert, August Reichert, W. E. Parker, J. P. Redman, John W. Spaulding, Ralph Taake, and Leslie Broom, farm adviser.

Third: Group shown chatting together during Chicago Producers meeting are, left to right: Harry Russell, College of Agriculture; Carl M. Johnson, DeKalb, Producers director; P. O. Wilson, manager, National Livestock Producers Commission Association; Theodore Funk, McLean, Chicago Producers president; and IAA Vice President F. E. Morris, Sanagmon.

Bottom: An IAA group hears Dr. M. J. Warner (third from left) discuss foot and mouth disease. Left to right: Dr. Don Van Houweling, IAA veterinarian; F. E. Morris; Dr. Warner; and IAA Directors Otto Steffey and R. V. McKee. Dr. Warner, a veterinarian, is a member of the Colorado Farm Bureau board and recently surveyed the foot and mouth disease situation in Mexico for the state of Colorado.

Livestock Co-ops HAVE RECORD YEAR!

ILLINOIS' two great metropolitan cooperative livestock marketing outlets at Chicago and St. Louis both reported the greatest dollar volume of business in their 26-year histories in 1947.

At their annual meetings last month, the Chicago Producers Commission Association reported handling 14,821 carloads of livestock valued at $70,797,304 and the Producers Livestock Marketing Association of St. Louis reported handling 17,415 carloads valued at $68,581,400.

The St. Louis cooperative announced that $52,500 would be refunded to its members from the sale of their livestock in 1947. The Chicago Producers announced savings for the year of $[illegible].

The St. Louis meeting voted to change the name of the organization from the Producers Livestock Commission Association to the Producers Livestock Marketing Association.

Manager H. D. Wright said the St. Louis association received the two largest shipments during the year from the Illinois counties of Pike and Montgomery to lead the tri-state area. Pike shipped 639 cars and Montgomery, 511.

Manager D. L. Swanson of the Chicago Association reported that 1947 receipts came from 27 states. Illinois led with 11,758 of the 14,821 cars received. Swanson's figures showed that the Chicago Producers handled more livestock than the next three high commission firms combined.

Swanson asked for continuance of the fine support given the Chicago Producers during 1947. In doing so, he said, you will benefit not only your neighbors, but yourself as well, and you will get a great deal of personal satisfaction from such efforts. Swanson said more support would be needed to sustain volume in 1948 because "at the start of the year we had the smallest number of cattle on feed in eight years, and the smallest number of sheep and lambs in 20 years."

Principal speaker at the St. Louis meeting was J. S. Russell, farm editor of the Des Moines Register and Tribune who spoke on the recent trip he made to Europe with a group of Iowa farmers. Here's IAA Position on Margarine

FARM BUREAU ASKS THAT BUTTER-MARGARINE IDENTITIES BE RETAINED AND EMPHASIZED

★ ★ ★

Following is a statement presented by Homer W. Curtiss of Stockton, Ill., member of the Illinois Agricultural Association board of directors and chairman of the IAA marketing committee. The statement was given Friday, March 12 in Washington before the Committee on Agriculture of the U.S. House of Representatives. It represents the attitude of the IAA on the current butter-margarine controversy.

MY NAME is H. W. Curtiss, of Stockton, Illinois. I am a general farmer and operate 400 acres. From this farm I sell approximately 100 gallons of milk daily. On this farm I also grow an average of 30 acres of soybeans each year. I am appearing here on behalf of the Illinois Agricultural Association, of which I am a member of the board of directors and chairman of its marketing committee.

The Illinois Agricultural Association is a general farm organization and has more than 150,000 members. Illinois is a prominent dairy state and ranks fifth in the United States in milk production. Last year five and one-half billion pounds of milk was produced on Illinois farms. Illinois is also a large producer of soybeans.

In 1947, Illinois produced 35.96 per cent of the total national soybean production. Cooperative marketing associations affiliated with the Illinois Agricultural Association last year handled 2,625,000,000 pounds of milk and in excess of 15,000,000 bushels of soybeans.

Therefore, it is obvious that our organization is interested in this proposed legislation as it affects the general welfare of agriculture and we are not representing either the dairy or the soybean producers to the exclusion of one or the other. Many of our members are producers of both dairy products and soybeans, as is the case on my own farm. Being in this position, we are vitally interested in the butter-oleomargarine issue and have given it careful and considerate attention during the past several years.

The board of directors of our organization has very recently had a thorough discussion on the proposed changes in taxes upon oleomargarine and on Jan. 16, 1948 adopted a resolution taking the following position:

Homer W. Curtiss

> "We will not oppose removal of the taxes on oleomargarine, provided some other means of preserving the identification as between the two products is developed."

This action commits us to oppose all bills at this time now pending before Congressional committees dealing with the oleomargarine question, as it is our understanding that they do not provide adequate means of identification between butter and oleomargarine. In Illinois we have a positive identification provided by state law, which prohibits the sale of oleomargarine that is colored to imitate butter.

We are interested, however, in national legislation as our farm products, both dairy and soybeans, move far beyond Illinois and are affected by national economic conditions. We feel strongly that the best interests of all farmers, including dairymen, soybean producers and cotton producers, would be protected by legislation of the type we suggest.

The general farm is the predominant type in Illinois and it is impossible to divide our farmers into separate and exclusive commodity groups. We believe that the following facts should be considered in an analysis of this issue as it affects agriculture as a whole:

1. There is a very close relationship between the wholesale price of butter and the price received by farmers for butterfat. There is no such relationship between the wholesale price of oleomargarine and the price received by farmers for soybeans.

2. The price received by farmers for their butterfat affects the amount of money which dairy farmers have to spend for soybean meal. When butterfat prices are good, they are in a better position to compete for the available supply of soybean meal for feed. The soybean market is thus strengthened.

3. Soybean oil used in oleomargarine contributes a relatively small per cent to total farm income. On the other hand, the price of butterfat has an important affect upon total farm income as it directly affects the prices, not only of butter, but the price level for all dairy products, including fluid milk.

It appears that the oleomargarine interests, in supporting the proposed legislation to remove the taxes now imposed, are interested primarily in making it possible to substitute and sell oleomargarine on the merits and consumer acceptance of butter.

Otherwise they would support legislation of the type we suggest which would remove the tax, but provide for a positive identification between the two products. We believe that such identification provided by law would be fair to all interests and would be in harmony with our American ideal of fair competition.

Farmers and consumers alike have depended upon the recognized yellow color of butter for their protection. It is as important as any patent or copyright held

(*Continued on page* 21)

LETTERS TO THE EDITOR

CRASHING PRICES MAKE CHANGES IMPERATIVE

Crashing farm prices recently cost farmers millions upon millions of dollars. Nearly a month after the price landslide started on the farm, farmers were still waiting for some reaction to set in that would bring down their costs of operation.

There was some reduction in the cost of the feed farmers had to buy, but everything else remained at inflated levels. Wages paid to hired men, and farm machinery and fertilizer prices showed no indication of scaling off. Federal taxes will remain at confiscatory levels, as there is no indication at Washington that the costs of government will be reduced, as a forerunner to the general tightening up that will have to follow diminishing farm returns.

Farmers will not object to taking the lead in suffering unjustified losses in income — they are accustomed to it through long and bitter experience — provided the cuts they have suffered become general all along the line.

One of the excuses for the slash in farm prices, the experts say, is the probability of abundant crops in Europe. More food there means reduced demand for the produce from American farms.

If conditions are so much better overseas than had been anticipated, there will be less need for so many billions in American gifts of food, machinery and what not. The slashing of a few billions from the ERP, and a conscientious pruning of bloated federal payrolls will go a long way in adjusting federal expenditures to the scale the farm price slash has ordained.

The crash of farm prices should be a warning to farmers to revise their ideas as to the advisability of a super-abundance of production. It might be possible on the average farm to reduce production considerably with no loss in net income. Boarder cows are a loss, but they require a lot of work and feed, and their production helps to fill, and crowd down, the market for butterfat.

Farmers certainly cannot afford now to pay semi-skilled workmen, such as carpenters or painters, $1.50 to $2.50 an hour, when they are working at food production at 50 cents an hour.

Wiring, plumbing, carpentry, machinery repair — these are things the average farmer can do for himself — things he no longer can afford to hire. Time spent in food production can now be spent to excellent advantage on jobs such as these.

The period of belt-tightening has started on the farm, so as sure as night follows day it will follow in every line of endeavor, but the shrinking process is always months and sometimes years in developing elsewhere. Farmers can hasten the levelling-off period by watching their outlays for over-priced labor and over-priced merchandise. Buying their volume farm supplies through their Farm Bureau Service company dealers will mean many dollars saved at the end of the year.

The Farm Bureau is working on national and state levels to block the effects of the price debacle and everything will be done that can be done to influence an upward swing.

Minnesota Farm Bureau
St. Paul, Minnesota

Adolph Stumpf (right) signs up Monroe County Farm Bureau's 1000th member. It's his son, Charles, who started farming last August after war service in Europe. Mrs. Charles Stumpf witnesses the signing. The signing of the 1000th member came on the day before Monroe's 30th anniversary.

COVER SERIES

WOULD it be possible to secure the series of front cover pictures illustrating historic and picturesque Illinois scenes of Record-Illinois Agricultural Association?

Mrs. Mabel Doneghue, Regent of Macomb Chapter of D.A.R. thinks these pictures would add so much to our history book of the chapter.

I have been able to secure the Lincoln Home and the Lovejoy Monument. We desire the full set with the historic account of each.

Mrs. Perle B. Fisher, Historian
Gen. Macomb Chapter, D.A.R.

Illinois Grain Sales Manager Retires

FRANK HAINES, sales manager of Illinois Grain Corporation, retired after 10 years with the Illinois Agricultural Association affiliated grain brokerage company on March 1, 1948. He had been associated with the company since its organization in 1938.

Frank Haines

Haines has been a member of the Chicago Board of Trade since 1912. Before becoming associated with Illinois Grain, Haines was with the firm of J. H. Dole and Company for 35 years.

He served as vice-president and manager of Illinois Grain Corporation from 1938 until January 1947 when he became vice-president and sales manager.

Illinois Grain flourished under Haines managership. During the years he served the organization, it handled 174,000,000 bushels of grain and soybeans.

Front Cover

THE 11th of our series of historical and picturesque Illinois covers is one of the most unusual buildings in the state. It is the Baha'i temple at Wilmette in Lake county. This structure is the central shrine and house of worship of the followers of Baha'u'llah in North America.

Baha'i means simply "a follower of Baha'u'llah," who in 1863 announced in Persia that he was the chosen manifestation of God for this age, and began preaching a doctrine of unity of all peoples and all religions. The Baha'i temple was started in 1912; will not be completed until 1953. It is 161 feet high; 152 feet in diameter; will cost more than $2,000,000 when completed. Seating capacity will be 1600.

The temple is a blend of eastern and western architecture. The nine sides signify the nine great world religions. Outer design is influenced by the symbolism of religion. The Baha'i faith has no professional clergy. It teaches that all the great prophets were inspired by the same God; that we all worship the same God. Using the sacred scriptures of all religions in their teachings, the Baha'is say they wish to "glorify the divine truth underlying all revealed faiths."

"Farm Bureau is

Farm Bureau is a brotherhood where farmers can enjoy the friendship of their neighbors. Shown at a recent meeting in Benton are l. to r.: John Glauber, Emmett Kelm, organization director; William Galle, Theodore Miller, and Ben Tillman, farm adviser, all of St. Clair county.

There's a place for young and old in Farm Bureau. At a recent meeting in Hamilton county to welcome new members, the longest married and shortest married Farm Bureau wives receive orchids. Left, are Mr. and Mrs. Clarence Ernst, married 44 years, and right, are Mr. and Mrs. Franklin Johnson, married two months.

'. . . It Can Be Kept Great by Being Close to the People'

FARMERS in America have always been called an individualistic lot. It has been said over and over of them that they cannot work together; that they will not stick together.

The story of trials and errors that have been made in the setting up of farm organizations in the United States is a romantic story. It has all led up to a realization on the part of farmers that they can organize in their own interest, and they can stick together to get things done for themselves through an organization that they cannot do alone or individually.

Farmers of the United States are rapidly becoming a minority group in the country. In Illinois farmers now represent less than one-tenth the total population, and in numbers are therefore definitely a minority group.

Today I want to talk primarily about the Farm Bureau in its national, state and county aspects. Let us look first at the national picture—the strength of the American Farm Bureau Federation. At the end of 1947, the American Farm Bureau Federation had a recorded membership of 1,275,000, and that membership is still growing. The Farm Bureau is a family membership organization and now represents about four and one-half million farm people throughout the country.

Let's look at the state situation. Illinois now has more than 150,000 members. We know, of course, that in Illinois, men take leadership in the Farm Bureau, since farm women have their own organization, the Home Bureau. Still, in general, there is only one membership in the Farm Bureau per family and many families look upon it as a family membership.

There is a total of 210,000 farm families in Illinois, of which three-fourths are Farm Bureau members. Indeed, in some counties, 100 per cent of the farmers belong to the Farm Bureau. The Farm Bureau and its state organization, the Illinois Agricultural Association, are thus even more representative of farmers in the state of Illinois than the American Farm Bureau Federation is of the farmers of the nation. Without question it is the greatest state farm organization of its kind in the world.

Many of the benefits of the Farm Bureau can be counted in terms of dollars and cents, but the most important, the most significant, and the most lasting values of the organization cannot be so counted. Let us look, however, at some of the services performed by your organization.

The commercial benefits of the Farm Bureau are most easily counted in terms of dollars. The cooperatives, which include grain, livestock, dairy, fruit, cooperative locker, serum, wool, cream, milk, insurance, supply, and other service cooperatiyes, pay rich dividends in patronage and in stock.

Those of you who have stock in these cooperatives know that they pay at least six per cent. Thus a $15 investment, which is the cost of a membership in the Farm Bureau, can mean $150 to $300 returns in dividends alone to the average tractor farmer in central Illinois.

Public and legislative services are harder to count in terms of dollars and cents. Some of them can mean much greater differences than returns on the basis of patronage or investment in stock. Legislative representation in Washington and in Springfield can mean real savings and protection.

au is a Great Organization"

Editor's Note

Farm Bureau as it looks to a non-farmer is pictured in the following abridged speech by Dr. D. E. Lindstrom, professor of rural sociology at the University of Illinois, given at the recent annual meeting of the Douglas County Farm Bureau. We feel it has a great deal of merit and interest for all farmers. Dr. Lindstrom is a long-time associate member of the Champaign County Farm Bureau.

The fact that your organization was able to secure appropriations for farm-to-market roads so that you now can drive over all-weather roads to market, to school, to church, gives you the kind of service and satisfaction that I think few of us can count in terms of dollars and cents.

Tax assessment equalization is reported in your own annual report of the Illinois Agricultural Association to save farmers from 10 to 30 per cent on real estate taxes. If you paid $300 in real estate taxes before, this can mean a saving of as much as $90 in taxes to you. With the enlargement of our taxing bodies to include town and country people, it is increasingly important that the farmer's property be taxed on a fair basis—the same basis as the townsman's property.

The establishment of price policy laws can mean the difference between a real profit and a real loss on an individual farm in a single year.

Other important services which are provided by your organization are legislation for township consolidation for road purposes; the limiting of taxation above the maximum legal limit, without referendum to 10 to 15 per cent above that legal limit; the giving to rural people of a voice in the administration of the hospital authority (rural people can now by petition of 10 per cent ask for a separate vote on the establishment of a tax supported hospital;) and the establishing of laboratories for testing for Bang's disease, which may result in the elimination of the dreaded undulant fever.

The Illinois Agricultural Association provides services in safety and public health. Help has been given in reorganizing rural schools.

The educational services which are most difficult to count in terms of dollars and cents often result in the highest returns. The Farm Bureau in Illinois, through its county relationships to the Extension service, has a direct avenue to the research findings of the University of Illinois agricultural experiment station.

Not the least important—possibly the most important—is the work done relating to soil use and care. The farmers of the state have set up 66 soil-testing laboratories in Illinois to give farmers an opportunity of determining exactly what they need in the way of limestone, phosphate, and potash.

Studies in human and group relationships have just gotten underway at the agricultural experiment station, and we know only too little about how to live one with the other. It is even more difficult to measure the value that may come out of such things as improved rural schools, the adequate protection of health —which can mean the difference between life and death in a farm family—and the improvement of rural community life through better churches, better libraries, more efficient local government, and social welfare and recreation that will mean happiness to the families.

These cannot be measured in terms of dollars and cents. Nor can the value of organizations for youth and adults in the community be measured in money. 4-H clubs do make money for the boys that take part. Many a boy has been able to start in farming as a result of his earnings through his 4-H club projects.

The greatest value in 4-H club work, however, is the development of character and ability. Nor can members of our Rural Youth organizations measure what they get in terms of dollars. A Rural Youth group can give new life and new promise to the youth who are members. The Home Bureau organization has more than improved farm women's cooking ability; it has made them sensitive to the needs of the family, and the community and brings to the family many benefits which could not be brought otherwise.

These are only a few of the benefits of the organization and related organizations of which you are a part. You must recognize, however, that the man who gets the greatest benefit is the man who not only regularly pays his dues, but the one who goes out to help build the organization.

The Farm Bureau in your county, the Illinois Agricultural Association in Illinois, and the American Farm Bureau Federation in the United States, have come to be important organizations in the life of every farmer, for not only do benefits come to the Farm Bureau members themselves, but benefits in the way of public services, educational services, social and cultural services come to all farmers in the community.

You cannot improve the road past your house and not improve the road past the house between you and the hard road. Thus your neighbor, who may not have helped to make the organization that helped to secure the appropriations that helped to build the road, gets the benefit of the organization, even though he is not a member of it. There are many other services and benefits that this nonmember gets. It is the task of those of you who are members to get him to appreciate that he also benefits even though he does not help support the organization. One of the great concerns of the leadership of the Farm Bureau in Illinois and in the United States, it seems to me, is to be sure that the average member has the opportunity to help decide on the policies that are made by the organization. This can be done most effectively by the setting up of local community organizations and the holding of local meetings in which the policies of the organization are fully discussed and the reactions of the members to these policies are secured by vote; then these reactions should be relayed to the county Farm Bureau board and to the state board by the elected representatives of the local group.

The Farm Bureau is a great organization; it can be kept great by being kept close to the people—their wishes, desires, and their interests.

608 SOUTH DEARBORN STREET • CHICAGO 5, ILLINOIS

WAR ON ILLINOIS FLIES

A FLY-FREE state in '48. This is the rallying cry of farm and urban groups who are uniting behind local, state organizations determined to wage an all out battle against the common house and barn fly.

The campaign will be directed by the Illinois Agricultural Association, the Illinois Natural History Survey, the University of Illinois College of Agriculture, and the state department of public health.

County Farm Bureaus and farm advisers working with city health authorities will direct the local drives. They will enlist the aid of druggists, hardware dealers, farmers, city housewives, Chambers of Commerce, and others to rid communities of flies.

The drive will start early in May. The first step will consist of ridding farms and cities of fly-breeding sources. These include decaying plant and animal matter — manure, garbage, and rotting straw.

This clean-up work should be finished before the middle of May in Southern Illinois and before Memorial Day in the Northern area to rob flies of a place to lay their eggs.

The second step in the state-wide campaign will be the farm-by-farm spraying with fly-killing DDT.

Making a farm fly-free is not a hard job nor an expensive one. George Metzger, IAA field secretary, says a farmer can do the job for about $10 worth of spray materials. Any small portable pressure spray such as one used for spraying noxious weeds can be used.

All farmers need to do, Metzger says, is to clean up such places as strawpile butts and manure piles early before flies start to hatch and then two or three times a year spray where flies most often roost.

Ceilings, walls, posts, pillars, board fences, sheds, chicken houses, and outdoor toilets are good places to spray, Metzger said. In addition, dairy cattle should be treated about every three weeks and beef cattle two or three times during the fly season.

Whether or not your nearest neighbor sprays, you can still rid your own farm from the pests, Metzger pointed out. Flies do not travel far, and if you do pick up a few from a near neighbor, your own spraying will kill them.

At present 88 of the 99 county Farm Bureaus are enlisted in the fly-free campaign. It looks now as though this midsummer pest will soon be doomed.

County meetings for last minute instruction and kick-off pep talks are expected to be held throughout the state the last two weeks in April. The first two weeks in April, public demonstrations will be held to explain the use and effectiveness of equipment and show what can be accomplished by spraying.

Throughout the month of June efforts will be centered on further intensive spraying and the complete elimination, if possible, of all flies missed during the first week in June.

Metzger emphasized that the success of the program will depend too on a widespread follow-up drive to hold all gains. This will require sprayings at regular intervals throughout the summer and into the fall.

By October leaders are expected to be able to appraise the results of the campaign to rid the state of flies. Farmers, in particular, will be interested in the results of the drive. They stand to gain much from its success.

Flies are bred in filth. They live in filth. And transmit filth born disease. They carry more than 20 diseases of humans including typhoid fever, tuberculosis, dysentery, and possibly polio.

Metzger emphasizes also that flies cost the farmer money. Tests have shown that fly-free cows give up to 15 per cent more milk during the three or four summer months. Beef cattle will gain up to a third of a pound a day more if they are not pestered by flies.

Health and money saved are important. But think of the comfort! How many times have you been blinded when old bossy — searching out a blood-sucking fly — clubbed you in both eye balls with the blunt end of a fast swing tail?

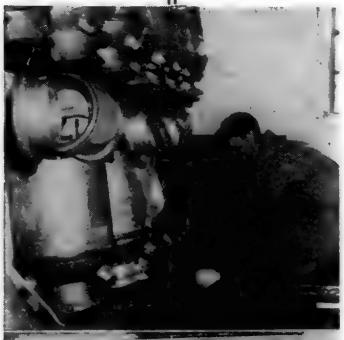
Top. John Derrer, Carroll county, pulls out can from electric milk cooler housed in sunken pit. Center. Sam Kloepping stands by window of well-lighted cement block basement. Calves are healthy. Bottom. Bob Shubert is pleased with new metal storage rack which keeps pails and cans off floor. Right: In Bob Shubert's Carroll county dairy barn you see what it takes to produce Grade A milk: clean, healthy cows; well-lighted barn with painted walls, tight floor and ceiling.

Plan for . . . 'Grade A' Now



By J. S. MASON, Director IAA Dept. Dairy Marketing

DAIRYMEN who are thinking of modernizing their dairy barns would do well to plan their improvements to pass Grade A requirements. New Grade A markets may be open to them within the next few years.

Sam Kloepping, Stephenson county dairyman near Pearl City, provides an example of a farmer who planned before he rebuilt. He rebuilt his old dairy barn last fall to pass the inspection for Grade A milk and is selling his milk now at a premium price to the Prairie Farms Creamery at Mount Carroll.

Kloepping's barn, like many, was in need of remodeling. It was old and poorly lighted. His rebuilt barn, in contrast, is as bright inside as a modern store. It has made it possible for Kloepping to qualify for Grade A milk at a time when Illinois markets are expanding.

Farmers who intend to build or remodel to meet Grade A, as Kloepping has done, will do well to check first with inspectors from markets where their milk will probably be sold.

The trend in Illinois is toward Grade A. Consider that municipal Grade A ordinances for bottled milk are now in effect at Chicago, Elgin, Peoria, Decatur, Rantoul, Rockford, Freeport, Davenport, Ia., St. Louis, Mo., and East St. Louis. Rock Island and Champaign will require Grade A milk late this year. McLean county has passed an ordinance effective April 1, 1949. Chicago also requires that Grade A be used in the manufacture of ice-cream, and there is a trend toward requiring Grade A milk for additional products in large metropolitan markets.

Prairie Farms Creamery plants at Carbondale, Carlinville, Olney, Bloomington, Henry and Mt. Carroll, are either handling Grade A now or plan to do so soon. The Producers Dairy of Danville is also developing a Grade A milk supply.

Many Illinois dairymen in the Chicago and St. Louis areas have been producing Grade A for a long time. They have consistantly received a premium price for their efforts.

Records kept by the Pure Milk Association, the Chicago milk cooperative, show that in recent years their farmers have been paid from 45 to 50 cents a hundred above condensery prices. This premium has meant $700 a year more for the average producer who last year shipped 400 pounds of milk daily.

To bear the Grade A label, milk in Illinois must be of a high quality, and produced in sanitary barns amid clean surroundings.

The milk quality is determined largely by its bacteria count (less than 200,000 per c.c.) and by its sediment test. These tests follow a standard pattern.

The physical requirements of the farm, however, vary from city to city and some times from inspector to inspector. It is unfortunate that these have been the cause of bitterness, particularly during the period when Grade A programs were being started in new milk sheds. Differences have usually been settled with the passing of time.

This has not been the case in St. Louis, a condition Sanitary Milk Producers Association is trying to correct.

Many farmers feel, and with reason, that the test for Grade A milk should be the quality and bacteria count of the milk itself. Unfortunately the trend is not in this direction, and inspectors are placing

War on . . . Borer Menace

NORTHERN Illinois farmers are preparing to wage war on the European corn borer as never before.

They have good reason to. Entomologists of the State Natural History Survey say the corn borer outlook for 1948 is a dark one. The right combination of circumstances is expected to bring out a record number in the northern counties.

By JIM THOMSON, Asst. Editor, IAA RECORD

The threat is greatest in northwestern Illinois—north of Highway 34 and west of Highway 51—where 15 counties have nearly three borers per plant. In at least three of these counties the population averages four per plant.

Farther south the borer population ranges from a little over one borer per plant to practically none in southern Illinois.

Corn borer infestation has been heavy in northern Illinois because the growing cycle of the corn crop has closely paralleled the growth cycle of the borer.

If moths come out early and the corn crop is late, the number of borers may be no greater and perhaps lower than in 1947. On the other hand, if the corn is planted early and moths come late, Natural History Survey entomologists says we may well expect a corn borer outbreak more disastrous than we have yet experienced.

What can the farmer do to meet the corn borer menace? According to Entomologist G. C. Decker, the most important single thing a farmer can do to control borers is to plow his fields clean.

"A good clean plowing job," Decker says, "can make a tremendous contribution to corn borer control. Ninety-nine per cent of the borers can be destroyed in this manner."

When the corn is above ground and the borer attacks the young plant in damaging numbers, it is necessary to use a deadly insecticide. DDT is the most practical. It is cheaper and plentiful.

When applied at the right time it takes about one pound of DDT to the acre at a cost of $1.25 to $1.50. Experiments show a 3 to 16 per cent increase in corn yields where the field is treated with insecticide. Failures were reported but spraying was 90 per cent successful and paid for the work done plus a margin of profit. Commercial sprayers are expected to be in the field this year with rigs worth $2,000 to $3,000. They charge around $2.50 per acre including materials. Airplane applications of DDT run $3.50 to $4.00 per acre. Ground sprays for the average farm are available for $200 to $500.

According to J. H. Bigger, Natural History Survey entomologist, if DDT applications are made in late June and the crop is picked in October and November no harm will result from feeding it to meat animals.

He said, however, that it was not advisable yet to feed the corn to dairy animals until further experiments have been made.

Entomologist J. M. Wright, is studying the effects of an imported parasite on the corn borer. He said that results so far were inconclusive but encouraging.

Farmers plagued by corn borers this spring are advised to get in touch with their farm advisers during the early part of the growing season in order to know when to apply the insecticide at the proper time.

This is a sprayer used by the Illinois Natural History Survey in corn borer control experiments in northern Illinois last summer.

Corn borer eggs are readily visible on the underside of the corn leaves. Inset shows larva in corn stalk.

Illinois Farm Supply Co.

Grows and Expands

THE Illinois Farm Supply Company observed its 21st birthday on March 4. It has reached the age of maturity. And with this maturity comes added growth and expansion. The company has had a long and successful history in serving the Farm Bureau members of Illinois. Now, however, it is entering a new era. This new era means entering the field of processing and manufacturing in order to provide greater assurance of supplies and increased security to more than 100,000 Farm Bureau patrons of its 104 Member Companies.

The plans for the growth and expansion of the Illinois Farm Supply Company include the production and manufacture of needed plant foods and feeds as well as the petroleum products necessary for farming. To this end, each of the member companies, with their many hundreds of volunteer Farm Bureau workers, has been actively engaged in a statewide campaign for the sale of additional shares of their respective preferred stock. A portion of these funds will remain with each member company as additional working capital and for necessary required facilities. A portion will be invested in the preferred stock of the Illinois Farm Supply Company.

Through these efforts, farmers themselves are strengthening their own organizations and making definite plans to meet the many challenges of the future.

What are the plans for the growth and expansion of the Illinois Farm Supply Company?

Fuels

The most dramatic move into the field of production and manufacture was the recent purchase of the Pana Refining Company. This purchase involved all of the outstanding capital stock of the Pana Refining Company as well as the facilities including inventories, pipe lines, stocks of crude oil, and buildings.

The annual production capacity of the Pana Refining Company is about 35,000,000 gallons of fuels. At the time of purchase, approximately 50 per cent of this output was under contract to other firms. Thus, Illinois Farm Supply Company, this year, will have about 50 per cent of the total output of the Pana Refining Company available for Illinois Farm Bureau patrons.

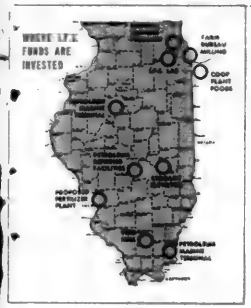
Fleet of fuel transport trucks

Oil barge towboats "Blue Seal" and "Wabash".

Proposed new fertilizer plant

The purchase of this refinery represents a step forward by the Illinois Farm Supply Company to improve its supply position in an all-out effort to provide Farm Bureau members of Illinois with essential fuels needed for farming. The acquisition of this property will serve to alleviate the supply problem to a certain extent but will not be the complete solution of the problem.



And now a word about the suppliers of petroleum fuels. Farm Bureau member patrons should know that the principal suppliers, who have served the Illinois Farm Supply Company in the past 10 to 15 years, are continuing to do a splendid job. However, they are not able to increase the supply to the organization since the acuteness of the present situation has been brought on by the tremendous increase in demand.

Plant Foods

The second big field into which the Illinois Farm Supply Company is expanding is that of Plant Foods. This represents an effort to provide Illinois Farm Bureau members with an increased supply of those plant foods needed to maintain soil fertility and crop production.

The construction of a new fertilizer acidulating and mixing plant was authorized by the I.F.S. company board of directors in their special meeting March 10. The contract bid, submitted by the James Stewart Company, Chicago, was approved with construction of the fertilizer plant to commence on March 15.

The new plant will be located at Fairmount City, Ill., on U. S. Highway 40.

This plant, when completed, will have an annual capacity of 40,000 tons of superphosphate and 40,000 tons of mixed goods. It will serve the southern two-thirds of Illinois utilizing both truck and rail service.

Transportation

The third important decision made by the Illinois Farm Supply Company board of directors is that of further expansion in the field of river petroleum transportation.

The petroleum division of the company supplied 171,000,000 gallons of petroleum products during the past fiscal year. Most of these supplies moved through facilities owned by the company and were transported up the river to terminals by tow boat and barge. Any further increase in supplies, with its resulting savings in transportation, depends upon an enlargement of the company's river transport.

To realize this two-fold objective, the board of directors has authorized the purchase of a third tow boat to go into service with our present owned Blue Seal and Wabash. This proposed new boat will be twice as large as the Blue Seal. Its engines will develop over 1500 H.P. while the Blue Seal is rated at 800 H.P. capacity.

In addition, authorization has been made for the purchase of four new 12,000 barrel barges. These barges, each of which holds 504,000 gallons of fuel, have 50 per cent more capacity than those now owned by the company.

Illinois Farm Supply Company is expanding and growing—to better the Farm Bureau membership of our great state.

Left: Manager Forrest C. Fairchild of the Prairie Farms Creamery at Bloomington watches the new wrapping and cartoning machine recently installed at the Bloomington plant. It wraps and cartons 30 pounds of butter per minute. Operating machine is Carl Ummel (left). Below: Here is a line-up of the packaged dairy products now being produced at the Prairie Farms Creamery at Olney—pasteurized milk, vitamin D milk, coffee cream, half and half, chocolate drink, cottage cheese, buttermilk, whipping cream, and butter.

Prairie Farms PRODUCTS HAVE THE "NEW LOOK"

KEEP ABREAST of the times is a motto that the Prairie Farms Creameries in Illinois have taken to heart. It has meant tackling from every possible angle the problem of selling the best grade of milk and milk products to new or expanding markets.

In this day of machines it means buying the best of modern, intricate packaging machinery—and making sure that the milk that goes into that package is of top quality.

One of these new machines was purchased and installed last September at the Prairie Farms Creamery at Olney. It is a bottling machine that fills and seals milk in paper cartons. Since they started selling dairy products in paper containers last September their sales have doubled.

The products the Olney creamery are packaging in modern cardboard containers include pasteurized milk, homogenized Vitamin D milk, half-and-half, coffee cream, whipping cream, chocolate milk, and buttermilk.

To make their operations more efficient the Prairie Farms Creamery at Bloomington also installed a new packaging machine. It is a butter cutting and wrapping machine that takes butter directly from the churn. The butter comes out of this new $16,000 machine in pound Prairie Farms packages consisting of four quarter-pound sticks neatly wrapped.

The sales of Prairie Farms dairy products have steadily increased for reasons other than new ways of packaging. The creameries have been leaders in the campaign to improve milk quality on the farm.

In bringing home to their farmer patrons the need to produce better milk, the Olney creamery has again been a leader.

More than a year ago they started a quality program and made it attractive to farmers by paying a bonus for milk handled in electric coolers and stored in milk houses. A bonus also was paid for milk that passed certain laboratory tests for cleanliness.

Along their milk routes this winter and spring two quality fieldmen, Lee Shafer and Roger Taylor, are holding meetings to explain the Olney creamery's expanding quality program. Patrons come and bring their families. More than 600 have attended.

Milk quality has improved markedly. It sells well on all new markets where it is being introduced. In the Olney territory Prairie Farms bottled milk is fast becoming the proud campanion of Prairie Farms butter.

Like other Prairie Farms Creameries, this hard hitting cooperative has not stopped even here. They are promoting sales through an active advertising program. W. G. Koertge, sales manager, not only seeks new sales outlets, but works to expand markets where the Olney creamery is now established.

(*Continued on page* 21)

RURAL YOUTH

By ELLSWORTH D. LYON, Director

Young People's Activities

THE Grange gave to the PULASKI-ALEXANDER Farm Bureau the Grange grounds at Villa Ridge with the provision that it be used principally for 4-H and Rural Youth work.

The building as it stood on the grounds was not in good condition or adequate for these purposes. Therefore, it was decided that the old building be razed and a new one built. This new structure will be built entirely from contributions made by the people of the two counties.

The PULASKI-ALEXANDER Rural Youth group gave three performances of the play, "That Watkins Girl," to help raise funds. The three-act comedy was presented at Olive Branch, Ullin, and Mound City, Jan. 29, Feb. 4 and Feb. 12. The proceeds from the play totaled $438.78.

Educational Meetings

Educational meetings over the state are adding much information to Rural Youthers' fund of knowledge.

KANE heard E. E. McCoy of the County School Survey Committee in February speak on "Proposals of the Survey Committee." He emphasized the proposal to equalize taxes for educational purposes in the public schools. A roller skating party was planned for March with guests from COOK and DuPAGE. Avery Stevens and Harry Buchholz served as the committee.

Using agree-disagree statements on "How to Find and Win a Mate" EDGAR had fun in January discussing matrimony. In February Ralph Pantle chose five "quiz kids" and staged a program on "Highway Safety." An informal dance was held March 10.

KANKAKEE sponsored a county-wide meeting for people of all ages on farm and home grounds planning under leadership of Prof. Keith Hinchcliffe, U. of I. The February meeting featured a debate on the subject, "The New Look in Women's Fashions."

LA SALLE heard Richard Hornbeck in January on the "Advantages of Insurance." The "Rail Splittin' " party in "Abe's Cabin," Farm Bureau auditorium, was cast in the form of the annual banquet, Feb. 4. Dr. W. G. Kammlade, U. of I., was guest speaker. "The cabin was decorated with a brown false ceiling, a large fire place at one end, brown paper on the walls representing logs, and a rail fence built across the front of the stage."

EDWARDS heard a talk on "Early History" of the county by Mrs. Virginia Skinner. In the March meeting the group visited the Edwards County Historical Society.

"Lincoln's Life Decisions" was the educational feature of WAYNE county Rural Youth at the February meeting held at Fairfield.

Home Recreation

"Home Recreation" was the January topic for TAZEWELL and was led by Velma Ackerman. Prof. Hinchcliffe, U. of I., presented "What's New in an Old House" in February.

Farm Adviser C. A. Hughes showed his North COOK group interesting pictures taken last fall on "The Oregon Trail," and "In the Black Hills."

The Prophetstown-Tampico Warriors and Newton Notions of WHITESIDE held a joint meeting in January at Erie and heard a talk on the operation of the casein factory there. The county-wide "George Washington Ball" at Galt Grange, was the big event of the year. Frances Bauer headed ticket sales.

SCOTT heard a temperance address given by the Rev. Kenneth Douglas at Bluffs high school, Feb. 17. LOGAN went en masse to Lincoln high school to hear Pres. George D. Stoddard, U. of I., on Feb. 26. The group was represented by a member on the platform with Dr. Stoddard.

SHELBY had social dancing instruction under the leadership of Miss Harriet Elliott, U. of I., Feb. 26, at the Westervelt high school.

MADISON says in a recent issue of the Tattler, "Nope we didn't forget all about the membership drive. There's just not too much to report except more dues are coming in right along and there have been several new names added to the mailing list of the Tattler."

The Pleasant Valley group of McHENRY presented "Travel Etiquette" as the educational feature for the January meeting. Leader was Don Perkins.

Bureau Holds Parents Night

BUREAU held parents' night Feb. 19 with a panel discussion. The theme was "Extension Service Speaks." MERCER staged a big musical show Feb. 3. Surrounding counties contributed talent for this event.

MACON'S members held an "End of the Year" banquet on March 6 in Warrensburg, where they looked squarely at the values and purposes of Rural Youth.

Reporter Viola Ewald writes: "Activities of EFFINGHAM'S Rural Youth have been on an upward trend. Rural Youth Day at Farm and Home Week was attended by Pres. Fred Laugerhausen, Warren Soltwedel and Norman Kirchoffer.

"A special feature of the February meeting was a recording made of 25 of the members by the manager of station WCRA and played on the radio station a few days later. Skating parties are held the last Thursday of each month and have proved to be very popular with the Rural Youthers. Other activities of our monthly meetings have been short skits and plays, quizzes, ensemble music, and the old-time folk and square dances."

Many Raising Funds

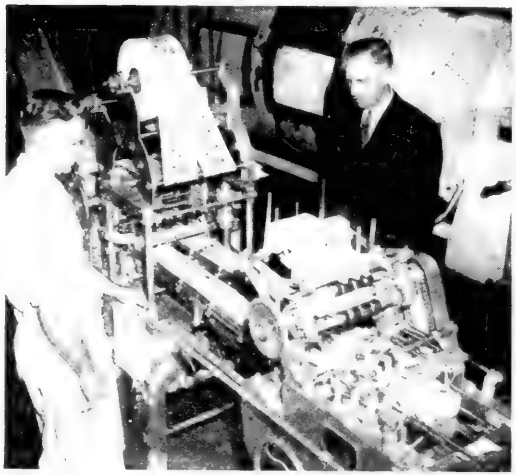
Groups throughout the state are holding box socials and sponsoring plays and banquets to raise funds for various activities, to make entertainment, and to provide an opportunity to work together.

BOND'S January meeting was a movie entitled "Pop Rings the Doorbell." A box social was held at Smithboro, Feb. 24, a play was presented in connection with the event. CHRISTIAN, holding its banquet at Taylorville, March 27, scheduled Ray Farris of CLARK to serve as toastmaster. OGLE banqueted at Polo March 6, saw Insurance Director Clare Bradford's colored slides of his western travels, and then closed the evening with dancing. Committee members were Fred LaBudde, Helen Baker, Ed Dew, and Ed Schnulle. Another big venture was the presentation of the annual Rural Youth plays at Mt. Morris and Polo. KNOX built its banquet around the theme of "Down on the Farm." Twelve counties were represented by 230 guests.

RICHLAND planned its 7th annual banquet around the theme — "Don't Wait, It's '48." Miss Marion Simon, Jasper county home adviser, spoke on the theme, "Developing a Better Personality."

Warren Bull, Stephenson county, asks for a higher bid as he auctioneers at a recent Rural Youth box social.

La Salle county Rural Youth officers recently elected: back, Wayne Elliott, Don Freebairn, vice pres.; Bob Ashley; and Stanley Wright. Seated: Mae Pitstick; Betty Barr, sec'y treas.; and Mariam McConville, president.



Left: Manager Forrest C. Fairchild of the Prairie Farms Creamery at Bloomington watches the new wrapping and cartoning machine recently installed at the Bloomington plant. It wraps and cartons 30 pounds of butter per minute. Operating machine is Carl Ummel (left). Below: Here is a line-up of the packaged dairy products now being produced at the Prairie Farms Creamery at Olney—pasteurized milk, vitamin D milk, coffee cream, half and half, chocolate drink, cottage cheese, buttermilk, whipping cream, and butter.

Prairie Farms PRODUCTS HAVE THE "NEW LOOK"

KEEP ABREAST of the times is a motto that the Prairie Farms Creameries in Illinois have taken to heart. It has meant tackling from every possible angle the problem of selling the best grade of milk and milk products to new or expanding markets.

In this day of machines it means buying the best of modern, intricate packaging machinery—and making sure that the milk that goes into that package is of top quality.

One of these new machines was purchased and installed last September at the Prairie Farms Creamery at Olney. It is a bottling machine that fills and seals milk in paper cartons. Since they started selling dairy products in paper containers last September their sales have doubled.

The products the Olney creamery are packaging in modern cardboard containers include pasteurized milk, homogenized Vitamin D milk, half-and-half, coffee cream, whipping cream, chocolate milk, and buttermilk.

To make their operations more efficient the Prairie Farms Creamery at Bloomington also installed a new packaging machine. It is a butter cutting and wrapping machine that takes butter directly from the churn. The butter comes out of this new $16,000 machine in pound Prairie Farms packages consisting of four quarter-pound sticks neatly wrapped.

The sales of Prairie Farms dairy products have steadily increased for reasons other than new ways of packaging. The creameries have been leaders in the campaign to improve milk quality on the farm.

In bringing home to their farmer patrons the need to produce better milk, the Olney creamery has again been a leader.

More than a year ago they started a quality program and made it attractive to farmers by paying a bonus for milk handled in electric coolers and stored in milk houses. A bonus also was paid for milk that passed certain laboratory tests for cleanliness.

Along their milk routes this winter and spring two quality fieldmen, Lee Shafer and Roger Taylor, are holding meetings to explain the Olney creamery's expanding quality program. Patrons come and bring their families. More than 600 have attended.

Milk quality has improved markedly. It sells well on all new markets where it is being introduced. In the Olney territory Prairie Farms bottled milk is fast becoming the proud companion of Prairie Farms butter.

Like other Prairie Farms Creameries, this hard hitting cooperative has not stopped even here. They are promoting sales through an active advertising program. W. G. Koertge, sales manager, not only seeks new sales outlets, but works to expand markets where the Olney creamery is now established.

(*Continued on page 21*)

Carl Cook operates the new paper carton milk bottling machine in the Prairie Farms Creamery at Olney.

Glenn Hasslinger (left), route salesman, and W. G. Koertge, sales manager, pick up case at end of bottling machine.

Gerald Gier, superintendent of bottled milk operations, checks the operation of the Pure Pak machine.

RURAL YOUTH

By ELLSWORTH D. LYON, Director

Young People's Activities

THE Grange gave to the PULASKI-ALEXANDER Farm Bureau the Grange grounds at Villa Ridge with the provision that it be used principally for 4-H and Rural Youth work.

The building as it stood on the grounds was not in good condition or adequate for these purposes. Therefore, it was decided that the old building be razed and a new one built. This new structure will be built entirely from contributions made by the people of the two counties.

The PULASKI-ALEXANDER Rural Youth group gave three performances of the play, "That Watkins Girl," to help raise funds. The three-act comedy was presented at Olive Branch, Ullin, and Mound City, Jan. 29, Feb. 4 and Feb. 12. The proceeds from the play totaled $438.78.

Educational Meetings

Educational meetings over the state are adding much information to Rural Youthers' fund of knowledge.

KANE heard E. E. McCoy of the County School Survey Committee in February speak on "Proposals of the Survey Committee." He emphasized the proposal to equalize taxes for educational purposes in the public schools. A roller skating party was planned for March with guests from COOK and DuPAGE. Avery Stevens and Harry Buchholz served as the committee.

Using agree-disagree statements on "How to Find and Win a Mate" EDGAR had fun in January discussing matrimony. In February Ralph Pantle chose five "quiz kids" and staged a program on "Highway Safety." An informal dance was held March 10.

KANKAKEE sponsored a county-wide meeting for people of all ages on farm and home grounds planning under leadership of Prof. Keith Hinchcliffe, U. of I. The February meeting featured a debate on the subject, "The New Look in Women's Fashions."

LA SALLE heard Richard Hornbeck in January on the "Advantages of Insurance." The "Rail Splittin'" party in "Abe's Cabin," Farm Bureau auditorium, was cast in the form of the annual banquet, Feb. 4. Dr. W. G. Kammlade, U. of I., was guest speaker. "The cabin was decorated with a brown false ceiling, a large fire place at one end, brown paper on the walls representing logs, and a rail fence built across the front of the stage."

EDWARDS heard a talk on "Early History" of the county by Mrs. Virginia Skinner. In the March meeting the group visited the Edwards County Historical Society.

"Lincoln's Life Decisions" was the educational feature of WAYNE county Rural Youth at the February meeting held at Fairfield.

Home Recreation

"Home Recreation" was the January topic for TAZEWELL and was led by Velma Ackerman. Prof. Hinchcliffe, U. of I., presented "What's New in an Old House" in February.

Farm Adviser C. A. Hughes showed his North COOK group interesting pictures taken last fall on "The Oregon Trail," and "In the Black Hills."

The Prophetstown-Tampico Warriors and Newton Notions of WHITESIDE held a joint meeting in January at Erie and heard a talk on the operation of the casein factory there. The county-wide "George Washington Ball" at Galt Grange, was the big event of the year. Frances Bauer headed ticket sales.

SCOTT heard a temperance address given by the Rev. Kenneth Douglas at Bluffs high school, Feb. 17. LOGAN went en masse to Lincoln high school to hear Pres. George D. Stoddard, U. of I., on Feb. 26. The group was represented by a member on the platform with Dr. Stoddard.

SHELBY had social dancing instruction under the leadership of Miss Harriet Elliott, U. of I., Feb. 26, at the Westervelt high school.

MADISON says in a recent issue of the Tattler, "Nope we didn't forget all about the membership drive. There's just not too much to report except more dues are coming in right along and there have been several new names added to the mailing list of the Tattler."

The Pleasant Valley group of McHENRY presented "Travel Etiquette" as the educational feature for the January meeting. Leader was Don Perkins.

Bureau Holds Parents Night

BUREAU held parents' night Feb. 19 with a panel discussion. The theme was Extension Service Speaks. MERCER staged a big musical show Feb. 5. Surrounding counties contributed talent for this event.

MACON'S members held an "End of the Year" banquet on March 6 in Warrensburg, where they looked squarely at the values and purposes of Rural Youth.

Reporter Viola Ewald writes: "Activities of EFFINGHAM'S Rural Youth have been on an upward trend. Rural Youth Day at Farm and Home Week was attended by Pres. Fred Langerhorst, Warren Schwetzel and Norman Kirchhefer.

"A special [illegible] of the February meeting was a roll call [illegible] of the members by the announcer at station WCRA and played on the radio station a few days later. Skating parties are held the last Thursday of each month and have proved to be very popular with the Rural Youthers. Other activities of our monthly meetings have been skit nights, [illegible] games, quizzes, ensemble, [illegible] time look and sports [illegible]

Many Raising Funds

Groups throughout the state are holding [illegible] socials and sponsoring plays and [illegible] projects to raise funds for [illegible] [illegible] entertainment, and to [illegible] [illegible] activity to work toward.

BOND S [illegible] titled "Pop Kings" [illegible]. A box social was held at [illegible], Feb. [illegible] play was presented in connection with the event. CHRISTIAN, [illegible]

Warren Bull, Stephenson county, asks for a higher bid as he auctioneers at a recent Rural Youth box social.

Taylorville, March 2[illegible] Kay [illegible] of CLARK to serve as toastmaster. OGLE banqueted at Polo March 6, saw Assistant Director Clare Bradford's [illegible] of his western travels, and then [illegible] the evening with dancing. Committee members were Fred LaBudde, Helen Baker, Ed Dees and Ed Schnulle. Another big venture was the presentation of the annual Rural Youth plays at Mt. Morris and Polo. KNOX held its banquet around the theme of "D [illegible] the Farm." Twelve counties were represented by 250 guests.

RICHLAND planned its 7th annual banquet around the theme "Don't Wait. It's Now." Miss Marian Sloan, Jasper county home adviser, spoke on the theme, "Developing a Better Personality."

La Salle county Rural Youth officers recently elected: back, Wayne Elliott, Don Freebairn, vice pres.; Bob Ashley; and Stanley Wright. Seated: Mae Pitstick; Betty Barr, sec'y treas.; and Mariam McConville, president.

"Competition Demands High Quality Fruit"

By JIM THOMSON, Ass't. Editor, IAA RECORD

SOUTHERN Illinois fruit growers must sell more fruit by brand name rather than by grade, L. L. Colvis, Illinois Agricultural Association secretary of marketing, told fruit farmers attending the 27th annual meeting of the Illinois Fruit Growers Exchange in late February at Carbondale.

Board and management of the Illinois Fruit Growers Exchange for 1948 are shown in Carbondale during their annual meeting. Left to right, front: Manager R. S. McBride; F. G. Anderson, secretary-treasurer, Union; E. D. McGuire, Jackson, vice-president; and A. O. Eckert, president, St. Clair. Back row: R. B. Endicott, Pulaski; C. R. Boland, Edgar; Nelson Cummins, Jefferson; William Beauman, Johnson; Dr. L. A. Floyd, Bond; and Arthur Foreman, Pike. Not in picture are H. E. Hartley, Marion; Lyman Creed, Marion; and D. B. Kirtland, Crawford.

Colvis, principal speaker at the meeting, pointed out that although the Fruit Growers Exchange is a cooperative dedicated to the service of all fruit growers, it will have to set high standards that growers must meet. "Increasing competition," he said, "demands it."

Leading the fight for quality as he has for many years, President A. O. Eckert, St. Clair county, said: "We can expect tougher competition in 1948. We must keep on our toes. We want to help our growers but the man who grows poor quality fruit year after year isn't fair to his neighbors who are working hard. He isn't fair to his co-op. Neither co-ops nor anyone else can flourish with that kind of business.

"Let's have better color and better finish in our fruit," Eckert continued. "Don't overlook eye appeal. It gets the business."

Manager R. S. McBride reiterated the need for better quality fruit. "Poor quality fruit," he said, "requires more time and effort to dispose of."

The Fruit Growers Exchange cold storage building, used for the first time in 1947, stored 59,000 bushels of apples. McBride said. At the time of the annual meeting, 18,000 bushels were still in storage. Capacity of the building is 60,000 bushels.

McBride told the membership of plans to use a new container for marketing peaches in 1948. The box is known as the Sparton and is used extensively by western fruit growers. Manager McBride announced also that starting this year, the Fruit Growers Exchange would market a high quality peach under the brand name "Prairie Chief." He said the Fruit Exchange plans to build it up as a high quality fruit with a nation-wide reputation. This can be done, he said, only with the cooperation of our growers.

Colvis suggested that some thought should be given to the distribution system. "At present," he said, "fruit distribution is too expensive. Farmers have done a good job of adjusting their products to demand but they still face up to the same old methods of distribution. Livestock people pay about three per cent for transportation and first sale cost while fruit growers must pay about 30 per cent."

The organization's subsidiary, Fruit Exchange Supply Company, distributed patronage refunds valued at $31,312. The refunds went to 900 patrons who bought the record-breaking amount of $743,526 of orchard supplies, insecticides and fertilizers during the fiscal year ending Dec. 31, 1947.

Illinois is expected to have a smaller peach crop in 1948 than it had in the past three years. Peach men estimate an

IAA Co-op Expands Wool Buying

HAVE you heard of the big changes made by the Illinois Wool Marketing Association in their expanded wool buying program for this spring? Here are three principal changes of interest to Illinois farmers:

1. Growers will receive advance checks within three days of the time their wool arrives at the new warehouse in Paris, Edgar county. This cash advance will amount to about 75 per cent of the market value of the wool.

2. Growers who sell their wool through the cooperative will be furnished wool bags and paper twine free of charge.

3. Warehousing, grading, and sale of wool will be handled centrally through the Paris warehouse. This should result in lower marketing costs and greater net returns to the grower.

The Wool Marketing Association has set a goal of one million pounds of wool. It needs this expanded volume to operate with the greatest efficiency. You can help put this program over by marketing your wool through your own statewide cooperative.

New American Dairy Association *Express*

TO SALES!

GOING places fa-a-st . . . these colorful, sales-pointed MILK messages! They're really "Special Delivery Billboards" — flashed to most of America's millions from the sides of more than 6,000 busy Railway Express trucks in month-long postings. Wherever there are people they are on the move — flashing a half million sales impressions every daylight hour, the industry's sales messages 180,000,000 times a month.

This exclusive and forceful American Dairy Association sales-making campaign is on the job rounding up business on MILK, BUTTER, CHEESE, ICE CREAM, and EVAPORATED MILK. It is but one of the American Dairy Association's long-range promotional siege-guns, which include magazines and newspapers, billboards and radio, research, trade tie-ins, fairs and special events. You're helped every day, in every way, by the American Dairy Association. This is your business-action program for "SALES — Not Surplus."

Illinois Farmers contribute to this program through their Producers' Dairy, Prairie Farms Creamery or Bargaining Association.

The program has the wholehearted support of your Illinois Milk Producers Association and Prairie Farms Creameries.

ILLINOIS MILK PRODUCERS ASSOCIATION AND PRAIRIE FARMS CREAMERIES

WHERE CAN WE FIND A DOCTOR?

★ ★ ★ ★ ★

LIST 20 COUNTIES WHERE STUDENTS WILL TAKE PRIORITY ON MEDICAL STUDENT LOAN FUND

FARM groups have been asking for the past 20 years with increasing frequency, "Where can we get a doctor to replace old Doc Jones?" The answer: farm communities must send one of their boys to medical school and make a doctor out of him with the expressed purpose of his returning to their area to practice. There is no way that any governmental agency, state or national, can furnish them a doctor they want, according to Dr. Harlan English, chairman of the rural medical service committee, Illinois State Medical Society.

The farmers must grow their own, Dr. English says. The same is true of nurses. If farm families are going to have nurses in their areas it will have to be their own daughters who take up nursing.

What about the future as viewed from 1948? You can't expect to keep your boys and girls who take up medicine and nursing "down on the farm" unless you build them a workshop; any more than you can farm today without reasonable tools and a good machine shop.

What is the workshop for your boys and girls in medicine? It is the 50 to 100 or 200-bed hospital that is serving your area or the one that you and the other folks about you vote to build and operate, says Dr. English.

While you are sending your boys and girls to professional schools, get in touch with your local Farm Bureau and find out what the hospital plans are for your community. The State Health Department has surveyed our state and advised, after adequate study, the location of various sized hospitals in various towns of the state. These hospital areas cross county lines and are set up for the maximum benefit of all Illinois citizens. Since one-third of construction costs, under this plan, must come from local sources, bonds will have to be voted in some places for building purposes. In others, a tax levy will be necessary to support them.

No group outside your own community can or will build and operate a hospital for your people, according to Dr. English. You can get state and federal aid for building, but, to operate a hospital, only the local community resources can be used.

The answer to the type of health facilities you want for your farm folk lies in your own hands, says Dr. English. You can't get something for nothing, he believes. You have to put your boys and girls in the medical service or you won't have a new "Doc Jones." City-bred doctors and nurses won't come to your rural towns.

If one of your boys or girls needs help — medically, scholastically, or in some cases financially — consult the president of your county medical society (ask any doctor, he can tell you who the local president is) or your County Farm Bureau.

The Illinois Agricultural Association and the Illinois State Medical Society have set up a medical student loan fund for boys in the 20 Illinois counties in the worst need of doctors, in an effort to show you how to help yourselves.

These 20 counties are: Calhoun, Johnson, Pulaski, Jasper, Schuyler, Fayette, Scott, Washington, Bond, Cumberland, Jo Daviess, Clark, Clay, Edwards, Hancock, Brown, Hardin, Effingham, Jersey and Pope.

Farm boys who have completed their college work in pre-medics, with good grades, and who are eligible, can borrow money from the loan board; but that is a program for the counties in direst medical need. The future country doctor lives on a farm today and is going to Blank Township High School. Farm families will have to educate their own, and equip their community so the boys and girls will be glad to come back home, concludes Dr. English.

Floyd E. Morris

Dr. Harlan English

Dr. English is chairman of the rural medical service committee of the Illinois State Medical Society. Floyd E. Morris, IAA vice-president, is chairman of the IAA medical committee.

IAA Annual Meeting To Be Held Nov. 15-18

The Illinois Agricultural Association will hold its 34th annual convention Nov. 15-18 at the Hotel Sherman in Chicago. The 1947 meeting was held in St. Louis.

AFBF To Meet In Atlantic City

The American Farm Bureau Federation will hold its annual meeting in Atlantic City, N. J., the week of Dec. 12-16. Many farm folks are interested in a travel tour to this meeting similar to the trip by chartered train taken by Illinoians to the AFBF San Francisco convention in 1946.

Ed Barnes has transferred as farm adviser from Richland to Macon county. A 1936 University of Illinois graduate and ag teacher at Bunker Hill and Herrin, Barnes has been in Richland county for about seven years.

Competition Demands High Quality Fruit

(*Continued from page* 18)

Illinois crop of 1½ million bushels compared with 2,168,000 bu. in 1945; 1,529,000 bu. in 1946; and 2,363,000 bu. in 1947.

More than 450,000 bushels of apples and peaches valued at more than a million dollars were handled by the Fruit Exchange in 1947, according to the manager's report. This was a higher volume than was handled in 1946. The exchange also handled vegetables, strawberries and miscellaneous units valued at nearly $160,000. The strawberry crop marketed was more than four times greater than the 1946 crop.

Speaking on the pest outlook for 1948, S. C. Chandler, state entomologist, said the carryover on scab was moderate to heavy; blight may be severe although weather may moderate it; codling moth is worse than a year ago; aphid eggs are scarcer; mites are spotty; and plum curculio and catface are both down half of what they were last year.

Nelson Cummins, Jefferson county, was elected to the board of directors of the Fruit Exchange to fill the unexpired term of Trevor Jeffries, Jefferson, who resigned to become a member of the staff of the Illinois Fruit Growers Exchange. Four other directors whose terms expired in March, were reelected. They are: R. B. Endicott, Pulaski; William Beauman, Johnson; Lyman Creed, Washington; Dr. L. A. Floyd, Bond.

Officers re-elected were President A. O. Eckert, St. Clair; Vice President E. D. McGuire, Jackson; and Secretary-Treasurer F. G. Anderson, Union.

Here's IAA Position On Margarine Issue

(*Continued from page* 6)

by any industry. Prices of most items purchased by farmers are affected by copyrights and patents and we feel the farmers are justly entitled to similar consideration and that the yellow color of butter is certainly of equal importance.

The passage of legislation imposing taxes on yellow oleomargarine by Congress was a recognition of the need to protect both the dairy industry and consumers against imitation and fraud. The need for this protection is no less today than it was when existing legislation was passed.

It is natural that attempts to remove taxes on yellow oleomargarine should come at a time when food prices are high and when many consumers are looking for cheaper substitutes. We appreciate this need and will not oppose the removal of tax discrimination. Such a change without provision for identification between the two products, however, would be definitely detrimental to our agricultural economy.

We believe that American consumers want to know what they are buying and eating, whether it be purchased at the grocery store or in a public eating place. We feel that the American consumer is entitled to have this information. We believe that deception and substitution without knowledge should be discouraged wherever possible.

Farmers Urged To Go Grade A Now

(*Continued from page* 12)

more and more emphasis on physical facilities — the milkhouse, barn, and water supply.

To produce Grade A milk the dairy herd must be healthy, and clean methods of milking must be followed.

The barn must have a water-tight floor, plenty of window light, a tight ceiling and white washed or painted walls. The cow yard must be graded, kept free of hogs and manure.

The milk house must be well drained and well lighted, with provisions for hot and cold water. It is advisable to have a mechanical cooler that will bring the temperature down to 50°F. one hour after milking. Both barn and milk house must have a safe water supply where no surface water is allowed to seep through the well casing.

Costs vary widely in remodeling to meet these requirements. A dairyman near Carbondale last year started from scratch. He built a milk house and 20-cow frame milking barn for $2700.

Few farmers need new milking barns and milk houses can be built at a cost of about $600. It depends a great deal on what the farmer has and what he wants.

Name 8 Advisers To IAA Committees

EIGHT Illinois Farm advisers have been named to serve on standing committees of the Illinois Agricultural Association during 1948.

Appointments were made by IAA President Charles B. Shuman on recommendation of L. E. McKinzie of Paris, Edgar county, president of the Illinois State Association of Farm Advisers.

Farm advisers named and the committees they will serve on are: H. N. Myers, DeWitt, public relations; R. V. Watson, Mason, marketing; J. B. Turner, Fayette, fertilizer quality control.

A. R. Kemp, Knox, and E. K. Walworth, Warren, veterinary medical relations; W. S. Myers, Coles, organization-information; W. C. Anderson, Jackson, feed quality control; H. R. Brunnemeyer, Winnebago, business service.

Prairie Farms Give Products "New Look"

(*Continued from page* 16)

The local Olney station, WVLN, carries a Prairie Farms program directed at consumers. Newspapers, movies, and point of sale advertising also are used.

The Olney creamery is pioneering in bottled milk and dairy products sales to consumers in 32 towns in its territory.

The entire program of the Prairie Farms Creameries throughout the state as typified by the plant at Olney—improving milk quality, installing new machinery, building wider markets—is designed to help dairy farmers get a better price for their milk.

This program is being transformed into reality through the cooperative efforts of the entire Prairie Farms family, with its 10 affiliated creameries, and its hundreds of farm members, working together toward a common goal.

Farm Bureau leaders at Vandalia are shown at an IAA short course in Farm Bureau organization and administration. It was one of several district meetings held under the direction of George E. Metzger (standing), IAA secretary of organization and information. Text for the course was a handbook prepared by Metzger.

WHERE CAN WE FIND A DOCTOR?

★ ★ ★ ★ ★

LIST 20 COUNTIES WHERE STUDENTS WILL TAKE PRIORITY ON MEDICAL STUDENT LOAN FUND

FARM groups have been asking for the past 20 years with increasing frequency, "Where can we get a doctor to replace old Doc Jones?" The answer: farm communities must send one of their boys to medical school and make a doctor out of him with the expressed purpose of his returning to their area to practice. There is no way that any governmental agency, state or national, can furnish them a doctor they want, according to Dr. Harlan English, chairman of the rural medical service committee, Illinois State Medical Society.

The farmers must grow their own, Dr. English says. The same is true of nurses. If farm families are going to have nurses in their areas it will have to be their own daughters who take up nursing.

What about the future as viewed from 1948. You can't expect to keep your boys and girls who take up medicine and nursing "down on the farm" unless you build them a workshop; any more than you can farm today without reasonable tools and a good machine shop.

What is the workshop for your boys and girls in medicine? It is the 50 to 100 or 200-bed hospital that is serving your area or the one that you and the other folks about you vote to build and operate, says Dr. English.

While you are sending your boys and girls to professional schools, get in touch with your local Farm Bureau and find out what the hospital plans are for your community. The State Health Department has surveyed our state and advised, after adequate study, the location of various sized hospitals in various towns of the state. These hospital areas cross county lines and are set up for the maximum benefit of all Illinois citizens. Since one-third of construction costs for this plan must come from local sources, funds will have to be voted in some cases for building purposes. In others a tax levy will be necessary to support them.

No group outside your own community can or will build and operate a hospital for your people, according to Dr. English. You can get state and federal aid for building but, to operate a hospital, only the local community resources can be used.

(*Continued from page 12*)

more and more emphasis on physical facilities — the milkhouse, barn, and water supply.

To produce Grade A milk the dairy herd must be healthy, and clean methods of milking must be followed.

The barn must have a water-tight floor, plenty of window light, a tight ceiling and white washed or painted walls. The cow yard must be graded, kept free of hogs and manure.

The milk house must be well drained and well lighted, with provisions for hot and cold water. It is advisable to have a mechanical cooler that will bring the temperature down to 50° F. one hour after milking. Both barn and milk house must have a safe water supply where no surface water is allowed to seep through the well casing.

Costs vary widely in remodeling to meet these requirements. A dairyman near Carbondale last year started from scratch. He built a milk house and 20 cow frame milking barn for $2700.

Few farmers need new milking barns and milk houses can be built at a cost of about $600. It depends a great deal on what the farmer has and what he wants.

Name 8 Advisers To IAA Committees

EIGHT Illinois Farm advisers have been named to serve on standing committees of the Illinois Agricultural Association during 1948.

Appointments were made by IAA President Charles B. Shuman on recommendation of L. E. McKinzie of Paris, Edgar county, president of the Illinois State Association of Farm Advisers.

Farm advisers named and the committees they will serve on are: H. N. Myers, DeWitt, public relations; R. V. Watson, Mason, marketing; I. B. Turner, Fayette, fertilizer quality control.

A. R. Kemp, Knox, and F. K. Walworth, Warren, veterinary medical relations; W. S. Myers, Coles, organization information; W. C. Anderson, Jackson, feed quality control; H. R. Brinkmeyer, Winnebago, business service.

Prairie Farms Give Products "New Look"

(*Continued from page 10*)

The local Olney station, WVLN carries a Prairie Farms program directed at consumers. Newspapers, movies, and point of sale advertising also are used.

The Olney creamery is pioneering in bottled milk and dairy products sales to consumers in 32 towns in its territory.

The entire program of the Prairie Farms Creameries throughout the state as typified by the plant at Olney, improving milk quality, installing new machinery, building wider markets is designed to help dairy farmers get a better price for their milk.

This program is being transformed into reality through the cooperative efforts of the entire Prairie Farms family and its 10 affiliated creameries, and its hundreds of farm members, working together toward a common goal.

Farm Bureau leaders at Vandalia are shown at an IAA short course in Farm Bureau organization and administration. It was one of several district meetings held under the direction of George E. Metzger (standing), IAA secretary of organization and information. Text for the course was a handbook prepared by Metzger.

PATRICK HENRY, of "Give me liberty or give me death" fame, heartily advocated independence from England and just as vigorously opposed the union of the colonies under our present constitution. It took all the persuasion of John Marshall to persuade Virginia to adopt the constitution and become a part of a stronger union.

Judge James Winthrop, prominent lawyer of Cambridge, Mass., later a judge, violently opposed the union of the colonies as proposed under our federal constitution and tried to prevent Massachusetts' acceptance of it.

In one of the "Agrippa" letters he said, "It is impossible for one code of laws to suit Georgia and Massachusetts. . . . . The idea of an uncompounded republic . . . all reduced to the same standard of morals, of habits, and of laws, is in itself an absurdity, and contrary to the whole experience of mankind."

Doubts and Misgivings

No worthwhile change or progress has been made that was not attended with some doubts and misgivings as to the future effects of such steps. However, no progress would be possible if we did not have courage to trust the future and faith that our fellowman would help us to guard the progress that has been made. In arriving at some of the decisions we have to make today in regard to the establishment of a larger school district, perhaps we should adopt the philosophy of Benjamin Franklin, which he so well expressed in his appeal to the members of the Constitutional Convention to sign the document. The question here was, "Shall we go our several ways in impotence or combine our resources in strength for the good of all?" On this very important question, Franklin said:

By JOHN COX
IAA Director of Rural School Relations

"I confess that there are several parts of this Constitution which I do not at present approve, but I am not sure I shall never approve them. For having lived long, I have experienced many instances of being obliged by better information, or fuller consideration, to change opinions even in important subjects, which I once thought right, but found to be otherwise. It is therefore that, the older I grow, the more apt I am to doubt my own judgment, and to pay more respect to the judgment of others. Most men, indeed, as well as most sects in religion, think themselves in possession of all truth, and that wherever others differ from them, their own infallibility, few express it so naturally as a certain French lady, who, in a dispute with her sister, said, 'I don't know how it happens, sister, but I meet with nobody but myself, that is always in the right.'

Cannot Expect Perfection

"In these sentiments, sir, I agree to this Constitution with all its faults, if they are such. I doubt, too, whether any other Convention we can obtain may be able to make a better Constitution. For when you assemble a number of men to have the advantage of their joint wisdom, you inevitably assemble with those men all their prejudices, their passions, their errors of opinion, their local interests and their selfish views. From such an assembly can a perfect production be expected? It therefore astonishes me, sir, to find this system approaching so near to perfection as it does. Thus, I consent, sir, to this Constitution, because I expect no better, and because I am not sure, that it is not the best. If every one of us, in returning to our constituents, were to report the objections he has had to it, and endeavor to gain partisans in support to them, we might prevent its being generally received, and thereby lose all the salutary effects and great advantages resulting naturally in our favor, from our real or apparent unanimity.

"On the whole, sir, I cannot help expressing a wish that every member of the Convention who may still have objections to it, would with me, on this occasion, doubt a little of his own infallibility, and to make manifest our unanimity, put his name to this instrument."

COUNTRY MUTUAL CASUALTY COMPANY policies offer you liability protection against the endless risks of farming — runaway horses, cross bulls, weak ladders, power machinery, high climbing, heavy lifting, sharp tools and a hundred and one other sources of serious injury or death. As an *employer* and *property owner* you may be liable for injuries sustained by your hired hands on the job and by strangers on your premises. 25,641 farmers are now protected under our Farmers General & Employers Liability Policies. See your Country Mutual Casualty representative today at your Farm Bureau office and learn how little it costs to be protected.

NEWS and VIEWS

Color Films On Cancer Now Available To County Groups

If you want to help in the fight against the dread enemy — cancer — two splendid educational films are available through the Illinois Agricultural Association film library.

If you are interested, see your county Farm Bureau, or write to the IAA Publicity Department, 43 East Ohio Street, Chicago 11, Ill.

The films are "The Traitor Within," a 10-minute color animated picture, and "Time is Life," a 15-minute movie.

For your information it is also well to know that Cancer clinics are maintained throughout Illinois and are free except in cases involving extensive medical attention or laboratory and X-ray tests. Patients can enter only after they have been referred to the clinic by a physician.

Clinics are located in the following hospitals: Passavant Memorial, Jacksonville; Burnham City Hospital, Champaign; St. Anthony's, Rockford; Graham Hospital, Canton.

Methodist Hospital, Peoria; Savanna City Hospital, Savanna; Springfield Memorial, Springfield; Christian Welfare, E. St. Louis; Sherman Hospital, Elgin; St. Francis, Evanston; Herrin Hospital, Herrin; Ryburn Memorial, Ottawa, McLean County Cancer Clinic, Bloomington.

SEQUIN-DOTTED BLOUSE

Hand crochet for novelty — white for flattery — sequins for glamour — these three ingredients are in keeping with fashion dictates of the season. White wool yarn is crocheted in an openwork stitch to make this youthful date blouse. A sprinkling of large sequins decorate both front and back. For free instructions send a stamped, self-addressed envelope to Women's Editor, Illinois Agricultural Association Record, 608 South Dearborn, Chicago 5, Ill.

NEW HOME ADVISERS

Mrs. Ruth Thornley Skaggs is the home adviser for the newly organized Sangamon County Home Bureau. A graduate of Illinois State Normal University, Mrs. Skaggs has taught at Northern Illinois State Teachers College, worked as home management supervisor for FSA, and as demonstrator for the International Harvester Company.

Miss Alfretta Dickinson, Moline, started work as Winnebago county home adviser recently. A graduate of Rockford College, she has taught home economics in the Rockford public schools.

CHEESE CUSTARD

2 cups cottage cheese
2 cups milks
½ cup sugar
¼ teaspoon salt
3 eggs, well beaten
Grated rind 1 lemon
1 teaspoon vanilla
Cinnamon

Combine cheese and milk; add remaining ingredients, with the exception of cinnamon. Pour the mixture into buttered custard cups or baking dish, sprinkle wih cinnamon, set in a pan of hot water and make in a moderate oven (350°) until the custard is set—about 45 minutes.

SPAGHETTI CUSTARD WITH PEAS AND EGGS IN CHEESE SAUCE

1 tblsp. salt
3 quarts boiling water
6 ounces elbow spaghetti
1 tblsp. melted butter
1½ teasp. salt
½ cup milk
3 eggs, beaten
2 cups medium white sauce
½ teasp. dry mustard
2 diced, hard-cooked eggs
1 cup cooked peas
½ cup grated cheese
2 tblsp. chopped pimiento

Add one tablespoon salt to actively boiling water. Gradually add spaghetti and continue boiling until spaghetti is tender, about seven minutes. Drain and rinse spaghetti. While spaghetti is cooking, combine melted butter, salt, milk and eggs. Fold in spaghetti. Pour into greased 8 x 8-inch pan or 9-inch round pan. Bake in moderate oven (350° F.) about 35 minutes. While custard is baking, combine white sauce, mustard, eggs, peas, cheese and pimiento. Heat thoroughly. Serve spaghetti custard cut in squares if baked in square pan, or wedges if baked in round pan, topped with peas and eggs in cheese sauce. Yield: 4 servings.

This accessory twosome is proportioned to the new fashion formula — hat, small and close-fitting; bag, large and roomy. Both hat and bag are made of curved rows of single crochet, a simple stitch even for a beginner. Black and gold paillettes add a touch of sparkle to both hat and bag. In wool yarn, these accessories are right for fall and winter. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street.

for HOMEMAKERS

CROCHETED SLIPPERS

Every man needs at least one pair of soft slippers for lounging in comfort. To crochet these masculine slippers use durable rug yarn in wine or brown or some other mannish hue. The soles are crocheted over inner soles. Some men prefer scuffs so directions for crocheting a pair of scuffs is included in the instruction leaflet. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

Here's How To Keep Your Vacuum Clean

"One of the main rules for keeping a vacuum cleaner in good condition is to use it according to the manufacturer's directions," says Miss Gladys Ward, home management specialist, University of Illinois College of Agriculture. But Miss Ward also has some rules of her own which can add life to this valuable piece of cleaning equipment.

First, pick up pins, string or thread from the floor before using the vacuum, and keep the brush free from hair.

Second, empty the bag frequently, preferably after each use. In any case, never let it become more than one-third full. Rub or brush the inside often, but do not wash it.

In her leaflet, "Consumer Information on Vacuum Cleaners," Miss Ward also gives suggestions for selecting a new vacuum cleaner. A copy of the leaflet may be obtained by sending a request to the University of Illinois College of Agriculture, Urbana, Illinois. Ask for leaflet HEE3432.

Home Adviser Congratulated On Anniversary

MISS MARGARET E. WALBRIDGE is receiving the congratulations of her friends on the completion of her 10th year as home adviser of the Adams County Home Bureau. Under her capable supervision, Home Bureau has grown from 14 units with 266 members to 29 units with 673 members.

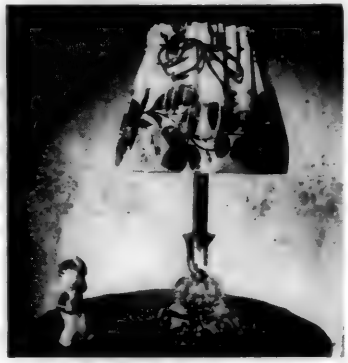
Membership in home economics 4-H Clubs has grown from 236 members to 470 during the past ten years.

During the month of February the Home Bureau in cooperation with Public Health Nurses offered a lesson on first aid and child care.

Kendall Choruses Rank High in State

The Kendall county Farm and Home Bureau people are proud of the fine performance of two choral groups who were among the top six winners in the final contest of the music and drama festival held in Urbana in February. The groups are boys quartette and 4-H girls double trio. Members of the quartette are: Gerald Finnestad, Maurice Lane, Russell Walker, and James Norem. The girls of the double trio are: Marple Rae Trotter, Betty Kiltz, Bonnie Masat, Barbara Bendel, Renee Doderlein, and Dorose Zink.

Lampshade Slipcovers



Are your lampshades soiled, worn or faded? Slipcover them with fabric. A strawberry print chintz was used for this small lampshade and gathered to fit at the top. It can be readily removed for laundering. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

Mothers Want Clothes For Children's Needs

Miss Edna Gray, College of Agriculture clothing expert, says a better understanding is sorely needed between long-suffering mothers and makers of children's clothing.

"Many mothers would be willing to pay more for clothes designed to meet children's needs," Miss Gray believes.

Mrs. Ed Hugo, Clinton county, demonstrates the correct technique in handling pastry dough at a meeting of the Hoffman Home Bureau unit.

Championship

IN THE MAKING

Blue Seal Feeds make outstanding records for users. Mr. Walter Schlichting of Apple River, Illinois, confirms this statement. He has been showing prize-winners at the International Livestock Show since 1929 and last year walked off with the coveted GRAND CHAMPION award on a prize carload of 237-lb. Poland China barrows. These hogs were just over six months of age and had been fed on Blue Seal Supplements and farm grains. "Never have I seen my hogs do better" stated Mr. Schlichting, who is now looking over more choice gilts in his breeding herd with another championship in mind. Thousands of successful hog-men in Illinois follow his example for profits with the Blue Seal Swine Feeding System.

PROTECT YOUR GROWING CROPS

FROM HAIL LOSS WITH THIS LOW COST INSURANCE

We have all seen this sad picture at least once — a field of deep green corn, the prettiest sight on earth one day, and the next, the same tender crop standing lifeless, cut to ribbons by hail. So far maybe it has always happened to the other fellow — a neighbor, or a farmer in the next township. BUT, it CAN HAPPEN TO YOU, and within the next few months. So don't take a chance!

Low cost hail insurance gives real coverage. It protects expensive growing crops from the constant hazard of hail damage, and gives you peace of mind when storm clouds gather. Today, with grain prices at a profitable level, and operating costs high, don't get caught with a serious loss. See your Country Mutual Fire representative today and take out your hail policy.

Hail represents a big threat to farm profits. Don't get caught without insurance.

...ut the FARMER'S DAUGHTER

...and 150,000 Guardians of the Future

This young lady seems little concerned about her future. Nor need she be. A bright future, a secure future is assured her by the 150,000 Illinois Farm Bureau members who are vigilantly guarding the fortunes of agriculture, and thus guaranteeing the security and happiness of their children.

These Farm Bureau members think of themselves mainly as good farmers — actually they are *salesmen,* too — selling their children, their neighbors, their legislators on the needs, the problems, the importance, the great contributions of agriculture. Through their Farm Bureau, these farmers have a powerful voice in shaping any and all policies affecting agriculture.

WHEN READY CASH MEANS SO MUCH

When the head of the family is taken from us, the many things to be done demand ready cash right away. Doctor bills, hospital costs, funeral expenses — all requiring prompt payment.

Everyone should have at least one Country Life policy earmarked to meet last expenses. Everyone can afford to make things easier for HER at the time she needs comfort most. It's the "right move" at any age to make this protection available . . . if something SHOULD happen to you.

Whether you carry much life insurance, or very little, the ready cash from this one policy — immediately available for last expenses — will carry your loved ones through this time of trial. Your friendly Country Life representative can advise you on the amount best suited to your family's needs.

Country Life

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

MAN WITH A HOE

By President Charles B. Shuman

SEVERAL years ago a friend gave me a reproduction of the great painting, "Man With A Hoe." Today, it serves to remind us that agricultural progress through the centuries can be measured by the extent to which we have applied more efficient power to the hoe. During the pioneer days of our own America, the sweat and sinew of many men equipped with hand tools was required to produce enough food to feed one city family.

The birth of our present great industrial empire was in large part due to the release of millions of men from agricultural labor by the increased use of the draft horse as a source of power to pull more efficient farm tools. For several generations the chief source of agricultural power was the farm grown corn, oats and hay that old Dobbin converted into useful energy.

Today we have practically completed the transition to a new and more efficient source of power for the "hoes" of agriculture. Millions of farm tractors and trucks have made a wonderful contribution to the efficiency and progress of agriculture, but they have also helped create new problems. . . . A tractor won't eat oats!

The present petroleum shortage offers a serious threat to Illinois farmers in their efforts to maintain abundant production in 1948. What are the facts? The oil industry is operating at capacity and is expanding as rapidly as short supplies of steel will permit. However, the consumption of petroleum products has increased at a much faster rate than production. Farm use of gasoline has doubled in the past seven years. Our own Illinois Farm Supply Company and its County Service Company members now supply more than half of the farm tractors of the state with fuel. The 190,000,000 gallon annual petroleum needs of this, your own company, represents the greatest single concentration of rural business in the world. When supplies are short and conditions difficult, other oil suppliers can and do abandon certain areas of rural service. This practice throws additional demands upon your local Service Company.

I am sure that in the months ahead, Illinois farmers will have occasion to appreciate the prompt action taken by the leadership of their own cooperative in its all-out efforts to secure needed supplies of fuels for farming. The Farm Bureau members of Illinois are responding magnificently to the call for needed additional capital funds. The thirty-five million gallon Pana refinery is now a part of your organization and is helping meet your needs.

Despite all of these actions, your tractor may be stopped for want of fuel unless all Illinois farmers cooperate to eliminate unnecessary use or wastage of tractor fuel. You can help by eliminating all possible extra field operations, by adjusting motors for maximum efficiency, by reducing idling or traveling time — in short, by doing everything possible to conserve fuels for farming.

May the "man with the hoe" stay in the picture over the mantel and may the horses continue to fatten in the hill pasture while Illinois tractors hum on through the night.

This ugly scar across the face of an Illinois farm wasn't caused by nature. Nature protects the land from things like this. It was caused by Man, Man the squanderer, Man the careless. Instead of being a valuable heritage, eroded fields like these are a curse to the next generation. Here some of tomorrow's farmers try to do something about it by planting trees to hold together what soil there is left.

By LEW REISNER,

Field Editor, Illinois Agricultural Association RECORD

"They have sown the wind, and they shall reap the whirlwind." — *Hosea,* 8:7.

NATURE'S forces of wind and rain have reaped their toll in erosion and waste on farms where man has taken for generation upon generation, returning nothing to the soil. One such farm laid waste is the old Cooper place along Highway 50, two miles east of Carlyle. Fifty years ago it was one of the best farms east of the Waskaskia river in Clinton county.

Now the soil is barren. Only broom sage, a worthless weed, will grow. Gulleys deep enough to hide a two-story house have clawed their way up gently sloping hillsides.

But this spring after 40 years of neglect these gulleys felt a new force at work. Farm kids from neighboring country schools were scrambling up and down gulley banks, planting trees.

They planted black locust and loblolly pine to help stop erosion. The children were the first to work on a country-wide project to make this abandoned farm produce abundantly as it had a century ago.

This farm, the old Cooper place, changed hands this spring. The new owner agreed to allow the 160-acre farm to be used as a project to show how erosion can be checked and soil fertility restored.

The work will be done entirely by farm families in the county. The tools used will be only those tools found on any Clinton county farm.

"We want to prove that each farmer can save his soil with just the tools he has on hand," Floyd Smith, farm adviser explained. "This is going to be for and by farmers. Not a spectacular and expensive show where a big farm is terraced and contoured in a single day."

The farmers who help with the project will work under the direction of the Clinton County Farm Bureau, the district Soil Conservation Service at Mt. Vernon and the University of Illinois.

The tree planting this spring was confined to 20 acres of the deepest gulleys. Next Aug. 4 the rest of the farm, comprising the work land, will be contoured and terraced and grass waterways built.

During the Aug. 4 demonstration any farmer who cares to try his hand can help with the terraces. Three will be built nearest the road. The rest of the work land will be contoured for strip cropping.

Before fall the soil will be tested and fertilized as needed. Farm Adviser Smith estimated the land will need five tons of lime, 1200 pounds of raw rock phosphate, and 380 pounds of 50 per cent potash. This will cost about

Extension Forester W. F. Bulkley, Champaign, shows serious minded school kids best way to plant loblolly pine seedlings. Tree planting was held this spring on farm where Clinton County Farm Bureau will hold soil conservation field day this fall.

$37 an acre at current prices.

After the terraces have been built this fall, the work land will be planted to wheat and seeded to sweet clover. Later the sweet clover will be plowed under as a green manure crop and the fields planted back to wheat.

This wheat, sweet clover, wheat, sweet clover, and later a pasture mixture, will bring the soil back quicker than any other way we know, Gene Steely, district soil conservation expert, explained during the spring tree planting project.

He estimates that the land should be turning out bumper corn crops after about 10 years, depending somewhat on how often the legume seedings catch.

After this year the project will be continued by the farm operator, John Issak, who will farm the land along with the farm he is now on, both owned by Oscar Neirmann, of Centralia.

The fertilizer will be applied when possible as straight stuff and in heavy doses as needed. And it will be about the first the old Cooper farm has ever seen — at least in doses that will help restore its fertility.

Matt Diekemper, 59, a Clinton county farmer and member of the soil conservation board, was reared on a farm adjacent to the Cooper place.

His memory carries him back 50 years ago when he used to play and hunt over the ground now so deeply gullied.

"There were no ditches here then," he recalled. "The neighbors used to farm straight through the place where this gulley now stands.

"But even when I was a kid it was rented and owned by folks who lived away from here — St. Louis, I believe. The ditches must have started about 40 years ago."

Diekemper says the soil on the old Cooper place was rich in its virgin state. "When my father threshed here 45 years ago this was the farm that always broke the record for a day's run.

Last year the corn crop was a complete failure. Only nubbins grew, the size of a man's thumb.

But neighbors have faith that the farm can be brought back. Sam Siddell's place lies across the highway and his contoured fields are as productive and well-cared as a garden.

Sam helped to plant the trees this spring. He'll help with the terracing this fall. From his own experience Sam knows what modern soil saving practices can do. He has faith that gulleys will heal and old Cooper farm will bloom again.

GOUGLER RECEIVES FIRST IAA

Retirement Certificate

By GEORGE E. METZGER, Secretary
Organization and Information

FIRST certificate to draw benefits under the Illinois Agricultural Association employees' retirement plan went to Frank A. Gougler of the marketing department. Gougler was automatically retired as of March 31. His first retirement check was attached to the certificate.

Throughout his life Mr. Gougler has been a hardworking man. He worked his way through school from the very beginning and wound up with a doctor's degree from the University of Illinois.

He has been employed by the Illinois Agricultural Association for 24 years. He first gained recognition in Illinois through some outstanding work as county agricultural agent in Missouri. When Adams county, Illinois, needed a new agent, they went over to Missouri and hired Gougler. He was Farm Adviser in Adams county for four years.

At the end of that time, Gougler had an inborn desire for a higher education and went to the University of Illinois where he worked on his doctor of philosophy degree. During his studies at the University of Illinois, he did part-time work for the Illinois Agricultural Association on produce marketing. When he had completed his studies he came to work full-time for the IAA.

His first activity was an effort to study and improve, if possible, the marketing of farm produce, chiefly butterfat and eggs. Farm leaders used to say of Gougler that he could go out in the state, hold a meeting in some county seat, and raise the price of eggs and butterfat two to three cents a pound the next morning.

Gougler became actively identified in the organization of cream pools. His program was to approach a group of butterfat producers through the Farm Bureau and set up a cream pool for the assembling and marketing of butterfat.

He used to tell the farmers that an organization covering about 600 cows, with a few dollars worth of equipment, was about all that was necessary to enter the cream and butterfat marketing project. At one time, approximately three million pounds of butterfat were under contract and were being marketed through these cream pools.

Frank Gougler (left), veteran of 24 years of marketing work with the IAA, is bid goodbye on his retirement by George E. Metzger, IAA field secretary. Metzger is presenting Gougler with a camera given by his fellow employees and the first pension certificate under the IAA's new employee retirement plan.

The philosophy back of the early cream pool program was that the farmers could assemble the cream more cheaply than could the processors and could carry on a better educational program for quality improvement. This was rather clearly demonstrated through the activities of the cream pools.

The butterfat assembled in these cream pools was sold to processors then in existence by a marketing committee. It worked well for a couple of years. Finally the large processors all began to bid the same price.

An effort was then made to sell the processors the product at a given price, and a contract was written under which the cream producers would share in the profits of the butter made from pooled cream on a 50-50 basis. This did not work long, because most of the larger creameries insisted they had no profits. A few of the smaller ones did divide some profits.

Soon it became apparent that if butterfat producers in Illinois were going to get the most out of their butterfat, they would have to own their own processing plants. The result was the 10 creamery chain now owned by butterfat producers in Illinois. The average increase in price received by the butterfat producers was about five cents per pound over the old methods.

(*Continued on page* 34)

This ugly scar across the face of an Illinois farm wasn't caused by nature. Nature protects the land from things like this. It was caused by Man, Man the squanderer, Man the careless. Instead of being a valuable heritage, eroded fields like these are a curse to the next generation. Here some of tomorrow's farmers try to do something about it by planting trees to hold together what soil there is left.

By LEW REISNER,

Field Editor, Illinois Agricultural Association RECORD

"They have sown the wind, and they shall reap the whirlwind." — Hosea. 8:7.

NATURE'S forces of wind and rain have reaped their toll in erosion and waste on farms where man has taken for generation upon generation, returning nothing to the soil. One such farm laid waste is the old Cooper place along Highway 50, two miles east of Carlyle. Fifty years ago it was one of the best farms east of the Waskaskia river in Clinton county.

Now the soil is barren. Only broom sage, a worthless weed, will grow. Gulleys deep enough to hide a two-story house have clawed their way up gently sloping hillsides.

But this spring after 40 years of neglect these gulleys felt a new force at work. Farm kids from neighboring country schools were scrambling up and down gulley banks, planting trees.

They planted black locust and loblolly pine to help stop erosion. The children were the first to work on a country-wide project to make this abandoned farm produce abundantly as it had a century ago.

This farm, the old Cooper place, changed hands this spring. The new owner agreed to allow the 160-acre farm to be used as a project to show how erosion can be checked and soil fertility restored.

The work will be done entirely by farm families in the county. The tools used will be only those tools found on any Clinton county farm.

"We want to prove that each farmer can save his soil with just the tools he has on hand," Floyd Smith, farm adviser explained. "This is going to be for and by farmers. Not a spectacular and expensive show where a big farm is terraced and contoured in a single day."

The farmers who help with the project will work under the direction of the Clinton County Farm Bureau, the district Soil Conservation Service at Mt. Vernon and the University of Illinois.

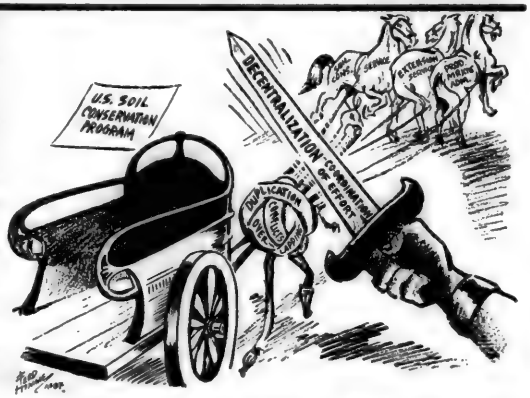
CO-OPS PL



Cartoon illustrates provision of Aiken bill emphasized by President Shuman at Springfield calling for "reorganization and decentralization of the functions of the department of agriculture" (see story). Below: Farm Bureau leaders pack meeting to doors.

RECENT and further capital expansion by farm cooperatives affiliated with the Illinois Agricultural Association will require the outlay of $5 to $6 million.

This was announced by George E. Metzger, IAA secretary of organization and information, during the annual spring Farm Bureau leaders' meeting held April 1 in Springfield.

Metzger pointed out that the Illinois Farm Supply Company recently sold $3,500,000 worth of additional stock, principally for the purchase of refineries and oil reserves, and that the Prairie Farms Creameries will need a minimum of $1,045,000 additional capital for new equipment and the construction of a creamery. He said further that the Illinois Cooperative Locker Service will need a million dollars in additional capital to keep pace with the growing demands for cold storage locker service throughout the state.

Metzger's request for support of these IAA affiliates in their appeals for funds was one of many topics discussed at the meeting in Springfield attended by 1500 Farm Bureau leaders.

Other topics included the state road survey committee, (See roads story on page 13) the medical student loan fund, long-range farm legislation, production of triple superphosphate by blast furnace, the economic study committee report, the shortage of petroleum products for the farm, the fly eradication program, the new wool marketing program, progress of school reorganization, the butter-margarine controversy, voting in the April primaries, and the livestock marketing field service.

Commenting on the need for additional capital among growing IAA associated companies, President Charles B. Shuman asked that Farm Bureau leaders make sure that their co-ops are adequately financed and in a strong position. "Many of the co-ops have been growing so fast, he said, that they are getting beyond their capital limitations. It is time to put our finances in order. Business difficulties may come, not in months but in days, he warned. Let's prepare to weather any storm."

Speaking on the Aiken bill, a long-range farm program bill recently introduced and scheduled for hearings in April, President Shuman said the IAA supported the principle of the bill which provides for a flexible support price formula based on the supply of basic commodities.

Under the Aiken measure, President Shuman explained, price supports would range from 60 to 90 per cent of parity. Supports would be lower when supplies of basic commodities were above "normal" and higher when supplies fell below normal. They would tend to level off at 75 per cent of parity in time of normal supply.

The IAA also is supporting a provision of the Aiken bill which would permit the use of a 10-year moving average as a base period for computing parity prices, or the 1909-14 period, which ever would be higher. The present period used in computing parity prices is the 1909-14 period.

The IAA, President Shuman said, is supporting provisions of the Aiken bill providing for the reorganization and decentralization of the functions of the department of agriculture.

"Farmers in Illinois believe," President Shuman said, "that the local administration of the various programs of the department of agriculture should be carried on under the direction of proper agencies within the state and not by centralized agencies in Washington."

Shuman said also that the IAA was backing the proposal to be introduced into Congress for the erection of a commerical size experimental plant for the production of triple superphosphate by the blast furnace method. "The blast furnace method," Shuman said, "has been proven scientifically, but as yet no private company has ventured to try it on a large commercial scale."

Support for Farm Bureau's new wool marketing plan was urged by L. L. Colvis, IAA secretary of marketing. Colvis pointed out that 3½ million pounds of wool are grown each year in Illinois. We need one million pounds of that, he said, to operate efficiently. Colvis said the co-op had paid an average price last year of 44 cents per pound while other buyers paid an average of 35 cents. President Shuman said that year after year the returns to farmers under the wool marketing program have been as great as the returns from our other marketing co-operatives.

PLAN NEW EXPANSION

PRESIDENT SHUMAN OUTLINES NEW LONG-RANGE FARM BILL AT SPRINGFIELD MEETING

IAA BACKS AIKEN BILL PRINCIPLE OF FLEXIBLE PRICE SUPPORTS

(See story on page 10) which is now getting underway in Illinois and will be carried out during the summer with the cooperation of the IAA, county Farm Bureaus, University of Illinois, the Natural History Survey, and the Illinois State Department of Health.

"The fly eradication program is one of the best our organization has sponsored," President Shuman said. "Like the medical student loan fund program, it has good public relations value.

C. H. Becker, manager of Illinois Farm Supply Company, warned Farm Bureau leaders that a critical shortage of gasoline is imminent. He urged farmers to keep their tanks full and conserve their supply. Use the tank gas for farm purposes only, he said.

Thirty million gallons of fuels expected from the Pana Refinery recently purchased by Illinois Farm Supply is expected to help ease the shortage. However, we will still be short 20 million gallons we could use, he warned.

I. E. Parett, secretary of general services, speaking on the medical student loan fund being sponsored jointly by the IAA and the Illinois Medical Society, announced that applications for the funds will be given priority from 20 Illinois counties where the need for doctors is greatest. The counties are: Calhoun, Johnson, Pulaski, Jasper, Schuyler, Fayette, Scott, Washington, Bond, Cumberland, Jo Daviess, Clark, Clay, Edwards, Hancock, Brown, Hardin, Effingham, Jersey, and Pope.

A question on legal limitations in the use of school funds is asked by D. H. Cuppy of Douglas county.

Asked to comment on the progress of rural school reorganization, John K. Cox, director of the IAA rural school relations department, said it still needed enlightened aggressive leadership. "Five years from now," Cox said, "I believe we shall be proud of the leadership Farm Bureau people have given to school reorganization. We are being given a great deal of credit for the school reorganization program to the point that if things go wrong we may have to shoulder the blame. So let's go all out for the type of reorganization that gives us the most and the best for the money."

IAA Director Homer Curtiss presented the IAA position on the current butter-margarine controversy in which he explained that the IAA "will not oppose the removal of the taxes on oleomargarine, provided some other means of preserving the identification as between the two products is developed."

President Shuman said he felt that the IAA stand might not be quite satisfactory to soybean oil men but he hoped that when Illinois dairymen and soybean oil men got together they would be able to work out a solution on the butter-margarine controversy satisfactory to both groups.

THE reconstructed Rutledge Tavern at New Salem State Park is the 12th in our series of historical and picturesque Illinois scenes. It was here that Lincoln first met and loved golden-haired Ann Rutledge. The Tavern was the first building at New Salem and was built by James Rutledge, father of Ann, in 1828.

Rutledge built the Tavern or lodging house (no liquor was sold) to accommodate men working on the mill he was building nearby on the Sangamon river. Floating downstream to New Orleans, young Lincoln's flat boat stranded on the dam. He stayed at the Tavern until it could be refloated. Taking a liking to the village, Lincoln returned to New Salem and the courtship of Ann Rutledge.

Babcock in his "Soul of Ann Rutledge," quotes Lincoln as saying on Thanksgiving Day in 1834: "There are all sorts of Thanksgivings and all sorts of things to be thankful for. But there will never be another one like this, for I have asked Ann Rutledge, the sweetest girl in all the world, to be my wife, and she has done me the honor of giving me her promise."

James Rutledge sold the Tavern and mill and moved to a farm 5½ miles north of New Salem where Ann died during an epidemic in 1835. Lincoln was at her bedside and was profoundly shocked. Reconstruction of the village was begun in 1932 and now includes cabins, stores, shops, the tavern, and the school and church cabin. Buildings are furnished with authentic early 19th century furniture and utensils. The village is a mecca for Lincoln scholars and admirers from throughout the nation.

David Biggs, Jackson county, last year's Sports Festival watermelon eating champion, chomps a final mouthful.

are you READY for the SPORTS FESTIVAL ?

ABOUT the time this issue of the RECORD reaches you, your county should be pretty-well settled on the type of Sports Festival program it is planning to participate in at Champaign-Urbana Aug. 26-27.

So if you haven't already advised your Farm Bureau of the sports events you would like to enter next August, you had better do so this month. By helping your own Farm Bureau get organized on its participation schedule, you will make it much easier for the men in charge of the Illinois Farm Sports Festival to do a better job on a bigger and better show Aug. 26-27.

Changes in sport and music events of the ninth annual Sports Festival have been announced by Roy Johnson, IAA secretary of special services, following a recent meeting in Chicago of the statewide festival committee.

All bowling and several softball classes will be held on a district elimination basis, Johnson said. The district champions will then go on to the state Sports Festival to be held at Champaign-Urbana Aug. 26-27.

District bowling contests are in progress now and most districts will be finished by May 15. District play will be held in 4-H, Rural Youth, and all-county division of softball throughout the summer with the number entering the state Sports Festival limited to 32 teams.

In the girls open and 4-H classes, and the men's over 35-ers, the number of teams entering the state contest will be limited to 16 but district play will not be held unless total entries exceed this number.

This year at the state Sports Festival contest a trophy will be awarded the winning county. Trophies will also be awarded the county highest in sports events and the county highest in folk events.

Johnson said that in addition to these awards, the county with the greatest number of points in each of the 16 districts will be given a district championship trophy.

All class A entries in the district folk festival contests will take part in the state folk festival contests in Champaign-Urbana. District folk festival contests will be under the direction of E. H. Regnier of the University of Illinois.

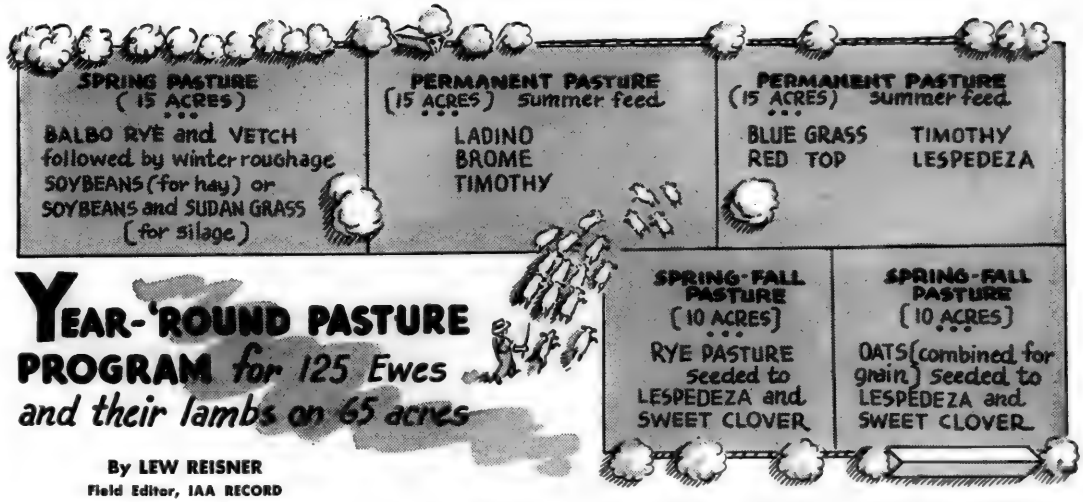
Other changes this year include separate classes for 4-H, Rural Youth, and an open division in square and folk dancing.

Men's classes have been added in chair quoits, clock golf, shuffle board, table tennis, and dart throwing. These events have been limited to women.

Track events for boys and girls have been reduced to: 50 yard dash, 8 pound shot put, high and broad jump for boys under 16; 100 yard dash for boys 16 and older; and 50 yard dash, and high and broad jump for girls under 16.

In the folk festival all solo numbers have been eliminated with the exception of the community song leader and ballad singer. County bands, adult and junior vocal groups, and a class for 4-H chorus groups have been added.

Illinois has been divided into the above 16 districts for the 1948 annual Farm Sports Festival. They will be subject to modification for the 1949 Sports Festival.



YEAR-'ROUND PASTURE PROGRAM *for 125 Ewes and their lambs on 65 acres*

By LEW REISNER
Field Editor, IAA RECORD

DIXON Springs Experiment Station, the 5000-acre experimental farm run by the University of Illinois in Pope county, is spreading a new science of pasture farming throughout southern Illinois.

By showing how grass farming is restoring its own hilly and eroded fields, bought by the federal government in 1935 for about $15 an acre, the Dixon Springs station is proving that careful farming can bring back life to abandoned lands.

The pastures at Dixon Springs are visited each year by thousands of farmers who come singly and on organized tours from all parts of southern Illinois and surrounding states. These pastures are providing a wealth of information on good management practices.

Because of the mild climate, hilly terrain, and thinner soils, much of southern Illinois is well adapted to raising sheep. The men at Dixon Springs were quick to realize this and sheep flocks were established as one of the first livestock enterprises.

The station keeps about 700 grade breeding ewes which are divided into smaller flocks for feeding and pasture experiments. In addition a purebred flock of Hampshires and Suffolks are maintained. One of these flocks of grade ewes has provided a revealing experiment in the value of pasture farming.

This sheep project is called a year-around pasture program for feeding 125 ewes and their lambs on 65 acres of pasture-type lands. The field provides pasture in the summer and hay and grain during winter months.

In 1947, the second year of the experiment, this flock of sheep harvested in terms of lambs and wool a $2573.40 crop, an average of more than $39 an acre, on land that once went begging for a buyer.

The 65-acre field is divided sensibly into 10 and 15-acre tracts as shown by the accompanying chart. The sheep, with their lambs, are turned out early in the spring on a 15-acre field of succulent balbo rye which this year was ready to be pastured on March 19. In May the rye is disked and planted either to soybeans for hay or soybeans and sudan grass for silage.

In early summer the sheep graze alternately on the two permanent pastures. Later lespedeza and sweet clover are ready for the ewes and lambs. Then in late summer and fall the permanent pastures are used again. The five pastures provide green grass from early spring to late fall.

Dick Webb, 3, son of station superintendent, has hard time holding frisky lamb which has markings about eyes resembling a Panda.

Ewes and lambs are turned out on rye pasture early in spring at Dixon Springs. Picture was taken March 19.

R. J. Webb, station superintendent, says that the ladino clover has provided by far the best pasture for the sheep. Ladino is well adapted to southern Illinois.

The cost of seeding the pasture and treating the soil before the sheep were turned into the field is figured at $30 an acre. The soil was treated with four tons of limestone and 400 pounds of super-phosphate per acre. This cost plus the original cost of $15 for the land is about equal to the gross return last year.

Last year the 125 ewes produced 10,170 pounds of lamb and 840 pounds of wool. The lambs sold for 22c a

THE first warm days of May are marking the start of the summer campaign to rid Illinois of flies as farmers join with city groups throughout the state in an all-out battle against the pest.

The state-wide campaign is being directed by the Illinois Agricultural Association, the Illinois Natural History Survey, the University of Illinois College of Agriculture, and the State Department of Public Health.

Farm Bureaus and farm advisers in 89 counties are working with city health authorities to rid their communities of flies. They are enlisting the aid of hardware dealers, druggists, luncheon clubs, chambers of commerce, housewives, and farmers.

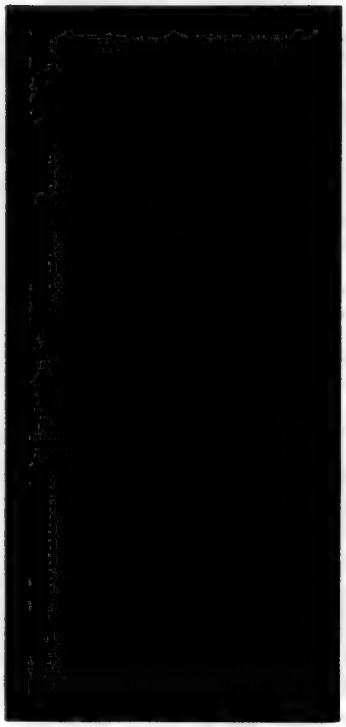
As an example of cooperation, farmers and merchants at Ramsey in Fayette county have met to draw plans to rid the village and five adjoining townships of flies.

The village is using an old fire engine to spray with DDT in town while farmers are either spraying on their own or hiring one of two local custom sprayers.

Farmers who plan to join the campaign should have their clean-up work completed this month. This entails hauling out manure, cleaning up old straw piles, and ridding farms of fly-breeding sources.

Many are joining the campaign even though their neighbors are not planning to do so. Flies do not travel great distances, and farmers who get a few from their neighbors can kill the intruders by their own spraying.

Farmers buying DDT materials are finding that there are various types and concentrations on the market. The three most often recommended are: **The 50 per cent DDT wettable powder.** This is the most economical source of DDT and is recommended for both livestock and buildings. It leaves a slight whitish residue, however, and requires some agitation to keep in solution.



The 25 per cent DDT oil emulsion concentrate. This is DDT in a liquid form and is recommended for interior and exterior surfaces of farm buildings where a slight whitish residue would be objectionable. It is easier to mix with water but is more expensive than the 50 per cent wettable powder.

The 5 per cent DDT oil solution. Designed for exterior surfaces around the home, such as screens, doors, porch ceilings, it lasts longer than other DDT materials but is more expensive.

DDT kills by paralyzing the insect's nerve centers. Very small amounts on any part of the fly's body will penetrate and kill. That is why it is not necessary to spray directly on the insect. Flies pick up a killing dose by walking on DDT residue.

This is also the reason for spraying all surfaces where insects gather and roost. Various strength sprays are being recommended for buildings but one important rule should be followed. One-half pound of the actual chemical DDT should be deposited on every thousand square feet of fly-roosting surface, according to H. B. Petty, entomologist for the Natural History Survey at Urbana.

This half pound of DDT is found in one pound of 50 per cent DDT wettable powder, one quart of 25 per cent DDT emulsified concentrate, or a little more than one gallon of five per cent DDT oil solution. These various amounts should then be mixed with two or three gallons of water to make enough liquid to cover 1000 square feet.

In spraying livestock, dairy cattle are sprayed weekly with a spray containing one-half pound of 50 per cent DDT water-wettable powder to three gallons of water.

Beef cattle are treated once a month with a spray containing one-fourth pound of 50 per cent DDT wettable powder in three gallons of water.

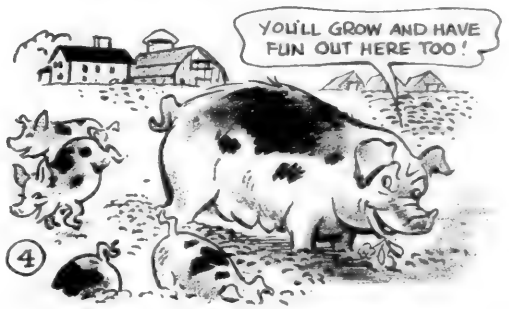
Success of the program on any farm will depend on the follow-up sprayings throughout the summer and fall. By October it should be possible to appraise the success of the state-wide program.

But no matter what his country or city neighbors do, each farmer can reap the rewards of cleanliness, comfort, and better living from his own efforts to rid his farm of flies.

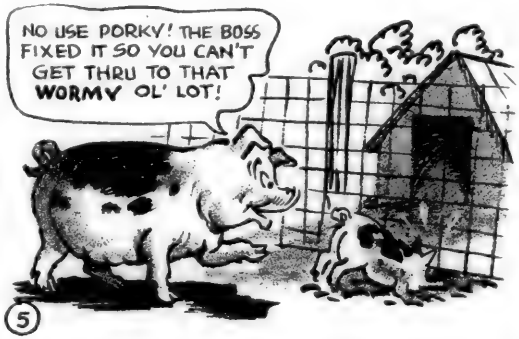
The McLean county system of swine sanitation is a proven method of cutting baby pig losses. One step is washing the sow. Worm eggs can be transferred to baby pigs by the sow if she is not washed before farrowing.

Farrowing pens should be cleaned and disinfected. Scrape out all manure and dirt and disinfect with boiling lye water. Use one pound of lye to 15 gallons of water.

Hauling sows to clean sheds out on clean ground is a third step in the McLean system. If sows are driven to the clean sheds and pasture they carry too much contamination with them.



Plenty of good legumes or other green pasture increases the health and gain of pigs because they supply vitamins, minerals and supplements essential to any good swine ration. They also save high-priced grains.



Pigs must be kept out of worm and disease-infected old lots and sheds. Preventing worm infestation is cheaper than removing worms by treatment.

Pigs should be immunized against hog cholera as an added safeguard to protect their health. Hog cholera is still the most serious disease of swine.

Soil Saver FOR 40 YEARS

Adolph Spitznass points along terrace which forms part of system started in 1928. Watching are Sam Sorrells, IAA livestock fieldman, left, and R. C. Broom, Williamson county farm advisor. White line indicates lay of terrace.

FROM his front porch Adolph Spitznass, 65, of near Marion in Williamson county, commands a magnificent view of the green, terraced fields that comprise his 253-acre livestock farm.

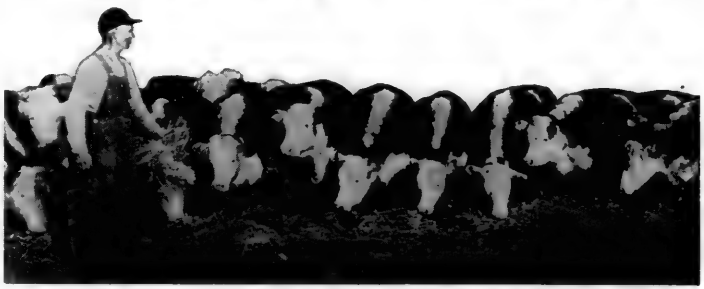
Adolph can see from this vantage point the far corners of his farm and watch his fine cow herd of sleek Herefords as they graze knee-deep in clover with frisky, white-faced calves by their sides.

This, however, was not the view that confronted young Adolph 40 years ago when he brought his bride to the family homestead he had taken over from his father the fall before.

The house and barn was located, as they remain today, in the center of his farm on the crest of a high knoll, with the fields sloping sharply in three directions from the homestead. But the hillside fields were barren and badly gullied. Heavy cropping and cultivating with the slope had eroded the fertility away.

"My father," Spitznass said, "bought the farm in 1883 for $31 an acre. He was a good farmer, grew good crops and seeded down with red clover. But this wasn't enough. Just about the time I took it over, yields started to go down pretty fast."

From stark necessity, backed by a deep love of his land, Adolph Spitznass started to rebuild a worn farm. And from these early struggles Spitznass learned how the job is done and in the process became a pioneer in soil conservation practices that are considered new even today.



Adolph throws out bale of bonn hay to fine herd of 27 Hereford cows that last year raised a $4000 calf crop on roughage and without grain.

His soil building program, based on trial and error, gradually evolved around the practices of heavy fertilization, terracing, livestock farming, large acreages of legumes, and long pasture rotations.

Spitznass started by saving his hillside soil every way he could. He would tramp straw, corn stalks, brush, anything he could lay his hands on, into the ditches to stop them from spreading.

Then in the early twenties he started to lime. Since that time, he has bought and spread 67 carloads of limestone. More recently he had been adding rock phosphate and has tested the effects of potash.

About 20 years ago, even before the days of the depression and CCC camps, Adolph learned about building terraces from the Williamson County Farm Bureau which Adolph helped to organize and joined 30 years ago as a charter member.

Pointing to a steep slope now neatly grassed, Adolph reminisced: "Here's where I built my first terraces with four mules and a small iron road grader." He still has the grader, and uses it to mend rain-damaged terraces.

Spitznass credits his terraces with rebuilding his farm more quickly and saving more soil than any other practice he has used. Before that, even with legumes, progress was slow.

As his liming and terracing progressed, Spitznass found he was having better luck with his legume seedings, and began to rely more and more on alfalfa and clover for hay and pasture. As he grew more roughage he kept more stock. Adolph estimates that he feeds at least three times as many cattle, hogs, and sheep as he used to.

Rotations became longer and longer and now Spitznass leaves terraced fields in hay and pasture as long as they are productive, with five, six, and seven year rotation. This year he estimates that only 66 of his 253 acres will be cropped with 32 acres in corn, 20 in wheat, and 16 in oats.

Yields of grain have doubled and tripled. Last year from one field that years ago would produce only nubbins, he harvested 88 bushels of corn an acre.

The income of the Spitznass farm is supplemented by royalties from coal which a mining company is digging from a large vein underlying the farm. The royalties are not large.

But the coal does present Spitznass with a real problem. "My farm," he said, "is one place where the doctrine of cheap food and high wages doesn't pan out for the farmer." He has trouble keeping help since most men can make a higher hourly wage working in the mines.

(*Continued on page* 34)

State Committee to Study RURAL ROADS

IT MAY be a long time before bottomless rural roads are a thing of the past. But a committee of 20 Illinois farmers is going to see what can be done about it.

The 20 men, representing every section of the state, have been appointed to the Illinois Agricultural Association's Road Survey Committee. They will make a detailed study of the rural road situation and make recommendations to the IAA board based on their conclusions.

Members of the committee are: K. T. Smith, Greenfield, chairman; Homer W. Curtiss, Stockton, vice-chairman; Charles S. Mayfield, IAA staff, secretary; Edwin Gumm, Galesburg; F. E. Morris, Buffalo; Herbert R. Kiltz, Woodstock; Lane Clapsaddle, Earlville; Robert Schubert, Mt. Carroll.

Ray B. Litchfield, Toluca; Guy Gee, Forrest; Quay Matthews, Alvin; Mark Harry, Humboldt; Emery Irwin, Petersburg; Ed Niehaus, Butler; Erwin Isenberg, Alhambra; George Reigle, Oblong; Virgil Milner, Fairfield; and Loyd Pickard, Thompsonville.

The study will include the entire administrative, financial, and operational setup of the rural road system in Illinois; a survey of the road systems of neighboring states; and conferences with experts on road finance and engineering.

President Charles B. Shuman of the IAA said the committee was set up because of growing dissatisfaction among Illinois farmers with the deplorable condition of country roads. He pointed out that less than 50 per cent of the farmers in Illinois live on all-weather roads, and it is questionable whether some of these roads could be considered all-weather.

"The condition of our rural roads," Shuman said, "cannot be tolerated much longer. It is interfering with the education of our children and the economical marketing of our products. A far higher percentage of farmers could be serviced with all-weather roads with present funds if they were properly administered.

"Possibilities should be examined for the reorganization of road districts, for more research on road materials, and for better knowledge of draining and grading."

The idea of a statewide road survey committee along the lines of the successful IAA School Survey Committee which made a report in 1944, has been in the minds of IAA leaders for some time.

It was offered by President Shuman merely as a suggestion at the IAA convention in St. Louis last November. Farmers expressing their opinion welcomed the suggestion with a great deal of enthusiasm and encouraged the IAA board to proceed with the appointment of a statewide committee.

Most farmers are agreed on the need for a long-range continuous program for farm roads financed in part by state money. Local property taxes finance 75 per cent of the road mileage in Illinois' present farm-to-highway roads. It is hoped the road committee will be able to point the way to a better country road system at a price farmers can afford to pay.

The IAA board of directors has appointed the men above as a statewide committee to study and recommend improvement in the administration of the Illinois rural road system. Front row: left to right, Erwin Isenberg, Alhambra; Robert Schubert, Mt. Carroll; S. S. Stetson, Milan; K. T. Smith, Greenfield, chairman; Quay Matthews, Alvin; Herbert R. Kiltz, Woodstock; Miss Patricia Steffan, office secretary. Back row: left to right, Charles S. Mayfield, IAA staff, secretary; F. E. Morris, Buffalo; Ronald Holt, Gulva; Ed Niehaus, Butler; Emery Irwin, Petersburg; Guy Gee, Forrest; Mark Harry, Humboldt; Virgil Milner, Fairfield; Edwin Gumm, Galesburg; Loyd Pickard, Thompsonville; Ray B. Litchfield, Toluca; Lyman Bunting, Ellery; Homer Curtiss, Stockton, vice-chairman. Not in picture are Lane Clapsaddle, Earlville; and George Reigle, Oblong. The committee will meet an average of once each month.

Kiltz, Woodstock; Miss Patricia Steffan, office secretary. Back row: left to right, Charles S. Mayfield, IAA Staff, secretary; F. E. Morris, Buffalo; Ronald Holt, Galva; Ed Niehaus, Butler; Emery Irwin, Petersburg; Guy Gee, Forrest; Mark Harry, Humboldt; Virgil Milner, Fairfield; Edwin Gumm, Galesburg; Loyd Pickard, Thompsonville; Ray B. Litchfield, Toluca; Lyman Bunting, Ellery; Homer Curtiss, Stockton, vice-chairman. Not in picture are Lane Clapsaddle, Earlville; and George Reigle, Oblong. The committee will meet an average of once each month.

FINISH IAA ECONOMIC STUDY REPORT

A DETAILED study of the economic problems facing Illinois agriculture has been completed by the Economic Study Committee of the Illinois Agricultural Association.

The printed report, including the conclusions of the committee, is now available to Farm Bureau members. Copies may be obtained at county Farm Bureau offices or by writing to the IAA RECORD, 43 East Ohio Street, Chicago 11, Illinois.

A preface to the report by President Charles B. Shuman with the approval of the board of directors, reads as follows:

"The board of directors of Illinois Agricultural Association presents herewith the complete and final report of the Economic Study Committee for the study and consideration of the membership of the Association. The work and report of this Committee, which was appointed by the board of directors, was a completely independent study and has not been altered. This report has not been approved or disapproved in whole or in part by the board of directors or voting delegates of the Association. The purpose of this Committee and its report is to stimulate independent thinking and discussion among Illinois farmers on national farm policy.

"Illinois Farm Bureau leaders and members know that the past and present policies of the organization have always been determined by the membership and they will insist that the future course of the Association be determined in the same manner.

"These members and leaders will also recognize that, while the report of this Committee is in substantial agreement with the position of the Association on most of the present important issues confronting agriculture, it does seriously conflict in some instances with policies of the organization as they have been determined by the vote of the membership in recent annual conventions. The board of directors is convinced that fair consideration of any controversial question can be given only after all viewpoints have been examined.

"The Economic Study Committe has made a valuable contribution towards a better understanding and a clarification of fundamental economic principles and issues involved in the agricultural problem. If farmers throughout Illinois will give careful study to this report, they will certainly be better prepared to take a position of leadership in developing and improving national programs affecting agriculture."

Work of the Economic Study Committee extended over a period of 12 months during which time 10 meetings were held covering 13 full days. A sub-committee, elected to prepare a preliminary draft of the report, held four additional all-day sessions. The report is 81 pages long and contains 16 charts and one illustration.

The Committee offers its version of the farm problem and from there proceeds to analyze its causes and the many suggested cures, and concludes with its own recommendations.

Following is its introduction to the problem: "The most important and persistent problem of farmers in the United States during the last 30 years has been that of violent fluctuation in the general level of farm prices and income. Alternate periods of rising and falling prices have been a principal cause of farmers' incomes and living standards being considerably lower than those of the rest of the nation."

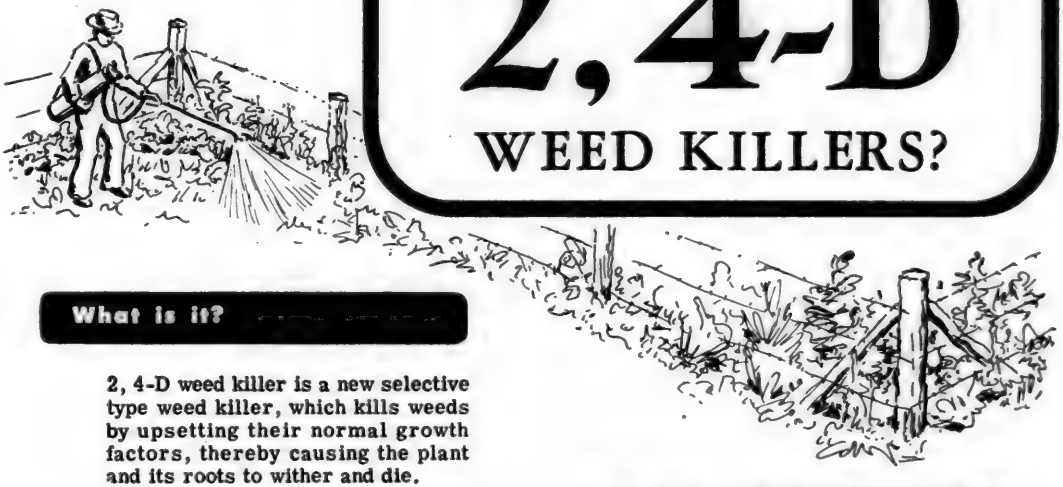
In the report foreword, the Committee says: "Some of these changes may appear to be rather drastic, but we believe they are necessary in order to take advantage of our experiences with previous farm programs and the growing knowledge of basic factors which affect prices of farm products and the income of farmers, and to permit a maximum of agricultural progress. In making these recommendations the Committee has attempted to keep the welfare of the entire nation foremost in mind at all times."

The Committee concludes: "We are glad to have had the opportunity to study this important problem as a committee. We hope that our work and this report will be helpful to the leaders of the Illinois Agricultural Association and to farmers generally in formulating and securing a national farm program that will maintain farm income at satisfactory levels, promote general economic stability, and maintain traditional economic and political freedom in America."

Original members of the IAA Economic Study Committee assemble in Chicago for their first meeting. L. to R., standing: Leslie Mathers, Mason City; W. A. Dennis, Paris; Alfred Rister, Omaha; Russell Hayes, Sparta; B. C. Fulling, Palestine; Homer Curtiss, Stockton; J. S. Bumgarner, McNabb; F. E. Morris, Buffalo; front row: K. T. Smith, Greenfield; Gerald Waters, Edinburg; John Hanna, Sr., Geneseo; Ernest D. Lawrence, Danvers; Earl Kirkpatrick, Roseville; Otto Steffey, Stronghurst; E. E. Houghtby, Shabbona; Lee Knox, Morrison; and Stanley Castle, Alton. Not in the picture are: G. O. Fairweather, Barrington; Lyman Bunting, Ellery; Earl M. Hughes, Woodstock; Harry Munch, Argenta; Everett C. Phelps, Rockton. Subcommittee members were Morris, Dennis, Hughes, Knox, and Lawrence.

COPIES ARE NOW AVAILABLE ON REQUEST TO FARM BUREAU MEMBERS

What about 2,4-D WEED KILLERS?



What is it?

2, 4-D weed killer is a new selective type weed killer, which kills weeds by upsetting their normal growth factors, thereby causing the plant and its roots to wither and die.

What are its uses?

2, 4-D weed killing compounds, when mixed with proper amounts of water, make an effective spray for destroying "noxious weed beds" on your farm. These are the weed beds around farm yards, fence rows, grass waterways, lanes, lawns, and pastures. 2, 4-D is also effective for controlling those "weedy patches", in the crop fields, which in spite of cultivation, easily get out of control during wet seasons.

CAUTION

2, 4-D weed killing materials should be used with the proper amount of caution. When treating farm crops, consult your Farm Adviser and Extension Service Bulletins; regarding their proper use and application, as 2, 4-D may damage legume pastures, and certain field crops.

What will it do?

2, 4-D weed killer is especially adapted for killing many broad-leaved weeds, but at the same time does not harm most grasses. It kills the majority of this type of weed easily and completely.

What are the advantages?

2, 4-D weed killers are inexpensive when compared to the time and hard work required for constantly mowing and cutting weeds. In most cases, one effective application will do the job of controlling weeds during the season.

Where can I get it?

Your County Farm Bureau Service Company can supply you. Contact their representatives regarding your 2, 4-D weed killer needs. They are able to economically supply the proper material to take care of your requirements.

This message is presented in behalf of the 82 Farm Bureau County Service Companies affiliated with Illinois Farm Supply Co., Chicago.

What are its uses?

2, 4-D weed killing compounds, when mixed with proper amounts of water, make an effective spray for destroying "noxious weed beds" on your farm. These are the weed beds around farm yards, fence rows, grass waterways, lanes, lawns, and pastures. 2, 4-D is also effective for controlling those "weedy patches", in the crop fields, which in spite of cultivation, easily get out of control during wet seasons.

Caution

2, 4-D weed killing materials should be used with the proper amount of caution. When treating farm crops, consult your Farm Adviser and Extension Service Bulletins; regarding their proper use and application, as 2, 4-D may damage legume pastures, and certain field crops.

What is it not?

2, 4-D weed killer is especially adapted for killing many broad-leaved weeds, but at the same time does not harm most grasses. It kills the majority of this type of weed easily and completely.

What are the advantages?

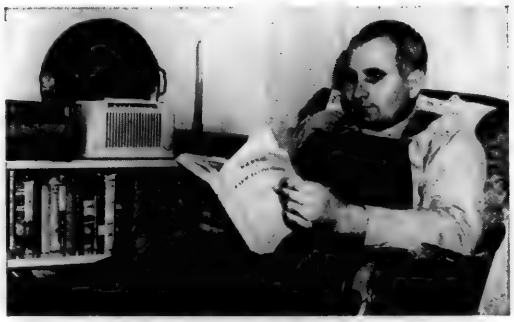
2, 4-D weed killers are inexpensive when compared to the time and hard work required for constantly mowing and cutting weeds. In most cases, one effective application will do the job of controlling weeds during the season.

Where can I get it?

Your County Farm Bureau Service Company can supply you. Contact their representatives regarding your 2, 4-D weed killer needs. They are able to economically supply the proper material to take care of your requirements.

This message is presented in behalf of the 82 Farm Bureau County Service Companies affiliated with Illinois Farm Supply Co., Chicago.

Youngest Director *Blends Book And* DIRT FARMING



As a farm economist Hughes has to do a great deal of reading to keep up with the newest farm program proposals, etc. Here he reads the latest copy of the Journal of Farm Economics.

By JIM THOMSON
Ass't. Editor, IAA RECORD

YOUNGEST member of the Illinois Agricultural Association board of directors is 40-year-old Earl M. Hughes of Woodstock in McHenry county. Since 1946 he has represented Cook, Lake, Kane, McHenry, DuPage and Will counties.

This area is possibly the most diversified farming area in Illinois. It leans heavily to dairying, cash grain, beef and pork production, truck gardening, and flower farming, and other minor agricultural activities.

Farmers in this area are an unusually practical lot. Closer to Chicago, the farms are small. Every cost item is closely scrutinized. Every activity must pay its way. Director Hughes operates the same practical way.

Like most college educated farmers, he likes to have scientific proof for what he does. If he doesn't get it or isn't sure of the proof offered, he will go out in the fields and experiment himself. If a practice shows up well on the account book, he uses it. If not, he discards it and looks for something better.

Hughes was born and reared in the area he now farms four miles northwest of Woodstock. Following his graduation from the high school at Woodstock, he attended the University of Illinois and was graduated in general agriculture in 1929.

Returning home, he operated a dairy farm four years then took up graduate work at Cornell University where he received the degree of doctor of philosophy in agricultural economics in 1938.

He was an assistant professor of agricultural economics at the University of Illinois until 1941 when he moved to the farm and became first field man with the Northeastern Illinois Farm Bureau Farm Management Service. He resigned from the Farm Management Service in 1943 to devote full time to the farm.

Director Hughes operates 836 acres with his father. Of this 836 acres, 166 acres are owned by the IAA director, and 430 are rented. The rest is owned by his father with whom he operates the farm in partnership.

Hughes also owns a 471-acre farm 5½ miles away which he rents out. He is thus an unusual combination of owner, operator, landlord, tenant, and partner.

The Hughes farm has shifted over more and more to the production of certified seed until it is now the most important activity. A herd of 40 Holstein cows is maintained, and production of pork averages 40,000 to 50,000 pounds annually. The farm also has a laying flock of 500-600 Leghorns. Egg production averaged more than 200 eggs per hen last year. Twenty-five of his Duroc Jerseys are being crossed with Minnesota No. 1 boars as an experiment.

This is the 14th in a series of articles to further acquaint you with the men who represent you on the Illinois Agricultural Association board of directors.

Last year 300 acres were sown to Clinton oats for seed; 85 to corn, and 125 to soybeans. Eighty acres of corn were grown for home use, and 20 acres additional were in corn for silage. Eighty acres were in permanent pasture and 65 were in hay and tillable pasture. This grain program was heavier than normal.

Crop rotation on the Hughes farm normally runs corn, corn or soybeans, oats, alfalfa for hay, and alfalfa for pasture. Three to four tons of limestone per acre have been spread throughout the farm.

Director Hughes is a firm believer in liberal applications of plant foods to his fields. His records show that it pays. Planting check plots against fields receiving applications of triple superphosphate, ammonium nitrate, and straight potash, Hughes said the additional yield of corn per acre was 20 bushels and of oats, 15 bushels.

The soil is a brown silt loam underlain with deep gravel beds. A minimum of erosion control is necessary because of the level land and small runoff. Hughes has been a pioneer in his area in the use of weed killer. Spraying his oats last year was extremely profitable, he said, because of the higher yields.

Director Hughes was married in 1932 to the former Mildred Shuman of Sullivan, a sister of IAA President Charles B. Shuman. They have three children:

Left: Swedish visitor to Hughes farm Magnus Franson points to fertilizer attachment used while sowing oats, something "we don't have in Sweden," he said. Looking on are Hughes, son Earl Jr., better known as "Happy," and Dean Thompson, Hughes employee. Center: Using electric welding outfit. Right: Loading Clinton oats seed grown on the Hughes farm.

Son Happy hangs on to his cat while he watches Dad sack oats seed.

Helen, 11; Robert, 8; and Earl Jr., 5.

Hughes has been active in school reorganization. He is a member of the McHenry County School Survey Committee and is president of his school district which includes 23 one-room schools and one two-room school. As president he has a leading part in the plan to build two schools to replace the 24.

He was a member of the IAA Livestock Marketing Committee and the IAA Economic Survey Committee which recently finished its work and made its report. He is a former secretary of the McHenry County Farm Bureau and is now secretary of the county service company.

Hughes is an advisory member on the committee on the University of Illinois department of agricultural economics, a member of the American Farm Economics Association, and a member of the American Society of Farm Managers and Rural Appraisers. He was a member of the first board of directors of the Woodstock Chamber of Commerce.

Numerous bulletins and mimeographed reports have been published by Hughes on farm management and agricultural economics.

Widely-known as a progressive farmer in his community, Hughes recently had a young Swede, Magnus Fransen, 27, sent to him when he arrived in the U.S. to study our farming methods. Fransen stayed at the Hughes place for several weeks and was pleased with the excellent opportunity the Hughes farm and Director Hughes himself offered in his quest for information on American agriculture.

Shaded area represents the old congressional districts 1-11, which are represented on the Illinois Agricultural Association board of directors by Earl M. Hughes of Woodstock.

SPRAYING EQUIPMENT

FOR YOUR FLY & WEED ERADICATION PROGRAM

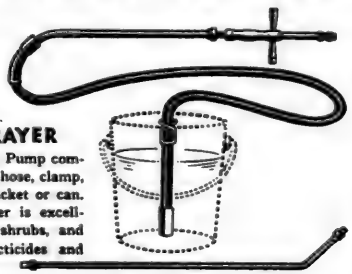
HAND SPRAYER

All brass and copper, for long life. Strong pump. All direction nozzle, sprays continuously in operation.

TROMBONE SPRAYER

Sprayer consists of Pump complete with adjustable nozzle, hose, clamp, and strainer for use with bucket or can.

This double action sprayer is excellent for spraying orchards, shrubs, and gardens. Ideal for insecticides and weed control solutions.



WHEELBARROW SPRAYER

This is a complete portable spraying unit for one man operation. Rigidly constructed for heavy duty use. Pumping solution into 5 gal. steel pressure tank builds up pressure for spraying until pressure is nearly gone. 18 gallon heavy gauge tank hot-dip galvanized. Steel bands top and bottom. Heavy Duty Pump 1¾" brass cylinder, with 2" steel air chamber gives 200 to 250 lbs. pressure. All brass valve parts easily removed for inspection and cleaning. 2" Semi-Pneumatic rubber tire, 16" disc Wheel, 12' hose, 3' extension. Lever type shut-off and Fine Mist Nozzle.

KNAPSACK SPRAYER

This Sprayer is a superior product, with quality material and workmanship throughout. Recommended for all general spraying, weed killer, D.D.T. disinfectants, etc. Non Clog nozzle and 24" seamless brass angle extension, provide easy spraying at different angles. The automatic shut-off and Hold-open feature give the operator finger-tip control at all times. Solid brass valve plunger and seat.

This equipment is available from your Farm Bureau Service Co. affiliated with

ILLINOIS FARM SUPPLY COMPANY, CHICAGO

THAT'S WHAT WE THINK

Prairie Farms Creameries
Chicago, Illinois

I HAVE had occasion to sample some of the butter bearing your label. Enclosed is a part of the wrapper in which the butter came.

Do you have any distributors here in Norfolk for this product, and if so, could you forward me their address? I have tried, unsuccessfully however, to locate this brand here.

Your butter is the best I have ever tasted in this city.

If you do not have any distributors in this city, I certainly wish you could encourage someone to carry Prairie Farms butter.

This is beginning to sound like a "fan" letter but you would understand if you had been used to the good milk and butter we had in my home state, New York — then tried the products here.

Mrs. Joan Miller
1000 Watson Street
Norfolk 6, Virginia

Wish we could help you. But we who work for the IAA, the parent organization, cannot buy it even here in Chicago.

LIKES RECORD

YOUR magazine comes to my father, and I certainly enjoy it whenever I have the chance to read it. I am very much interested in the series of cover pictures of historic and picturesque Illinois. Could you please send me the entire series, also the description of each, to show and read to our York Home Bureau Unit, which meets the first week in May — for a lesson similar to this?

Mrs. H. E. Winger
Clark County

FENCE ROW TALK

TOM — My wife said you sold your hogs this morning.

Dick — Yep. I got back about noon.

Tom — Where did you sell 'em?

Dick — That's an odd question t'ask me, I took 'em to our new co-op yards, of course.

Tom — That's where I took mine this time; thought I'd try 'em once. What did your'n fetch?

Dick — Well, for all that weighed 200 to 225 pounds, I got $24; the lighter ones $23.80.

Tom — There, that's a good sample of all this here Farm Bureau business. Mine averaged 210 pounds and they never sorted 'em at all, just paid me $23.80 for the whole bunch. Course my brother ain't on the marketing committee. I've always wondered where they got their dividends. Well, I'll bet they don't get no more off of me!!

Dick — Did you call the yards before you loaded your hogs?

Tom — Course not, what's it any of their business when I sell my hogs?

Dick — Well, of course, it isn't, unless you want to sell at the highest possible market. Some days they have an order for a definite number of hogs for which they can pay over the true market. What time did you take yours in?

Tom — Oh, it must have been 2 o'clock, why?

Dick — Well, that explains everything. First, you never called the manager when your hogs were ready. Second, you were too late to get in on the premium till the quota was filled. You received the regular market price for hogs that day, with darned little shrink, and you saw them weighed. You didn't get gypped. I got a premium for the trouble of having my hogs listed.

Tom — O-O-O h! I didn't know that!

Harry — Tom, Dick has given you the answer. Don't cuss your own marketing system. If you have t' gripe, cuss the other Farm Bureau members that still think they can beat the old "shell game" and keep supplying the old system. They are the boys who are really responsible for the limited number of premium hogs. With Farm Bureau members in Illinois, Iowa, Indiana, and Missouri producing 80 per cent of the hogs in the market area, should they be cussing their own marketing system? Hogs are not considered intelligent, but they won't hunt acorns under ash trees.

Ol' Long Green
Effingham County

PRIDE IN ILLINOIS

I AM a rural school-teacher in a little one-room school. I am trying to teach the children to be proud of their state.

Among the greatest helps in this that I have found are the RECORD covers. Those pictures and the paragraphs that tell about them are the most prized items in my Illinois unit.

However, I have failed to get some of them, and others are soiled or torn by use, so I wondered if it would be possible for me to get copies of the whole set, with the little paragraphs, or old issues of the magazine. I shall be glad to pay postage or to pay for the set.

I hope you continue the series, especially, since they can be trimmed evenly and are an excellent size and color for bulletin boards.

Mrs. B. A. Tritchler
Hamilton County

"TO ERR IS HUMAN . . ."

ENCLOSED is a clipping about your April cover, the Baha'i Temple in Wilmette. Wilmette, my dear sir, is in Cook county not Lake. If you drive north on Michigan Avenue through Evanston, you will see the temple, just as you enter Wilmette. It is just across the line from Evanston, on Michigan Avenue and very near the lake. This site was chosen because it was said to be directly opposite on the earth from the place where the Bahaism originated in Persia. I trust the other information I read in the RECORD is more nearly correct, although it may not be geographically so near your office.

Mrs. Knight O. Holland
White County

The Baha'i Temple is in Cook county but not on Michigan Avenue. It is on Sheridan Road.

FARMERS AT HEART

I THINK the page of "News and Views for Homemakers" in our Farm Bureau magazine, "The RECORD," is wonderful. Once farmers, we have farm ideas and sympathies for farmers — always. Always we are farmers at heart. We think as farmers.

It is really the only life in our estimation. Especially since our Farm Bureau and Home Bureau organizations have taken over. We farmers now have a hand in legislation, etc., etc. So we really help ourselves.

Mrs. Walter Purvis
403 S. Sixth Street
Sullivan, Ill.

AN OLD PICTURE

I HAVE received your extra copy of March Illinois Agricultural Association RECORD as well as my regular issue.

I appreciate very much the two pages giving voting records of the Illinois legislators.

Your front cover is very good but I think that you might have used an up-to-date picture. The cars all have tires mounted on the back which shows that it is several years old.

Rep. J. Lisle Laufer
14th Senatorial District
Hampshire, Ill.

We expected some sharp-eyed readers to observe that the RECORD cover picture of the original site of the city of Chicago was quite old. We used it because it seemed to be the best available.

LETTERS TO THE EDITOR

. . . AND IT MEANS YOUR AUTO INSURANCE

DOES COST YOU LESS!

WHY PAY MORE than the **low** auto insurance rates that you are entitled to as a **farmer** and as a **Farm Bureau Member.**

The finest coverage available is yours, through Country Mutual Casualty Company, first, because your mode of living has proved to us over the years that you are the preferred risk.

Second, you can enjoy this lower insurance rate because as a Farm Bureau Member you **OWN** your **OWN** insurance company — the Country Mutual Casualty Company. And all the savings earned by you and other members through safer driving are passed back to you.

It all adds up to a large saving in your auto insurance cost. And that's well worth looking into. Get all the facts today from your friendly Country Mutual Casualty representative.

COUNTRY MUTUAL CASUALTY CO. 43 EAST OHIO STREET, CHICAGO 11, ILLINOIS

MORE CORN THE EASY WAY

By GEORGE D. SCARSETH

Director of Research, American Farm Research Association

★ ★ ★

YOU can make 30 extra bushels of cheaper corn from most of your corn land over and above what you are now doing unless you are already producing 125 bushels or more per acre.

This statement will interest most corn growers, since state average yields are running 40 and sometimes 50 bushels per acre in the Midwest.

You want to know how this can be done, especially since the bushels most of you are growing cost anywhere from 75 cents to $2 each, depending on how big your yields are. The extra bushels will cost you about 40 to 60 cents each. Your own college specialists have this same information for you. This is to urge you to use them.

This cannot be the whole story of how to build the land through proper land use, with heavily fertilized deep rooted legumes, and soil conserving rotations. We must limit this to how to get those 30 extra bushels per acre from the condition your corn land is in now.

Suppose your land is such that you are expecting to make about 70 bushels per acre this year. To do this you expect to apply in the row about 200 pounds per acre of 2-12-6. (Unhappily, most of you will have no choice but to use this uneconomic grade — 100 pounds of 4-24-12 or 150 pounds of 3-18-9 would be more to your advantage).

If the rainfall is enough for a 70-bushel crop it is enough for the 30 extra bushels or for a 100-bushel crop too. The two most probable "bottlenecks" stopping your yield at the 70-bushel level are: (1) lack of sufficient stand, and (2) lack of sufficient nitrogen. To go to 100 bushels per acre or more, you have to cut the pattern that wide.

Here is what it takes at the 70-bushel level to get 30 extra bushels on most soils. (We assume that while phosphate, potash, lime and minor elements are likely deficient, the bulk of these should be applied in front of the legumes when seeding the grains and as topdressings on the hay).

1. Experiments have proven that it takes about two pounds of nitrogen to make each extra bushel of corn; so plow under, preferably in the spring, 60 pounds of nitrogen per acre. This takes about 190 pounds ammonium nitrate, or 300 pounds cyanamid or ammonium sulphate or 375 pounds of nitrate of soda. If you know you have a potash deficiency include 100 pounds of muriate of potash.

2. Apply at planting time the equivalent of 100 pounds per acre of 4-24-12 or 5-20-20. This is largely a starter to feed the corn when small and to get it out ahead of the weeds.

3. It takes about 3,000 stalks (single ears) to make 30 bushels of corn, so for a 100-bushel crop you should have a stand of about 12,000 stalks (ears) per acre.

4. If you are one of those who want to try for higher stakes, extend the above formula to fit your needs.

The whole story about how thick to plant corn boils down to a simple rule George Enfield of Purdue University has recently announced.

"When corn is drilled in 40 inch rows use this rule: Divide 1,000 by the number of bushels you think the land is capable of producing per acre and the number you get is the inches to space each kernel. Thus for 100 bushels the spacing is 10 inches and for 150 bushels the spacing is seven inches, etc.

When corn is checked 40 by 40 inches use this rule: Plant 1 kernel per hill for each 30 bushels you think the land is capable of producing. Thus for 90 bushels use three kernels and for 120 bushels use four inches.

If you overestimate the productive capacity of the soil and plant too thick the ears will be small. (Ohio State scientists have shown that the biggest yields were obtained from 8 oz. ears).

If you underestimate the productive capacity of the soil and plant too thin your yield won't be as big as your goal, because there won't be enough stalks and ears to make a bigger yield. However, the ears will be big.

Professors Reed and Salter reported many results from a lot of field tests that brought them to this conclusion:— "To obtain maximum returns for large applications of fertilizer, it is necessary to maintain a planting rate of 12,000 to 14,000 plants per acre." For example in 1945 from 20 fields with a stand of 8,000 to 10,000 stalks per acre they averaged 70.8 bushels with only a row fertilizer, and only 77.5 bushels when 50 pounds of nitrogen (equivalent to 156 pounds ammonium nitrate per acre) per acre were plowed under in addition to the use of the row application. However, when the stand was increased to 12,000 "or over" along with the 50 pounds of nitrogen the yields averaged 94.6 bushels per acre.

Purdue University experiments show that four kernels per hill has ranged from 3 to 15 bushels more per acre than the three kernel rate on good soils.

Professors Seem and Richer showed that almost no increase (only 3 bushels per acre) from heavy fertilization (600 pounds per acre 10-10-10 plowed under) resulted when the stand was too thin, that is, 18 inches spacing in 42 inch rows (7,100 stalks per acre), but the increase was 20 bushels when the spacing was 8.4 inches (17,700 stalks per acre).

They also showed that to increase the stand without increasing the fertility resulted in only a change from 68 to 77 bushels per acre, however, at the higher fertility level the yields went from 71 to 97 bushels as the stand was changed from 7,100 to 17,700 stalks per acre.

This is what a farm yard looks like after a tornado has gone through. When this happened in Grundy county recently, 300 farmers pitched in to help their neighbors clean up. Right: the men worked in teams and are shown together on the Cherrie farm helping to remove some of the heavier debris. Seven farms in the county were leveled by the winds.

Sun-Times Photos

1300 HELP NEIGHBORS IN TORNADO DISASTERS

IT'S AN old story but it's always touching the way farmers turn out to help neighbors battered by misfortune, be it sickness, flood or tornado.

Big city dwellers who don't know their next door neighbors read with wonder and admiration the other day of the army of 300 Grundy county farmers who turned out to help their neighbors after a tornado swept through an area 1100 feet wide and seven miles long.

The howling wind twisted, smashed and destroyed practically everything in its path as it ripped across more than a score of farms. Seven farms were leveled.

Said one farmer looking over the ruin: "It took Pa 45 years to build. This happened in one minute."

When Farm Adviser M. E. Tascher appealed for help he expected about 50 farmers to show up on April 10. At 9 a.m. the roads near the elevator were packed with cars and trucks. There were at least 300. And they came not only from Grundy county but also from neighboring Will and Livingston counties.

There was plenty to do at home, there always is in April, but the men worked through Saturday and Sunday cleaning up. Some were ready Monday to finish the job. When a Chicago newspaper reporter asked a couple of farmers why they came to help. They looked surprised. "These folks are our neighbors," they answered a little puzzled that anyone should ask such a question.

ABOUT 1,000 farmers turned out in Champaign county at a call from their Farm Bureau to help farmers clean up in the Flatville-Gifford area after a tornado ripped across the county April 7. Five farms were badly damaged.

The "good neighbor" job was under the direction of Earl Bantz and J. Walker Robbins of the Farm Bureau office. The good neighbors turned out with saws, shovels, and trucks to move debris, fix fences, and patch buildings.

Robbins reported that the response was "wonderful." The women were there too, he said, and brought more food than the men could eat.

The next good neighbor task will be to help the storm victims get their spring crops planted. Some lost their farm machinery and will have to depend on their neighbors entirely.

Knowing Illinois farmers, they can be sure their faith in their neighbors is well founded.

NEW ERP HEAD REMEMBERED AS IAA CONVENTION SPEAKER

FARM Bureau people who attended the Illinois Agricultural Association annual meeting in 1944 may remember Paul Hoffman, president of the Studebaker Corporation, recently appointed director of the European Recovery Program.

At that time Hoffman was chairman of the Committee for Economic Development. He made a spirited address on the committee's plans for a high level of industrial production in the post-war period.

ERP provides a $6,098,000,000 program of assistance to Europe, China, Greece, and Turkey for a 12-month period. Additional appropriations are authorized through June 30, 1952 subject to annual congressional review.

Here, minus certain recent revisions, is the program which Department of Agriculture officials submitted to the State Department:

In the first crop year of ERP, 5,820,000 metric tons of breadgrains, valued at $536,000,000 (based on prices July 1, 1947) will be shipped abroad. Eligible nations will receive 146,000 tons of fats and oils, including butter, worth $80,000,000; 23,000 tons of meat (mainly horse meat) valued at $6,000,000; and $160,000,000 worth of dairy products, or 375,000 tons.

Ships carrying ERP commodities will include in their holds 205,000 tons of tobacco — $210,000,000 worth — and 521,000 tons of cotton, set at $438,000,000 in value. Officials have scheduled exports of 40,000 tons of eggs and 26,000 tons of rice. Other foods and feedstuffs expected to leave U. S. shores under ERP, include 1,125,000 tons of coarse grains; 198,000 tons of oil cake and meal; 138,000 tons of sugar; 121,000 tons of dried fruit; and 482,000 tons of peas and beans and fresh fruits.

MORE CORN THE EASY WAY

By GEORGE D. SCARSETH

Director of Research, American Farm Research Association

★ ★ ★

YOU can make 30 extra bushels of cheaper corn from most of your corn land over and above what you are now doing unless you are already producing 125 bushels or more per acre.

This statement will interest most corn growers, since state average yields are running 40 and sometimes 50 bushels per acre in the Midwest.

You want to know how this can be done, especially since the bushels most of you are growing cost anywhere from 75 cents to $2 each, depending on how big your yields are. The extra bushels will cost you about 40 to 60 cents each. Your own college specialists have this same information for you. This is to urge you to use them.

This cannot be the whole story of how to build the land through proper land use, with heavily fertilized deep rooted legumes, and soil conserving rotations. We must limit this to how to get those 30 extra bushels per acre from the condition your corn land is in now.

Suppose your land is such that you are expecting to make about 70 bushels per acre this year. To do this you expect to apply in the row about 200 pounds per acre of 2-12-6. (Unhappily, most of you will have no choice but to use this uneconomic grade — 100 pounds of 4-24-12 or 150 pounds of 3-18-9 would be more to your advantage).

If the rainfall is enough for a 70-bushel crop it is enough for the 30 extra bushels or for a 100-bushel crop too. The two most probable "bottlenecks" stopping your yield at the 70-bushel level are: (1) lack of sufficient stand, and (2) lack of sufficient nitrogen. To go to 100 bushels per acre or more, you have to cut the pattern that wide.

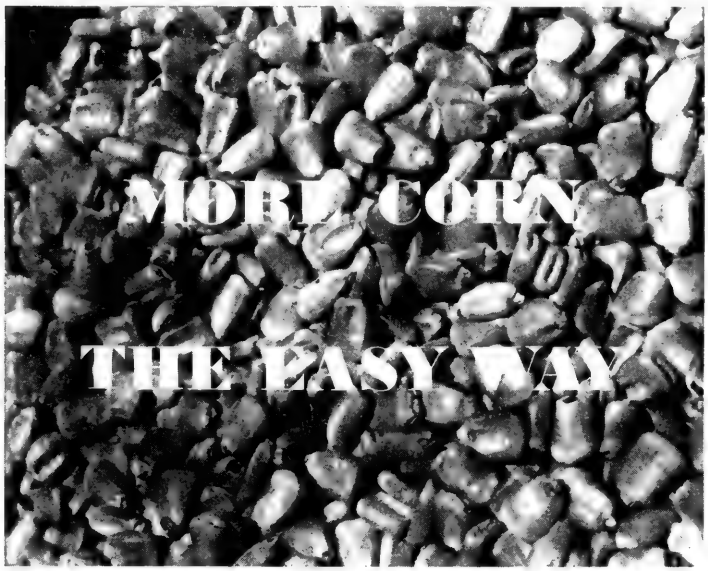
Here is what it takes at the 70-bushel level to get 30 extra bushels on most soils. (We assume that while phosphate, potash, lime and minor elements are likely deficient, the bulk of these should be applied in front of the legumes when seeding the grains and as topdressings on the hay).

1. Experiments have proven that it takes about two pounds of nitrogen to make each extra bushel of corn; so plow under, preferably in the spring, 60 pounds of nitrogen per acre. This takes about 190 pounds ammonium nitrate, or 300 pounds cyanamid or ammonium sulphate or 375 pounds of nitrate of soda. If you know you have a potash deficiency include 100 pounds of muriate of potash.

2. Apply at planting time the equivalent of 100 pounds per acre of 4-24-12 or 5-20-20. This is largely a starter to feed the corn when small and to get it out ahead of the weeds.

3. It takes about 3,000 stalks (single ears) to make 30 bushels of corn, so for a 100-bushel crop you should have a stand of about 12,000 stalks (ears) per acre.

4. If you are one of those who want to try for higher stakes, extend the above formula to fit your needs.



The whole story about how thick to plant corn boils down to a simple rule George Enfield of Purdue University has recently announced.

"When corn is drilled in 40 inch rows use this rule: Divide 1,000 by the number of bushels you think the land is capable of producing per acre and the number you get is the inches to space each kernel. Thus for 100 bushels the spacing is 10 inches and for 150 bushels the spacing is seven inches, etc.

When corn is checked 40 by 40 inches use this rule: Plant 1 kernel per hill for each 30 bushels you think the land is capable of producing. Thus for 90 bushels use three kernels and for 120 bushels use four inches.

If you overestimate the productive capacity of the soil and plant too thick the ears will be small. (Ohio State scientists have shown that the biggest yields were obtained from 8 oz. ears).

If you underestimate the productive capacity of the soil and plant too thin your yield won't be as big as your goal, because there won't be enough stalks and ears to make a bigger yield. However, the ears will be big.

Professors Reed and Salter reported many results from a lot of field tests that brought them to this conclusion:— "To obtain maximum returns for large applications of fertilizer, it is necessary to maintain a planting rate of 12,000 to 14,000 plants per acre." For example in 1945 from 20 fields with a stand of 8,000 to 10,000 stalks per acre they averaged 70.8 bushels with only a row fertilizer, and only 77.5 bushels when 50 pounds of nitrogen (equivalent to 156 pounds ammonium nitrate per acre) per acre were plowed under in addition to the use of the row application. However, when the stand was increased to 12,000 "or over" along with the 50 pounds of nitrogen the yields averaged 94.6 bushels per acre.

Purdue University experiments show that four kernels per hill has ranged from 3 to 15 bushels more per acre than the three kernel rate on good soils.

Professors Seem and Richer showed that almost no increase (only 3 bushels per acre) from heavy fertilization (600 pounds per acre 10-10-10 plowed under) resulted when the stand was too thin, that is, 18 inches spacing in 42 inch rows (7,100 stalks per acre), but the increase was 20 bushels when the spacing was 8.4 inches (17,700 stalks per acre).

They also showed that to increase the stand without increasing the fertility resulted in only a change from 68 to 77 bushels per acre, however, at the higher fertility level the yields went from 71 to 97 bushels as the stand was changed from 7,100 to 17,700 stalks per acre.

This is what a farm yard looks like after a tornado has gone through. When this happened in Grundy county recently, 300 farmers pitched in to help their neighbors clean up. Right: the men worked in teams and are shown together on the Cherrie farm helping to remove some of the heavier debris. Seven farms in the county were leveled by the winds.

Sun-Times Photos

1300 HELP NEIGHBORS IN TORNADO DISASTERS

IT'S AN old story but it's always touching the way farmers turn out to help neighbors battered by misfortune, be it sickness, flood or tornado.

Big city dwellers who don't know their next door neighbors read with wonder and admiration the other day of the army of 300 Grundy county farmers who turned out to help their neighbors after a tornado swept through an area 1100 feet wide and seven miles long.

The howling wind twisted, smashed and destroyed practically everything in its path as it ripped across more than a score of farms. Seven farms were leveled.

Said one farmer looking over the ruin: "It took Pa 45 years to build. This happened in one minute."

When Farm Adviser M. E. Tascher appealed for help he expected about 50 farmers to show up on April 10. At 9 a.m. the roads near the elevator were packed with cars and trucks. There were at least 300. And they came not only from Grundy county but also from neighboring Will and Livingston counties.

There was plenty to do at home, there always is in April, but the men worked through Saturday and Sunday cleaning up. Some were ready Monday to finish the job. When a Chicago newspaper reporter asked a couple of farmers why they came to help. They looked surprised. "These folks are our neighbors," they answered a little puzzled that anyone should ask such a question.

ABOUT 1,000 farmers turned out in Champaign county at a call from their Farm Bureau to help farmers clean up in the Flatville-Gifford area after a tornado ripped across the county April 7. Five farms were badly damaged.

The "good neighbor" job was under the direction of Earl Bantz and J. Walker Robbins of the Farm Bureau office. The good neighbors turned out with saws, shovels, and trucks to move debris, fix fences, and patch buildings.

Robbins reported that the response was "wonderful." The women were there too, he said, and brought more food than the men could eat.

The next good neighbor task will be to help the storm victims get their spring crops planted. Some lost their farm machinery and will have to depend on their neighbors entirely.

Knowing Illinois farmers, they can be sure their faith in their neighbors is well founded.

NEW ERP HEAD REMEMBERED AS IAA CONVENTION SPEAKER

FARM Bureau people who attended the Illinois Agricultural Association annual meeting in 1944 may remember Paul Hoffman, president of the Studebaker Corporation, recently appointed director of the European Recovery Program.

At that time Hoffman was chairman of the Committee for Economic Development. He made a spirited address on the committee's plans for a high level of industrial production in the post-war period.

ERP provides a $6,098,000,000 program of assistance to Europe, China, Greece, and Turkey for a 12-month period. Additional appropriations are authorized through June 30, 1952 subject to annual congressional review.

Here, minus certain recent revisions, is the program which Department of Agriculture officials submitted to the State Department:

In the first crop year of ERP, 5,820,000 metric tons of breadgrains, valued at $536,000,000 (based on prices July 1, 1947) will be shipped abroad. Eligible nations will receive 146,000 tons of fats and oils, including butter, worth $80,000,000; 23,000 tons of meat (mostly horse meat) valued at $6,000,000; and $160,000,000 worth of dairy products or 375,000 tons.

Ships carrying ERP commodities will include in their holds 205,000 tons of tobacco — $210,000,000 worth — and 521,000 tons of cotton, set at $438,000,000 in value. Other fats [illegible] exports of 40,000 tons of cake and [illegible] 000 tons of rice. Other foods and feedstuffs expected to leave U. S. shores under ERP, include 1,125,000 tons of coarse grains; 198,000 tons of oil cake and meal, 138,000 tons of sugar; 121,000 tons of dried fruit, and 482,000 tons of peas and beans and fresh fruits.

Pure Milk Seeks Merger of Producer Co-ops

EXPANSION of Pure Milk Association to include all cooperatives and farmers supplying milk in the Chicago milk shed was advocated by General Manager A. H. Lauterbach at the recent 23rd annual meeting of PMA in Chicago.

Pure Milk Association, a producers' bargaining organization, is a member of the Illinois Milk Producers Association, an Illinois Agricultural Association affiliate.

Lauterbach mentioned specifically consolidation with the Pure Milk Products Cooperative of Wisconsin.

Speaking on farm price stabilization, the PMA general manager said: "All farmers should be members of at least one large general farm organization which truly represents farm people in Congress and the state legislature. After World War I, farmers' milk prices in the Chicago milk shed dropped from $3.75 to $1.50 per hundredweight."

Lauterbach pointed out that PMA progress for 1947 included the addition of 491 new members, a greatly expanded plant operation, and five million dollars more for members' milk.

In the principal address before the convention, John Brandt, president of the Land O' Lakes Creameries said, "Farmers' income will be better in 1948 than it was in 1947. Farmers' income must be high in order to keep the government on a sound financial structure. The basis of all sound finance in government is high farmer income. People that are happy when agricultural prices go down are foolish, for as agricultural prices go down so go all other prices in our economy."

Speaking on aid to Europe, Brandt said, "We must maintain a sound financial structure here at home before we spend money in aiding foreign countries. We can never conquer communism with a wall of gold."

The 2500 members from Illinois, Wisconsin, Indiana, and Michigan attending the meeting at the Hotel Sherman heard Treasurer W. E. Winn report an increase of $298,607.98 in net worth in 1947. "Pure Milk Association's net worth of $2,064,989 is divided between $698,826.64 in general reserve and $1,366,162.88 in plant fund," Winn said.

Director of Sales F. J. Knox reported that Pure Milk Association sold 1,735, 321,638 pounds of milk in 1947 compared with 1,645,695,396 pounds in 1946.

The daily average production of all PMA markets was 4,767,508, a daily increase over 1946 of 258,757 or 5.44 per cent. Twenty per cent of all milk produced by members was handled by PMA directly.

During the past year PMA put two additional receiving plants into operation at Kankakee and Gary, Ind. Another at Mazon opened March 1 of this year. Other PMA plants are at Chicago, Hinckley, Lisle, Richmond, St. Charles, and Kansasville, Wis., Orfordville, Wis., Salem, Wis., and Sharon, Wis.

Clarence Meyer, Peotone, was elected to the PMA board of directors to succeed W. M. Kimmelshue. Other Illinois members re-elected were: W.E. Winn, Richmond; Harvey Norem, Newark; and J. P. Case, Naperville.

Total membership of PMA is now 14,000 of whom 6475 are in Illinois.

Wilbur J. Swayer, Gurnee, was re-elected president of PMA at the first meeting of the board following the convention. Swayer has served as president since 1943.

Wilbur J. Swayer (left), president of Pure Milk Association, and Arthur H. Lauterbach (right), general manager, pin corsages on Blanche Snow (left) dairy queen of Kane county, Illinois, and Shirley Murdock (right) Walworth county, Wisconsin, during the annual meeting of the PMA in Chicago.

Below: The Milk Foundation exhibit was a popular place. Wonder if the free ice cream samples had anything to do with it.

CORRECTION

In an article entitled "War on the Corn Borer Menace" in the April issue of the IAA RECORD, the passage quoting Entomologist J. H. Bigger on DDT sprayed corn reading "it (is) not advisable yet to feed the corn to dairy animals until further experiments have been made;" should read, "to feed the corn fodder to dairy animals."

"SAY IT WITH Sales!"

Nation-wide American Dairy Association Advertising Increases Sales of Dairy Products

SAY IT WITH SALES . . . . Say it with ACTION! That's the dairy farmer's answer to profitable milk production. The American Dairy Association program of national advertising and merchandising for this year is by far the most comprehensive ever planned. Millions of consumers will see and read about the goodness of dairy products. Get behind and support your ADA sales promotion organization. It means greater prosperity for you and for your industry. June is the month for ACTION!

This program deserves support of all dairy farmers. Illinois Farm Bureau members shipping cream, and those shipping to condenseries and cheese plants should wholeheartedly get behind American Dairy Association along with the Illinois Milk Producers Association and Prairie Farms Creameries producers.

ILLINOIS MILK PRODUCERS ASSOCIATION AND PRAIRIE FARMS CREAMERIES

Pure Milk Seeks Merger of Producer Co-ops

EXPANSION of Pure Milk Association to include all cooperatives and farmers supplying milk in the Chicago milk shed was advocated by General Manager A. H. Lauterbach at the recent 23rd annual meeting of PMA in Chicago.

FFA students from Benton and other high schools were among 2000 farmers attending Swine Growers' Day at the University of Illinois. On tour of the College of Agriculture swine farm, students (top picture) look at sow with frisky pigs out on clean, dry cinder bed when adjacent ground was sea of mud; (center) measure sun shade mounted on skids used with straw roof for hogs on pasture, and (bottom) watch as William Marshall, assistant herdsman, sterilizes hog trailer with live steam.

BETTER WAYS TO RAISE HOGS

NEW ways to raise better pigs were presented to Illinois farmers last month by successful hogmen and college experts during the annual Swine Growers' Day program at the College of Agriculture.

A new and simple way to keep sow production records followed by the Illinois Swine Herd Improvement Association was explained by Wayne Brethorst, a farmer from Mahomet in Champaign county.

Brethorst said that pigs from each sow entered in the Association are weighed at about 56 days of age (weaning age). Litter records are kept by earmarking before the pigs are more than five days old.

At weaning time the rate of gain, size, and general health of a pig are pretty well established and the best pig at this age will probably make the best hog. At this time a farmer also can tell how well his sows have performed as mothers.

Association members are finding, Brethorst said, that one-fourth of their sows are producing one-half of the pig crop while three-fourths of the sows are raising the other half.

The Illinois Swine Herd Improvement Association was organized last year largely among Champaign county farmers under the leadership of Leslie Heiser, vocational agricultural teacher at Fisher. It is a non-profit association and dues are only $1.50 for each sow and litter. An office is maintained at Fisher.

The importance of keeping a record on a sow's performance was also confirmed by W. A. Craft, director of the Regional Swine Breeding Laboratory at Ames, Iowa.

In his talk Craft told of some of the results from the Regional laboratory where a gigantic swine breeding research program is being conducted.

More than 60 inbred lines have been started and 8,400 litters and 66,600 pigs farrowed at Ames and the other land grant colleges in the cornbelt cooperating in the work with the United States Department of Agriculture.

Craft mentioned the Minnesota No. 1 and No. 2 hogs which have resulted from this research. He said that they are finding that hybrid vigor appears to be as real in pigs as in corn although economic problems are more difficult to overcome than has been the case with corn.

If inbred lines and inbred crosses prove practical, breeding stock can be sold through breeders who will raise selected inbred lines to produce boars for farmers, Craft believes. There should be opportunity here for both small and large producers in that, he said.

Necro, a serious hog disease, is being brought under control by new sulfa drugs, Dr. C. C. Morrill of the College of Veterinary Medicine, reported. He said they have used sulfathalidine successfully on a number of infected pigs.

Morrill cautioned that the use of the drug cannot be expected to remedy a poor diet or reduce contamination in feed lots or hog houses, both causes of necro.

The few pigs that are still hopelessly stunted after an outbreak has been brought under control should be killed, he said.

During the morning tour of the swine farm the college had on display several pieces of equipment helpful in hog production.

One is a portable steam spraying outfit used to disinfect houses, feed troughs and other hog equipment. A second piece of equipment handy on a hot summer day is a portable sun shade with a wire and straw roof.

Wayne Brethorst, Champaign county farmer, shows how he weighs pig at weaning time. From litter weight sow's production record is established for Illinois Swine Herd Improvement Association.

The sows at the experimental station farm that had pigs old enough to be outside were housed in individual, sunshine-type hog houses that could open in front during warm weather. The sows were kept dry and free from mud while outside their pens by the use of a cinder bed.

Some of the farmers suggested that tailings or mine slack could be used equally as well for a temporary hog lot, and said they were going to try keeping their sows away from the mud by using cinders or a substitute when they got home.

Hog numbers will be down in Illinois from 10 to 15 per cent if farmers handle their spring pig crop as they indicated at the meeting.

J. A. Morgan, Homer, said: "We're not going to breed heavily for fall litters although we're going ahead with our spring crop. Hogs right now are just not paying the feed bill."

C. J. Sparks, E. St. Louis: "Hog numbers in my territory are down 10 to 15 per cent. Farmers sold old sows and culled pretty closely."

Ray C. Harding, Belleville: "I haven't cut down quite as much as my neighbors. Incidentally, I think there's more money in $22 hogs feeding $2.25 corn than $10 hogs and $1 corn. More dollars profit."

A pig creep ration being fed suckling pigs on rye grass seemed to meet with favor from hogmen. It consisted of cracked corn, 45.5 pounds; oat groats, 25; soybean meal, 12; meat and bone scraps, 12; alfalfa leaf meal, 5; iodized salt, .5.

For four years now farmers and ranchers have sold more livestock than they have raised. On Jan. 1 of this year they had the fewest head of livestock since 1939. In keeping with this trend many Illinois livestock men are reporting a spring pig crop of 10-15 per cent less than last year.

CASH ADVANCE ON NEW CLIP ANNOUNCED BY WOOL CO-OP

THE Illinois Wool Marketing Association has started to grade and store wool from the 1948 clip in its new warehouse at Paris in Edgar county.

As the first of the new wool crop comes in a schedule of advance payments on a complete line of various grades has been announced by Dale Rouse, manager of the wool growers' cooperative.

These are advance payments and will not be the total amount the producer receives for his wool.

A big share of the Illinois wool, about 60 per cent, will come under the grades of choice three-eighths combing and choice one-fourth combing on which the cooperative is advancing 40 cents a pound.

The advance prices per pound on the various grades are: Light fine, 30c; average fine, 25c; fine clothing, 25c; choice one-half combing, 35c; average one-half combing, 30c; one-half clothing, 30c; choice three-eights combing, 40c.

Average three-eighths combing, 35c; three-eighths clothing, 35c; choice one-fourth combing 40c; average one-fourth combing, 35c; choice low quarter, 40c; braid, 35c; medium burry-seedy, 20c; medium grey or black, 20c; karakul, 10c; dead, 20c; murrain, 7c; fine lamb, 25c; medium lambs, 20c.

JUNE 18 IS DATE SET FOR ANNUAL LAMB SHOW

THE 10th annual Chicago Lamb Show will be held June 18 at the Union Stock Yards in Chicago.

Cash prizes will be given in four classes of the contest. They are a single lamb class and pens of three, five and ten lambs. In the pen of three class, the show offers cash awards down to 25th place; on pens of five to 15th place; in pens of 10 there are eight awards; and 11 places in the single lamb class.

Several sheep breed associations will offer special prizes, and the exhibitor of the champion single lamb of the show and the boy or girl who shows the best pen of three lambs will receive the Pillsbury awards for agricultural achievement.

A sheep shearing contest will wind up the program and all exhibitors are eligible to compete. The winner receives a power-operated shearing machine.

Lambs placing below third will be sold by commission firms in the presence of their owners just as they are on the open market in Chicago.

Show officials announce that premium lists will be available soon, and that entries will close Monday, June 14. There is no entry fee. A similar show for market hogs has also been scheduled for Wednesday, Sept. 15.

IAA Director To Serve on State Poultry Committee

LYMAN BUNTING, member of the IAA board from Edwards county, has been appointed to the state poultry committee which will act in an advisory capacity for the poultry project to be carried on in Illinois under the Hope-Flanagan bill.

The state will appropriate money for the project which will be matched by federal funds under the Hope-Flanagan bill. The project will be under the direction of E. C. Secor, superintendent, division of markets, Illinois State Department of Agriculture.

Purpose of the project is to promote the marketing of a better product, and to develop a grading program and better marketing facilities. Research will be done by the University of Illinois. Committees will be appointed later for fruit and vegetable projects.

Other members of the poultry committee are: H. H. Alp, American Farm Bureau Federation; L. F. Stice, U. of I.; Sam Honneger, Forrest; Harold Templeton, Chain Store Council, Chicago; and C. C. Lovell, Galesburg.

SEEK RECORD CROP

The nation's farmers are again out after a billion bushel wheat crop. The Department of Agriculture estimates probable winter wheat production of 860,521,000 bushels and a possible spring wheat crop of 272,000,000 bushels.

FFA students from Benton and other high schools were among 2000 farmers attending Swine Growers' Day at the University of Illinois. On tour of the College of Agriculture swine farm, students (top picture) look at sow with frisky pigs out on clean, dry cinder bed when adjacent ground was sea of mud; (center) measure sun shade mounted on skids used with straw roof for hogs on pasture, and (bottom) watch as William Marshall, assistant herdsman, sterilizes hog trailer with live steam.

BETTER WAYS TO RAISE HOGS

NEW ways to raise better pigs were presented to Illinois farmers last month by successful hogmen and college experts during the annual Swine Growers' Day program at the College of Agriculture.

A new and simple way to keep sow production records followed by the Illinois Swine Herd Improvement Association was explained by Wayne Brethorst, a farmer from Mahomet in Champaign county.

Brethorst said that pigs from each sow entered in the Association are weighed at about 56 days of age (weaning age). Litter records are kept by earmarking before the pigs are more than five days old.

At weaning time the rate of gain, size, and general health of a pig are pretty well established and the best pig at this age will probably make the best hog. At this time a farmer also can tell how well his sows have performed as mothers.

Association members are finding, Brethorst said, that one-fourth of their sows are producing one-half of the pig crop while three-fourths of the sows are raising the other half.

The Illinois Swine Herd Improvement Association was organized last year largely among Champaign county farmers under the leadership of Leslie Heiser, vocational agricultural teacher at Fisher. It is a non-profit association and dues are only $1.50 for each sow and litter. An office is maintained at Fisher.

The importance of keeping a record on a sow's performance was also confirmed by W. A. Craft, director of the Regional Swine Breeding Laboratory at Ames, Iowa.

In his talk Craft told of some of the results from the Regional laboratory where a gigantic swine breeding research program is being conducted.

More than 60 inbred lines have been started and 8,400 litters and 66,600 pigs farrowed at Ames and the other land grant colleges in the cornbelt cooperating in the work with the United States Department of Agriculture.

Craft mentioned the Minnesota No. 1 and No. 2 hogs which have resulted from this research. He said that they are finding that hybrid vigor appears to be as real in pigs as in corn although economic problems are more difficult to overcome than has been the case with corn.

If inbred lines and inbred crosses prove practical, breeding stock can be sold through breeders who will raise selected inbred lines to produce boars for farmers, Craft believes. There should be opportunity here for both small and large producers in that, he said.

Necro, a serious hog disease, is being brought under control by new sulfa drugs, Dr. C. C. Morrill of the College of Veterinary Medicine, reported. He said they have used sulfathalidine successfully on a number of infected pigs.

Morrill cautioned that the use of the drug cannot be expected to remedy a poor diet or reduce contamination in feed lots or hog houses, both causes of necro.

The few pigs that are still hopelessly stunted after an outbreak has been brought under control should be killed, he said.

During the morning tour of the swine farm the college had on display several pieces of equipment helpful in hog production.

One is a portable steam spraying outfit used to disinfect houses, feed troughs and other hog equipment. A second piece of equipment handy on a hot summer day is a portable sun shade with a wire and straw roof.

Wayne Brethorst, Champaign county farmer, shows how he weighs pig at weaning time. From litter weight sow's production record is established for Illinois Swine Herd Improvement Association.

The sows at the experimental station farm that had pigs old enough to be outside were housed in individual, sunshine-type hog houses that could open in front during warm weather. The sows were kept dry and free from mud while outside their pens by the use of a cinder bed.

Some of the farmers suggested that tailings or mine slack could be used equally as well for a temporary hog lot, and said they were going to try keeping their sows away from the mud by using cinders or a substitute when they got home.

Hog numbers will be down in Illinois from 10 to 15 per cent if farmers handle their spring pig crop as they indicated at the meeting.

J. A. Morgan, Homer, said: "We're not going to breed heavily for fall litters although we're going ahead with our spring crop. Hogs right now are just not paying the feed bill."

C. J. Sparks, E. St. Louis: "Hog numbers in my territory are down 10 to 15 per cent. Farmers sold old sows and culled pretty closely."

Ray C. Harding, Belleville: "I haven't cut down quite as much as my neighbors. Incidentally, I think there's more money in $22 hogs feeding $2.25 corn than $10 hogs and $1 corn. More dollars profit."

A pig creep ration being fed suckling pigs on rye grass seemed to meet with favor from hogmen. It consisted of cracked corn, 45.5 pounds; oat groats, 25; soybean meal, 12; meat and bone scraps, 12; alfalfa leaf meal, 5; iodized salt, .5.

For four years now farmers and ranchers have sold more livestock than they have raised. On Jan. 1 of this year they had the fewest head of livestock since 1939. In keeping with this trend many Illinois livestock men are reporting a spring pig crop of 10-15 per cent less than last year.

CASH ADVANCE ON NEW CLIP ANNOUNCED BY WOOL CO-OP

THE Illinois Wool Marketing Association has started to grade and store wool from the 1948 clip in its new warehouse at Paris in Edgar county.

As the first of the new wool crop comes in a schedule of advance payments on a complete line of various grades has been announced by Dale Rouse, manager of the wool growers' cooperative.

These are advance payments and will not be the total amount the producer receives for his wool.

A big share of the Illinois wool, about 60 per cent, will come under the grades of choice three-eighths combing and choice one-fourth combing on which the cooperative is advancing 40 cents a pound.

The advance prices per pound on the various grades are: Light fine, 50c; average fine, 25c; fine clothing, 25c; choice one-half combing, 55c; average one-half combing, 50c; one-half clothing, 30c; choice three-eighths combing, 40c.

Average three-eighths combing, 35c; three-eighths clothing, 35c; choice one-fourth combing 40c; average one-fourth combing, 35c; choice low quarter, 40c; braid, 35c; medium burry-seedy, 20c; medium grey or black, 20c; karakul, 10c; dead, 20c; murrain, 7c; fine lamb, 25c; medium lambs, 20c.

JUNE 18 IS DATE SET FOR ANNUAL LAMB SHOW

THE 10th annual Chicago Lamb Show will be held June 18 at the Union Stock Yards in Chicago.

Cash prizes will be given in four classes of the contest. They are a single lamb class and pens of three, five and ten lambs. In the pen of three class, the show offers cash awards down to 25th place; on pens of five to 15th place; in pens of 10 there are eight awards; and 11 places in the single lamb class.

Several sheep breed associations will offer special prizes, and the exhibitor of the champion single lamb of the show and the boy or girl who shows the best pen of three lambs will receive the Pillsbury awards for agricultural achievement.

A sheep shearing contest will wind up the program and all exhibitors are eligible to compete. The winner receives a power-operated shearing machine.

Lambs placing below third will be sold by commission firms in the pres ence of their owners just as they are on the open market in Chicago.

Show officials announce that premium lists will be available soon, and that entries will close Monday, June 14. There is no entry fee. A similar show for market hogs has also been scheduled for Wednesday, Sept. 15.

IAA Director To Serve on State Poultry Committee

LYMAN BUNTING, member of the IAA board from Edwards county, has been appointed to the state poultry committee which will act in an advisory capacity for the poultry project to be carried on in Illinois under the Hope-Flanagan bill.

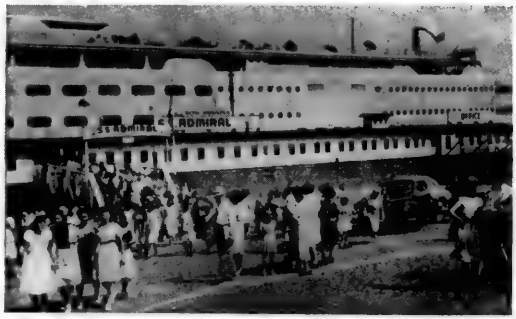
The state will appropriate money for the project which will be matched by federal funds under the Hope-Flanagan bill. The project will be under the direction of E. C. Secor, superintendent, division of markets, Illinois State Department of Agriculture.

Purpose of the project is to promote the marketing of a better product, and to develop a grading program and better marketing facilities. Research will be done by the University of Illinois. Committees will be appointed later for fruit and vegetable projects.

Other members of the poultry committee are: H. H. Alp, American Farm bureau Federation; L. F. Stice, U. of I.; Sam Honneger, Forrest; Harold Templeton, Chain Store Council, Chicago, and C. C. Lovell, Galesburg.

SEEK RECORD CROP

The nation's farmers are again out after a billion bushel wheat crop. The Department of Agriculture estimates probable winter wheat production of 860,521,000 bushels and a possible spring wheat crop of 272,000,000 bushels.



Rural Youthers from various Illinois counties disembark from the Admiral at St. Louis following excursion trip in 1947. The department of young peoples activities is offering assistance with these trips. See story on this page.

RURAL YOUTH

Rural Youth groups over the state soon will be making excursion trips on Lake Michigan and the Mississippi River. The office of Young People's Activities can be of service in providing boat or train schedules, and in coordinating county plans for tours with transportation companies in St. Louis or Chicago. If we can be of assistance, please notify.

THESE spring days remind us that growing plants are pushing from the soil and rapidly reaching toward the sun. From the soil they draw the chemical elements necessary for growth and it is there they anchor and establish themselves to do the job peculiar to their natures. From the sun they receive light which gives the power of photosynthesis, making possible marvelous chemical processes within the plants.

There is a parallel process in plant production to the life of Rural Youth members and their organizations. Just as the growing plant is related to soil and sun, just so are Rural Youthers related to the local organization and its activities and to the larger Rural Youth programs and organizations of district, of the state, and of the nation which are sponsored by Farm Bureau. County organizations, programs, and activities are basic to Illinois Rural Youth. It is there that individuals and groups are anchoring themselves to serve rural life.

But the individual and the local group are not self-sufficient. If they are to have the development which is rightfully theirs, they need the light which Farm Bureau programs and Farm Bureau groups outside the county can give them.

The Midwest Training School of the American Farm Bureau Federation will be held in St. Paul, Minn., June 27 to 30. Rural Youth delegates from nearly all the states of the Midwest, as well as national committee members from various other states, will be present in a youth conference. In December another Rural Youth conference will be held at Atlantic City as part of the annual meeting of the AFBF. These two youth conferences will effectively discuss problems of Rural Youth organizations. Each Rural Youth group in Illinois should send at least one delegate to these meetings. Anyone who has the privilege of attending will return a better informed person and a better Rural Youth member. If a thorough and clear report is given to the local group, and if new ideas are geared into action programs, there is no question about the value of such meetings for all in attendance.

E. D. Lyon, director young people's activities IAA, explains details of district, state, and national activities of Rural Youth to Peoria county members Dorothy McCullough and Walt Joos, and Assistant Farm Advisor, George Kemp (right), after addressing the Peoria group on this subject at a recent guest night meeting.

By ELLSWORTH D. LYON, Director

Young People's Activities

The IAA 1948 annual meeting will be held in Chicago Nov. 15 to 18. Each county should be represented by at least one boy and one girl at each IAA annual meeting with its talk fest, youth conference, skilled drivers' contest, delegate breakfast, and all the various general sessions, as well as the annual meetings of the cooperatives. Then if delegates would use the information gained by incorporating it in monthly programs, Rural Youth in Illinois would soon take a bigger place in supplying well informed county Farm Bureau leaders where a number of former Rural Youthers are now making a good name for themselves as Farm Bureau county board members, and as members of boards of cooperatives.

The IAA board of directors has already approved a short course for Rural Youthers at the home office for 1949. As in January of this year, each county will be permitted to send one delegate. The young men in attendance this year have been highly enthusiastic in their praise of this program for Rural Youth. We who are trying to serve Illinois farm families greatly appreciate the interest shown by all who enrolled for the short course.

District activities are very much a part of the work of the IAA. Rural Youth talk fests, such short courses as "Battling Brucellosis," skilled drivers' contests, and now sports festival events are available for farm youth at various times of the year on the district level. They are close enough to county groups for convenience in attending; yet they bring together the varied programs, and provide opportunity for the sharing of experiences for competition and for educational material for guiding rural young people in rural living and in rural community leadership.

Other activities outside the county could be mentioned, but the above suggest the many possibilities which Rural Youthers now have to enlarge their experiences. The combination of good county programs and the programs of Farm Bureau on the national, regional, and district levels should provide growing experiences for Illinois farm youth. In fact, good planning on the county level will include these wider and far reaching influences for the training of young farmers and farm leaders. Rural Youthers, keep your feet in the county soil but reach up for information. Such a combination will result in the fruits of personality growth and leadership development.

County Activity

South Cook planned thoroughly for their educational meeting on "Battling Brucellosis" held at Blue Island April 20. Dr. C. D. Van Houweling, director department of Veterinary Medical Relations IAA, county veterinarian Dr. C. B. Hostetler, and a local medical doctor, discussed this highly important subject with the south group.

Wabash went all out for a thorough discussion of syphilis and gonorrhea. Present to lead them in their discussion were the county health nurse and the local medical doctor.

Madison has just closed a big membership drive. They hope to hold the large additional membership by a more active program in the future. Coming up will be a community service project in leading recreation for annual meetings for various cooperatives in the counties. Wilbur Klueter is the president.

Follow this Plan!

THE BLUE SEAL SWINE FEEDING PROGRAM

1

Farrow Large, Healthy Litters.

Farrow large, strong litters. To do this a well fortified ration must be given the sow during breeding and gestation periods. Pig and Sow Supplement has been formulated to supplement farm grains in the ration of the sow to insure the greatest number of live, strong pigs at birth.

2

Wean a Maximum of Pigs Farrowed.

Profits depend on weight of litter at weaning time. This calls for a *large* number of *heavy* pigs. Proper nutrition is a very important factor. Start pigs eating as young as possible and feed the sow extra well throughout lactation. Balance farm grains with Pig and Sow Supplement and wean large litters of heavy, healthy pigs.

3

Grow out and Finish Economically.

A well balanced ration saves on farm grains—gives fast growth—economical gains. Feed pigs well all the way to market weight using 40% Hog Supplement on dry lot or 42% Pasture Supplement on pasture. These feeds balance the nutrient deficiencies of your farm grains which means cheaper gains and more profits.

Feed a well balanced ration. There are no short cuts to profitable hog production. Good feeding and management must be had at all times.

Summer Meetings for Farm Bureau Leaders Scheduled by AFBF

TWO programs of interest to Illinois Farm Bureau leaders will be held this summer under the sponsorship of the American Farm Bureau Federation.

The annual Midwest Training School will be held June 27-30 at the Lowry Hotel in St. Paul, Minn.

The annual Farm Bureau Institute will be held August 15-20 at the University of Illinois in Urbana-Champaign. No definite program has yet been arranged for the Farm Bureau Institute.

Among the speakers on the program at St. Paul will be Charles B. Shuman, president of the Illinois Agricultural Association; George E. Metzger, IAA secretary of organization and information; and O. D. Brissenden, IAA director of organization.

President Shuman will speak on "Explanation of Farm Commodity Programs," Secretary Metzger will discuss Farm Bureau personnel, and Director Brissenden will speak on organization problems. Chief topics for discussion on the program will be farm legislation and organization.

Dorward Named General Manager Of Pana Refinery

JACK G. DORWARD, petroleum sales manager for Illinois Farm Supply Company, has been named general manager of the Pana Refining Company plant at Pana, Illinois.

The refinery was bought recently by Illinois Farm Supply to increase its source of supply. Dorward replaces E. G. Youngberg, retiring manager.

Dorward has been employed by Illinois Farm Supply for more than 15 years. Before going to Chicago to head the petroleum sales department, Dorward was assistant to Morris Crandall at the Kingston Mines Terminal. Before that, he was manager for 4½ years of the Iroquois County Service Company. For four years prior to that he worked as a Farm Supply fieldman throughout the state.

Before he went into field work he managed the Macoupin Service Company for three years. His first connection with the organization was his employment by the McLean County Service Company.

Dorward is a graduate of Eureka College and has a masters degree in chemistry from Iowa State College.

9 Illinois Advisers Are Appointed to National Groups

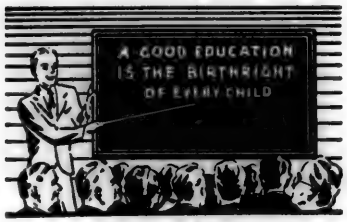
NINE Illinois county farm advisers have been appointed to 10 committees of the National Association of County Agricultural Agents for 1948.

W. B. Bunn, Champaign county, is serving as vice-chairman of the committee on professional improvement and also as a member of the livestock committee.

Other farm advisers and their committee membership include Edwin Bay, Sangamon, chairman of the committee on coordination with the U. S. Department of Agriculture; T. W. May, Madison, vice-chairman of committee on relations; O. O. Mowery, Macoupin, publicity; C. A. Hughes, Cook, city-county agents; W. F. Coolidge, Livingston, rural youth; C. E. Yale, Lee, vocational agriculture; Harold N. Myers, DeWitt, soil conservation; and L. E. McKinzie, Edgar, agricultural planning.

McKinzie is serving this year as president of the Illinois State Association of Farm Advisers.

Jerry Blanchard, Christian County organization director, signs LaVerne Buchter as Christian's 2000th member while M. E. Deal, president, and Ray High look on.



By JOHN COX
IAA Director of Rural School Relations

BONDED debt within the boundaries of a proposed larger school district should not prevent necessarily the establishment of the larger district.

Several larger districts have been voted down, when the entire bond issue if spread over the new district would have amounted to less than ½ of one per cent of the assessed valuation of the new district (the constitutional limit on bonded indebtedness is five per cent of the assessed valuation). This obligation would have been negligible on the tax bill.

Most bond issues run for 20 years, and a building 10 years old which has 10 years of bonds outstanding certainly offers a good deal more utility and service than a 25 year old building, bonds for which were retired five years ago.

Most of these buildings will be used in the larger district, the others sold and the proceeds credited to the larger district. If people wish to have the additional service of the newer building, then they should be willing to pay their part for such service.

The important consideration, is not the per cent of bonds yet to be paid or whether they have two or 18 years to run, but what per cent of the assessed valuation of the larger district would the bonds be when spread over the larger district and how much would that mean to them as taxpayers. Also they should consider the various educational and possible financial advantages which might result from cooperation with others to set up the larger district.

After reflecting upon some of our present limitations in school opportunities, the difficulty of securing good elementary teachers, the inequality of our tax system, it is sometimes difficult for even our most pessimistic doubters to paint a darker picture than the actual condition existing today.

We have been getting fair service out of a poor educational system and many inequalities. Surely school patrons can secure better service from a system adapted to modern needs and requirements.

Foes of Co-ops Spend $1,000,000

Latest figures on lobbyist registrations filed with the Clerk of the House of Representatives show that groups joined with the National Tax Equality Association spent $244,749 fighting cooperatives in 1947. When the more than $500,000 spent by NTEA is added, more than $1,000,000 annually is being spent to battle cooperatives.

This arresting shot of Eddie Doughty, son of the Eugene Doughtys of La Salle county, raiding the cookie jar wins our $5 Picture-of-the-Month award. This picture has good human interest and clarity.

★

Farmers Give Generously To Feed Europe's Hungry

FARM families in Illinois gave generously to foreign aid through their support of the Abraham Lincoln Friendship Train. Farm Bureaus helped collect $350,000 in cash or crops to be given for food to Europe's hungry.

In Illinois 60 counties gave toward the Friendship train. Most of the gifts were from farm families and most of the money collected by Farm Bureaus.

One county gave only CARE packages. Others gave carloads of food stuffs produced by Illinois farmers: corn, condensed milk, powdered milk, flour, seeds, lard, corn syrup, fats and oils, honey, soybeans. Many gave money.

A number of counties whose donations are not listed on the adjacent map had already given to a previous train. These counties are designated by three stars. Final returns from some counties have not yet been completed.

Overseas all food stuffs will be distributed by efficient, well-organized church agencies to persons of all religious faiths.

Contributions reported to date are as follows:

Adams	$ 5,367.31
Bond	3,660.13
Boone	4,000.00
Brown	4,100.00
Bureau	3,095.89
Carroll	*First Train
Champaign	9,600.00

WEAVER TO HEAD IOWA FARM LIFE INSURANCE

JOHN WEAVER, assistant manager of Country Life Insurance Company, took over his new job as manager of the Iowa Life Insurance Company on May 1. Weaver has been with Country Life for the past 18 years.

Weaver's duties will include supervision of all Farm Bureau insurance agents in the second largest state Farm Bureau in the nation. Iowa's recent rapid growth and increasing demands by farmers for insurance services presents a worthy challenge for Weaver's ability.

Just out of college, Weaver started with Country Life in 1930 as a statistician. During the recent war he served 3½ years with the navy and was discharged with the rank of lieutenant commander. Iowa Farm Life has $70,000,000 of life insurance in force.

Burridge D. Butler, 80, Prairie Farmer Owner, Dies in Phoenix

BURRIDGE D. BUTLER, 80, publisher of Prairie Farmer and president of radio station WLS, died March 30 at his winter home in Phoenix, Ariz.

Since the turn of the century he had been an energetic champion of agriculture through the columns of the Midwest's great farm paper and later through the channels of his radio station.

Butler was born at Louisville, Ky., and sold newspapers on the street corner as a boy. From then on he worked at many jobs—steelworker, printer, reporter, editor, and owner of 15 different newspapers before buying Prairie Farmer in 1909.

Services were conducted in Phoenix April 2. Mrs. Ina H. Butler survives her husband.

Sorrells Is Named Assistant to IAA Secretary of Marketing

SAM SORRELLS, southern Illinois livestock marketing fieldman, since 1940, has been transferred to the IAA division of marketing as assistant to Secretary L. L. Colvis.

In his new duties he will work on the new wool acquisition program now in progress, with locker companies in need of assistance in their new finance campaigns, and with other branches of the marketing department as the need arises.

Sorrells is a Montgomery county farmer who is a former member of the IAA board of directors, the St. Louis Producers board of directors, a former president of the Farm Bureau Serum board, and a former president of the Illinois Livestock Marketing Association board.

Get Soils Agreement At Your Farm Bureau

A new aid to soil conservation is now available in the form of a soil conservation agreement for rented farms. Agreement forms may be obtained at the county farm adviser's office or direct from the University of Illinois, Urbana. Distribution is made in pairs, one form for landlord and one for tenant at ten cents a pair.

MY TRACTOR has sold me on

ILLINI MOTOR OIL

for Tractor, Truck or Car

Keeps Resinous Formation at a Minimum

Hot oil oxidizes (breaks down), and forms sticky varnish or lacquer deposits on hot parts of the engine such as piston skirts and rings. Special additives in Illini oil keep this oxidation to a minimum.

Keeps a Clean Motor Clean Longer

Oxidized oil (resins or "varnish") forms a base which collects insoluble combustion products and causes a dirty engine. Illini motor oil, being highly resistant to oxidation, greatly reduces the possibility for an accumulation of combustion products. Illini keeps a clean motor clean longer.

Provides Better Piston Seal

Piston deposits directly interfere with good engine performance. Deposits in the ring zone cause sticking rings —resulting in rapid wear and loss of power. Illini motor oil fights piston deposits. Illini "stands up" under heat, is relatively nonvolatile, has a high viscosity index.

Prevents Bearing Corrosion

High heat makes many oils corrosive to bearing metals. This corrosion may result in bearing failures. Illini motor oil gives protection against bearing corrosion. In fact, Illini motor oil gives complete motor protection.

Gives Longer Life to Rings and Cylinder Walls

Illini provides more than ample film strength to take the heaviest bearing pressures and strongest piston side thrust your tractor, car or truck can build up. Illini is refined from the finest paraffin crude oils by the most modern methods, and reinforced with superior additives for the best in performance.

"Best Buy — ILLINI!"

Shelbyville Homemakers Fete Selves At Holiday Party

MORE than 100 members were present at the annual play day held in Shelbyville, Mar. 24, and carried out the theme of a Homemaker's Holiday. Each person present was dressed in housedress and apron with a ribbon in her hair.

After a morning filled with peppy songs, games, and stunts, everyone enjoyed the pot-luck dinner at noon.

Mrs. Velda Middleton and Mrs. Maude Scully, Home Bureau members entertained with humorous readings. The guest speaker, Mrs. Less Mass, past president of the State Federation of Womens Clubs spoke on "Life with the Indians." Her talk was illustrated with photographs, shawls, embroidery, pottery and other Indian articles. She carried everyone in imagination to the Indian reservations of southwestern United States. Mrs. Vaugie Jones, recreation chairman, was given a big vote of thanks for a most enjoyable day — Mrs. V. N. Shutt, County Publicity Chairman, Shelbyville, Illinois.

Stephenson County

At the March Stephenson County Home Bureau board meeting, Mrs. Sam Kloepping, county 4-H chairman in home economics, reported 19 clubs already planned for this year, one of which is a boys' home economics club.

More than 200 members of the 19 units of Stephenson County Home Bureau enjoyed the "Progress" Day program March 30. Mrs. Perry Cromley presided and Mrs. Roger Heitkam was program chairman. Recognition was given by Mrs. Judson Richards, vice-president, to new members — making the present total 416 members in the county.—Mrs. J. E. Yeager.

Home Adviser Changes

Miss Lucile Entsminger will take over her new duties as home adviser in Christian county on June 1. She has taught home-making in the Taylorville, Mason City and Farmer City high schools.

Mrs. Wanda Razor Dean is the new assistant home adviser in Woodford county. She has worked for an insurance company in Bloomington and as a stewardess for United Air Lines.

Miss D. Louise Rice is the new home adviser in Woodford county. She has been assistant home adviser in Bureau county.

Miss Ella Jane Fikuart started working this spring as the Clark county home adviser. She comes to Illinois from Lamar and Barton counties in Missouri where she was county home agent.

Have you a First Aid Kit in your home? And do family members make it a habit to use the kit when they receive even minor injuries?

Louis Hilthor receives trophy from McLean County Associate Farm Adviser Jack Stevenson after tractor operating contest in which Hilthor showed most skill in operating with efficiency and safety. John Kline placed second, and Allen Allers (right) was third.

TABLE OF DISTINCTION

Now you can begin to crochet a lace tablecloth, a treasure you may have wanted for a long time. There is no substitute for a hand-crocheted dinner cloth in lacy elegance and durability. A small, almost square motif of loops and clusters is the basic pattern for this lovely table covering. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

HOW DO YOU VOTE ON EASTERN TOUR?

ARE you planning to attend the American Farm Bureau convention to be held Dec. 12-16 in Atlantic City, N. J.? What would you like to see in the East?

The Illinois Agricultural Association has approved the idea of running a special train packed with Illinois folks heading for the convention. Railroads are now submitting itineraries for the trip.

What do you want to see? Washington? New York City? Mt. Vernon? Williamsburg? Independence Hall? Revolutionary War scenes? Gettsyburg? Tennessee Valley Authority? Florida?

If you have any ideas, let's hear from you. Write to Roy Johnson, Director of Special Services, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Ill.

Nut trees, especially black walnuts and pecans, can well be included on the Illinois farmstead.

for HOMEMAKERS

SWEATER BLOUSE

Skirts and blouses artfully combined give your wardrobe wide scope, from simple sports outfits to date attire. If you knit, make a pretty sweater blouse to top a velveteen or taffeta skirt. Make it soft rose or blue if you like delicate tones, or white or lime for drama. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio.

FRINGED OVAL RUG

This lovely hand-crocheted rug is made of cream and rust rug yarn. Crochet it of any two colors you like, add a decorative fringe to the outer edge. The lighter tone is worked in simple single crochet, the darker stripes are puff stitch. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

PLAID CAP

If you're on the youngish side you can wear this cute-as-a-button cap. Make it yourself from a yard of bright plaid or checked taffeta. It takes just two pattern pieces to make this pert headpiece — the rounded section and a long top piece that ties into a bow at the back. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

FARMERS ARE URGED TO BUY U. S. BONDS AS SECURITY 'EGG'

SECRETARY of Agriculture Clinton P. Anderson says he believes every farmer who possibly can will respond to President Truman's call for participation in the Security Loan drive now swinging into full stride. He stated:

"I believe they will do this because their good business sense dictates it. I believe they will do this because they will realize that Security Bonds will be a bulwark for their farms and their families against the impact of possible declines in income. They will buy Security Bonds because their duty to our nation's welfare impels them.

"For five consecutive years farm income has broken the previous year's record. 1947's crops brought an estimated 30 billion dollars. Despite the fact that operating costs advanced, there was still a substantial increase in net income over the prior year. The farmer, by putting some of this money into Security Bonds, can lay away a nest egg for the future."

Favorite Recipes

APPLE NODDLE PUDDING

Pudding
3¾ cups milk
½ cup brown sugar
¼ teaspoon salt
4 ounces fine noodles
3 eggs, separated
1 tsp. vanilla extract

Scald milk. Add brown sugar, salt and noodles. Cook over boiling water 20 minutes. Beat egg yolks. Add to noodle mixture while stirring. Cook 2 minutes stirring constantly. Add vanilla. Beat 2 egg whites. Fold gently into noodle mixture. Pour into greased square pan, 8 x 8 inches. Top with apple rings.

COUNTRY SAUSAGE

1 pt. of sausage cakes
1 cup tomato juice (or that amount of fresh tomato)
½ cup boiling water
1 onion
1 sweet pepper (if you have it)
½ teaspoon salt
½ teaspoon sugar
2 to 4 potatoes

Empty cakes in pan, heat, pour off fat, then add water and tomato, boil until sausage becomes tender, add onion, pepper, salt, sugar and halved potatoes, boil until tender from 20 to 30 minutes. (Add more water if needed.)

FARM RECORD BOOK IS BEING USED NOW BY 30,000 FARMERS

FARMERS say they like the new Illinois Farm Record Book distributed by the University of Illinois College of Agriculture this winter and spring.

More than 30,000 copies have been distributed by farm advisers, vocational agricultural teachers and G.I. instructors since the beginning of the year.

It is expected that the first printing of 50,000 copies will be exhausted by Dec. 1 of this year after orders have been placed from the southern half of the state. Distribution so far has been limited to northern Illinois.

The book is particularly helpful in setting up farm account records so that income taxes can be figured easily and accurately.

CITIZEN AWARD

The Iowa Farm Bureau Federation awarded a total of $1,000 to the four counties that did the best job of voting in the spring primary elections this year.

Gougler Receives First Retirement IAA Certificate

(*Continued from page 5*)

Gougler made virtually all of the surveys necessary to obtain information for the erection of these creameries. He conducted tours to other cooperative creameries then in operation. He arranged for most of the money in the respective creamery districts. He was a great stabilizing influence and relations man between the IAA and the various creamery boards. He was instrumental in the financing of the state creamery company by local plants.

After the creameries were well underway, a demand appeared in the state for cooperative frozen food locker plants. Gougler was assigned to that project. He again took care of most of the promotional work in connection with these locker plants. He assisted county Farm Bureaus in making the surveys for the raising of money for the construction of their plants, and again was a good public relations man between the IAA and the locker companies.

After the locker companies were in operation and satisfactory audits could be made of their business, he visited the various locker boards and assisted in analyzing their financial position.

The last piece of work assigned Gougler by the Illinois Agricultural Association was to make a survey and study of egg marketing. He completed that survey during the last week of his employment with the Association.

Mr. Gougler was highly regarded by the employees of the Illinois Agricultural Association. His honesty and integrity were above reproach. He was always a gentleman and a good citizen. He was firm in his convictions and was always thoroughly grounded in the Farm Bureau movement.

The best wishes of the entire staff of the Illinois Agricultural Association and of thousands of his Farm Bureau friends in Illinois go with him in his retirement.

Adolph helps his wife, a partner for 40 years, as they feed chickens and gather eggs during evening chores.

Southern Illinois Soil Conserver For Forty Years

(*Continued from page 12*)

Adolph's cattle herd is his pride and joy — and also a money maker. Last year he sold most of his spring calf crop off pasture for an average of $150 a head, a substantial income for the product of one beef cow.

Spitznass, friendly and enthusiastic, likes to talk about these cattle. But his deepest thoughts and feelings are saved for his green and productive hillside fields which today reflect the love and foresighted care given by this pioneer in soil conservation over a span of 40 years.

Dixon Springs Pasture Program For 125 Sheep

(*Continued from page 9*)

pound or $2237.40. The gross income in dollars and cents amounted to $39.59 an acre. In 1946 the gross income was $39.67.

The ewes are wintered on soybean hay supplemented with soybean and sudan grass silage when available. A month before lambing they are fed ¾ of a pound of oats and ¼ pound of soybean oil meal. (For other ewes on the station, corn is substituted for oats). Grain is continued until the sheep are turned out on pasture.

The ewes in the project have been western range sheep, bred to native Hampshire and Suffolk bucks. During the two years of the project they have raised from 140 to 150 lambs. During the winter months they are housed in inexpensive, well-ventilated sheep sheds.

In addition to sheep the station also maintains a herd of about 225 breeding cows. These cows and their calves have been found to be very suitable "machinery" for harvesting the pasture and forage crops produced.

The station takes advantage of the long pasture season which is southern Illinois' greatest farming asset.

It relies on small grain and grasses instead of cultivated row crops. The disk, and not the plow, is the important tillage tool. Erosion has been checked and gulleys have healed.

The soil is restored and enriched through long pasture rotations, application of lime and phosphate, and the seeding of legumes. In a practical and inexpensive way this project employs the sound practices that form the basis of pasture farming. It is a way of farming destined to grow in popularity.

HOW A FLY-FREE FARM MEANS GREATER PROFITS

TYPE	NUMBER	SUMMER PROD.	PERIOD	TOTAL PROD.	PRICE	VALUE	EST. INCR. WITH DDT	EST. INCR. INCOME
Dairy	10	20 lbs. per day	90 days	18,000 lbs.	$.04 lbs.	$720.00	10%	$72.00
Beef	12	1 lb. per day	90 days	1,080 lbs.	$.20 lbs.	$216.00	10%	$21.60
Hogs	50	1 lb. per day	90 days	4,550 lbs.	$.20 lbs.	$900.00	5%	$45.00
Poultry	150	½ egg per day	90 days	562½ doz.	$.25 lbs.	$140.63	5%	$ 7.03
								$145.63
Cost of 20 pounds of DDT 50 per cent wettable powder needed on average farm								10.00
Average cost of inexpensive knapsack or other type spray equipment								10.00
Extra profits from effective fly control program on typical Illinois farm								$125.63

MORTGAGE LIFTER

This is a picture of what your family may lose . . . if anything happens to you!

If you're paying off a mortgage on your farm, don't gamble with your family's future. It takes so little to insure their welfare, their home, should death deprive them of your help.

Country Life's "Home & Family Protector" costs so little, means so much, when years of hard work and planning stand between you and a final mortgage clearance. It means that the home you've been building together will be theirs . . . making it easier for them to carry on alone, if necessary.

Ask your friendly Country Life counselor to explain what the "Home & Family Protector" plan can do for you. Guarantee your family's future.

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

TWENTY MILLION DOLLARS!

By President Charles B. Shuman

TWENTY million dollars every week! That is the extra toll taken from the livestock farmers' pockets by the meat processing and distributing industries since early in April. The reason given by the trade for this deplorable condition has been the packing-house workers' strike. This seems to be a flimsy excuse when we realize that total slaughter tonnage was reduced little more than 10 per cent.

Lest there be some question as to the accuracy of this startling charge, it may be well to examine the facts. Every farmer knows that livestock prices at the farm have taken a terrific nose-dive since the peak period in January of this year. As of the first week of May, top hogs are down approximately $7 per hundred and choice steers are off almost as much from the January high.

Prices of other classes of livestock have not been so drastically cut, but have been substantially reduced. If we apply a conservative average price reduction to the average national weekly marketings, we find that farmers are realizing twenty million dollars less each week for the same tonnage of livestock. Who gets the twenty million? Have retail meat prices paid by the consumers been reduced?

With the exception of a few cuts of pork, retail prices were actually higher than they were in January. In other words, livestock prices are much lower, while retail meat prices are steady or higher. Wholesale prices of meats also remain at a high level.

Admittedly, our calculations are of the two plus two nature, yet when twenty million dollars per week is taken off farmers' prices and at the same time retail prices climb, there can be but one conclusion . . . . . Our present system of distribution has failed in its primary function of reflecting changes in supply and demand conditions.

Throughout this senseless strike period, the Illinois Agricultural Association and the American Farm Bureau Federation used every practical means of urging an early settlement of this struggle for power. Appeals were made to leaders of both sides of the issue and to the President of the United States.

We were informed by the packers that they were protecting farmers' interests, as wage increases would come out of our prices. Twenty million dollars per week is a rather high price to pay for protection! The union, on the other hand, was not justified in the arbitrary course that it pursued.

Farmers can draw only one reasonable conclusion. We must continue to encourage the decentralization of the meat industry. We must find new ways to encourage increased competition in the field of processing and distribution. We should carefully examine the possibility of moving into these fields with our farmer cooperatives.

The Illinois Agricultural Association RECORD is published monthly by the Illinois Agricultural Association at 1501 W. Washington Road, Mendota, Ill. Editorial Offices, 43 East Ohio St., Chicago, Ill. Entered as second class matter at post office, Mendota, Ill., Sept. 11, 1936. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1935. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 43 East Ohio St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578. Undeliverable copies returned under Form 3579 to editorial offices, 43 E. Ohio St., Chicago 11, Ill.

Rural Youthers Visit Canada

FIVE Illinois young farm people have returned from a visit to Canada and a taste of our neighbor's hospitality. It was a wonderful trip. The Illinois Rural Youthers will never forget the courtesy, the good will, and the hospitality of the Canadians.

Under the sponsorship of the Illinois Agricultural Association the Illinois young people with the IAA director of young people's activities attended the annual meeting of the Junior Farmer's Association of Ontario. The meeting was held April 25-27 at the Ontario Agricultural College at Guelph.

The Junior Farmer's Association is an organization of Ontario young people from the age of 18 to 28. Membership is 10,500. Other Rural Youth representatives from Iowa and Michigan attended the meeting.

The five Illinois young people were Ruth Huser, Tazewell; Edna Dew, Ogle; Rex Emory, McDonough; Glenn Niehaus, Montgomery; and George Matthews, Whiteside.

Greatly appreciated was the beautiful non-sectarian worship service which began the Junior Farmers' annual meeting. Each part of the service including the address and the music by the Sincoe county youth choir was done by the members of the conference.

The Junior Farmer's Association of Ontario is only about five years old but growing rapidly. A member proves his earnestness by participation in activities and by assisting the younger farm boys and girls above 12 years of age in their project work. This is equivalent to 4-H projects in the United States.

The girls become members of the Junior Women's Institute through their projects. These projects are followed to completion at six of the 12 monthly meetings of the Junior Farmer's Association. The boys take up practical studies in their Association meetings. To illustrate, such topics as the following are found in their handbook: "The Use and Care of Farm Machinery, "Crop Rotation," and the activities of the various commodity groups of the Ontario Federation of Agriculture. By these topics it is evident that some of the educational meetings are held separately for boys and girls. Recreation following is held jointly.

It was noted in this meeting as well as in conversation that there was a combination of the practical, cultural, and inspirational aspects of life. Chorus and quartet music was much in evidence at the Guelph meeting and there was much talk of music for county meetings. President Reek of the Ontario College challenged the young folks to get as much as possible of the good in life from their local meetings and from the resources of the Ontario Agricultural College. Dr. George I. Christie showed pictures and lectured on soil conservation. Slides were shown upon farm machinery.

In the tours of the Women's Institute, the young ladies were shown three different types of kitchen which may be used to the advantage of the farm homemaker.

Facts pointed out by the young men of the Junior Farmers in the tour of the college farm indicated they had lived close to the practical in their local studies. They talked with understanding of the Shorthorn, Ayrshire, Jersey, and Holstein cattle being produced at the college and over the province of Ontario. The same was true of the Clydesdale horses and hogs produced from crossing the Yorkshire breed with the English white. The aim in Ontario is to produce a bacon type hog weighing from 180-210 pounds. The English white boar at the college, now weighing 1,000 pounds though not fat, is an important factor in this production through the cross with the Yorkshire. This cross is important in the elimination of rhinitis because it tends to produce a hog with a straighter nose than is found in the Yorkshire. Hogs are fattened on barley mixed with wheat and concentrates.

The Ontario Agricultural College has a beautiful herd of Shorthorn cows. This herd is being produced from bulls imported from Scotland and costing $10,000 and $18,000. Brown Swiss cattle are now being produced in Ontario. Some herds are being developed from Illinois herds.

The experimental plots at O.A.C. were used for seed development rather than as test plots for plant foods in the soils as is done in the Morrow Plots at the University of Illinois. However, the college is attempting to find out why sweet clover does not grow in Ontario.

At the Federation of Agriculture office in Toronto we heard the story of the development of organized agriculture in Ontario. There we found men who sacrifice their time and give their full attention to agriculture just as is done in Illinois by our own leaders. The Federation has 88 members on its board, six of whom are Junior Farmers. There are 14 people making up the executive board and one of these is a Junior Farmer.

We hope that some day we can try to match the fine courtesy of the youth and adult leaders of the Junior Farmers and of the Federation of Agriculture. We were guests of the Junior Farmers at a hockey game in Toronto, and guests of the Federation of Agriculture at a luncheon.

By ELLSWORTH LYON, Director

THE Illinois Agricultural Association and Farm Bureau members in Illinois are very much interested in the conservation of our soil and in the development of governmental programs which will provide every practical incentive to encourage farmers to use better soil management practices. We appreciate the importance to the nation as a whole of an expanded soil conservation program. For many years our organization has cooperated with the College of Agriculture, the Extension Service and the Soil Conservation Service of our state in promoting better land use programs as they have developed.

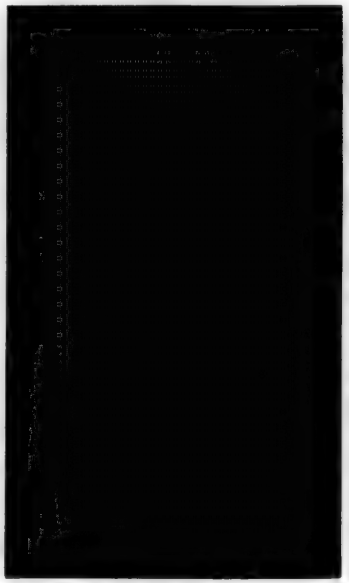
At the present time, there is a satisfactory spirit of cooperation between the various individual agencies working with these programs in Illinois. However, under the present system, there is considerable duplication of effort by these various agencies of government.

Duplicates Work

For example, research work on soil conservation projects is being carried on by the College of Agriculture experiment stations and also by the Soil Conservation Service. Soil conservation educational work is conducted by three agencies of government — the Soil Conservation Service, the Agricultural Extension Service and the Production and Marketing Administration. It is our firm conviction that there should be a definite correlation of the soil conservation activities in government so that this duplication of effort can be eliminated.

We have carefully studied the various proposals to coordinate the activities in the field of soil conservation. Years of experience have convinced us that the most successful governmental programs

Following is the position of the Illinois Agricultural Association on the National Land Policy Bill as presented in a statement to the House Committee on Agriculture May 14 in Washington by IAA Vice President Floyd E. Morris of Sangamon county.



dealing with agriculture have been those which are decentralized and have a maximum of local control. H. R. 6054 proposes to increase rather than decrease the centralized control in Washington of these programs.

We believe that this bill provides for too much centralization of control in the Secretary of Agriculture over the various agricultural programs dealing with conservation, improvement and development of agricultural land and water resources.

Another danger that we see in this proposed legislation is in the provisions to bring the so-called action agencies and programs, together with educational activities, all under the proposed new federal bureau. We believe that action programs should be definitely separated from educational activities. We are certain that coordination of activities can be obtained without establishing any new bureau or administration.

Seeks Better Bill

The Illinois Agricultural Association fully supports the suggestions of the American Farm Bureau Federation for an improved soil conservation program. We believe that the research activities of the soil conservation service should be transferred to the long established research agencies at state and federal levels. We further believe that educational work for all agricultural programs should be conducted by the Extension Service. We are very much opposed to the proposals in H. R. 6054 which establish a new Agricultural Resources Administration under the Secretary of Agriculture, with no provision for eliminating the existing duplication and conflict in these fields of research and educational work.

Concentrates Power

Again I want to repeat that the proposals in this legislation are exactly opposite to the position of the Illinois Agricultural Association in that it proposes even greater centralization of power and authority in the federal government through the Secretary of Agriculture. We are very strongly opposed to combining the action and educational agencies under one bureau. We favor a realistic reorganization to make use of already existing agencies. We insist that nothing should be done which will further confuse farmers' thinking in connection with a program of such vital importance as the soil conservation program. The Soil Conservation Districts in Illinois are doing an excellent job and they must not be hampered by further centralization of authority. Farmers themselves must be encouraged to take even greater responsibility for guiding the progress of these essential local organizations.

We respectfully urge that Congress enact such legislation as will give maximum control of the conservation programs to the states. We very strongly oppose the enactment of H. R. 6054.

American Farm Bureau Federation officials testify in Washington April 29 at a hearing on the 1949 U. S. Department of Agriculture budget. Right, foreground, is Illinois Senator C. W. Brooks. Center is AFBF President Allan B. Kline. In row behind Kline are, left to right: Lowell Steen, president, Oregon F.B.; H. A. Praeger, president, Kansas F.B.; IAA President Charles B. Shuman; H. L. Wingate, president, Georgia F.B., and Don Parel, AFBF Washington office.

JUNE IS DAIRY MONTH

SPORTS FESTIVAL interest at pre-season HIGH

BOWLING is taking the early season spot light in the rural sports parade that will climax in the state-wide Illinois Farm Sports Festival Aug. 26-27 at Champaign-Urbana.

Teams from more than 60 counties had their caps set for a state bowling championship as they completed district run-off play last month. The high teams and individuals in all of the 16 districts will bowl in the state finals. A complete listing will be printed when all scores are in.

The Farm Bureau Baseball League will start soon with 25 counties making plans to enter teams. New entries in this year's league include Boone, Christian, Lake, and Rock Island. Champaign and Henderson, champion and runner-up in last year's festival, will be back to defend their titles.

Interest in softball also continues to grow throughout rural Illinois, Roy Johnson, secretary of the Sports Festival, reports. He says that 83 teams have already been entered and estimates this number will grow to 200 by August.

District competition will be held in softball for the Rural Youth and boys 4-H teams with the 32 winning teams competing at the Sports Festival. District play will also be held if entries in softball exceed 32 teams in the all-county division, 16 in the 35-ers, 16 in girls 4-H, and 16 in the girls open class.

Individuals and groups who plan to enter any sport or festival event are urged to contact their farm or home adviser as soon as possible. In order to plan district festivals all entries in the dance, dramatic, and music events must be made before July 15. Softball entries must also be made well in advance of the Sports Festival in order that arrangements can be made for necessary district play-offs. The deadline for softball entries will be announced soon.

The folk festival, which includes dance, dramatic, and music features, promises to bring forth an array of new talent. From 29 counties come entries for 30 folk dance teams, 29 square dance teams, and 14 barber shop quartets. To this must be added 32 county rural choruses and 8 county 4-H choruses already reported by E. G. Regnier and R. G. Haley, University of Illinois Extension Service, as ready to enter groups.

Haley, State Rural Chorus director, is holding a series of meetings to organize district folk festivals. These will be held if possible during July 20- Aug. 5. All entries receiving an A rating at these district contests will be eligible to enter the state festival.

Counties will earn points for taking part in the county and district festivals as well as in the finals at the state festival.

At the Sports Festival a trophy will be awarded the winning county. Trophies also will be awarded the county highest in sports events and the county highest in folk festival events. Trophies also will be given winners in baseball, trap shooting, skeet shooting, and to winners in each of the 16 districts.

In the district bowling contests the high score so far in the men's open class has been made by Ogle county with 2716 points. Russell, Will county, and Kaney, Ogle are tied for individual honors with 610 points. In the women's class DeKalb leads with 2108 points. Frey of Ogle county has high individual score of 472.

The men's Rural Youth team in Bureau county is ahead in that division with 2420 points. Canterbury, Sangamon, 524 points, is leading individual.

The girls' Rural Youth team in DeKalb county is leading with a score of 1956. Individual winner is Kruse, Tazewell, with 434. Fayette county is leading the Rural Youth Mixed doubles with a score of 945.

Listening to Earl C. Smith, (wearing coat) Pike county, former IAA president, discuss the Illinois road situation at the IAA offices in Chicago before the IAA's Road Survey Committee are, left to right: Emery Irwin, Petersburg; Ed Niehaus, Butler; Robert Schubert, Mt. Carroll; Virgil Milner, Fairfield; Ronald Holt, Galva; and Committee Chairman K. T. Smith, Greenfield.

IAA SURVEY COMMITTEE

Analyzes Illinois Rural Road Problem

IAA EX-PRESIDENT EARL C. SMITH TELLS GROUP PROBLEMS ARE "MANY AND PERPLEXING"

IMPROVEMENT of Illinois farm roads will be no easy task, Earl C. Smith of Adams county, former president of the Illinois Agricultural Association, told a group of farmers in Chicago recently.

The group was the IAA Road Survey Committee, recently appointed to make a detailed study of the rural road situation. The committee will make recommendations to the IAA board of directors based on its findings.

Two of the first speakers to appear before the committtee were Former President Smith and Prof. Ellis Danner of the University of Illinois College of Engineering.

"Too many of us," Smith said," expect good roads tomorrow. The IAA has long been interested in road improvement. But rural road problems are many and perplexing. And solutions for these problems are difficult to find."

Smith explained that farmers backed the bond issues for Illinois' primary system of hard roads. When these laws were passed, he continued, rural people were told they would receive help from the state in constructing and maintaining access roads once the primary system was built.

Today, more than half the road district roads, Smith said, are still primitive dirt. There are thousands of unsafe bridges in need of immediate attention. Smith told the 20-man committee the most serious problem to be faced is that of revenue. The state primary road system is in a critical condition. The secondary system is in need of extensive repair.

The state highway department, the counties, and the cities each are asking for at least one billion dollars. Where does the farm-to-highway road fit into the picture? Rebuilding primary and secondary roads and the providing of all weather roads in road districts probably will call for a 20-year program.

Smith called upon the committee to present the facts, then demand satisfaction. The stock argument, he said, against the use of motor fuel funds on farm roads has been that they bear such a small portion of the traffic. Counts show more traffic on these roads than was thought, Smith said.

"The overall problem," Smith concluded, "is enormous. But the farmers of Illinois must stand ready to offer constructive suggestions."

Professor Danner discussed some of the engineering aspects on the need for research on the construction and maintenance of farm roads. He pointed out that the type of topography, climate, and traffic, as well as other factors must be considered before satisfactory roads can be economically supported in any road district. He said that many of the present road failures are due to frost and heavy truck traffic.

He told the committee that 500 vehicles a day will cause a good gravel road to become unpassable in a short time. One thousand vehicles a day will cause the same condition on the thin black top roads.

Professor Danner pointed out that one of the biggest steps forward in the improvement in road district roads would be the reorganization of many small districts into larger road districts.

Danner pointed out also that although a great deal of research has been done on hard road problems practically none has been done on farm roads. Industry, he said, puts enormous sums into solving their difficulties by research. He said, however, that no money was available to the college of engineering for study of farm roads.

Some of the problems, studied at least in part by the committee so far, are: 1. Continued state grants for farm-to-highway roads. 2. Reorganization of small township road districts into larger units. 3. Construction, required right-of-ways, administration, finance, and maintenance of primary, secondary, and township roads. 4. Current abuse and violation of the refund provision of the motor fuel tax law. 5. Weights, lengths, and speed of trucks and buses on Illinois highways. 6. Present and future legislation concerning farm-to-highway roads.

Most farmers are agreed on the need for a long-range continuous program for farm roads financed in part by state money. Local property taxes finance 75 per cent of the road mileage in Illinois' present farm-to-highway roads. Farmers look to the road committee to point the way to a better country road system at a reasonable price.

Traffic Commission Hears IAA on Roads

STATEMENT ASKS REASONABLE GAS TAX INCREASE FOR RURAL ROAD MAINTENANCE

THE interest of farm people in Illinois in good roads is of long standing. At each annual meeting for more than 25 years, the voting delegates of the Illinois Agricultural Association have adopted resolutions on some phase of the subject of primary, secondary and farm-to-highway roads. The Association supported the state bond issues for highway purposes and the enactment of the gasoline tax.

It has opposed efforts to reduce motor vehicle license fees and has opposed the diversion of motor vehicle tax revenues to non-highway purposes. It has opposed increases in the axle weights of buses and trucks permitted to operate over our public highways. It has endeavored to support legislation for the protection of our highway system and to secure funds to build that system.

Thousands of farm homes are mudbound during certain seasons each year. Our state primary road system and much of the state aid system is in need of reconstruction and repair. Many bridges are no longer useable and must be replaced. Increased demands are made upon our highway system.

The solution of the problems raised can be reached only upon the basis of a study of all of the facts of the situation.

1. Road District Reorganization

There are over 1600 separate local road districts in Illinois. Their road mileage and their financial ability varies greatly. Some have very good road systems. But for years, the cost of administration, labor, and machinery has made it financially impossible for a large number of these districts to improve and maintain their roads or to repair culverts and bridges.

Over half of our local farm roads are still primitive dirt. Hundreds of bridges and culverts on these roads are in critical need of attention. Rural people in many areas believe that overhead cost could be substantially reduced, the caliber of road district personnel improved, and more money made available for actual road and bridge construction and maintenance if township road districts and road districts in commission governed counties were combined into larger units for road and bridge improvement and maintenance.

Every possible economy should be effected. We urge that consideration be given by your commission toward the possibility of road district administrative and financial reorganization.

2. Increase in Motor Fuel Tax

Since the approval of the $60,000,000 hard road bond issue in 1918 and the $100,000,000 bond issue in 1924, the farmers of Illinois have been paying their portion of motor license fees for the construction of state hard roads.

Above is a statement on highway problems by the Illinois Agricultural Association to the Illinois Highway and Traffic Problems Commission. It was presented April 19, 1948 in Springfield by Paul E. Mathias, IAA secretary. This statement is based on policy resolutions adopted by the delegate assemblies at IAA annual meetings.

No part is available for local townships and road district roads. The Association would not be opposed to a reasonable increase of the present three cent motor fuel tax. However, we believe that a substantial portion (not less than one cent) of any such increase should definitely be allocated for use on local roads and bridges other than those now in the state and county system.

3. Weights of Trucks and Buses

Illinois now faces a critical hard road problem. In recent years there have been spectacular increases in motor vehicle traffic. Conditions on the roads and streets of the state have become worse, especially during the war years. Traffic volumes of heavy trucks and buses have reached unprecedented levels.

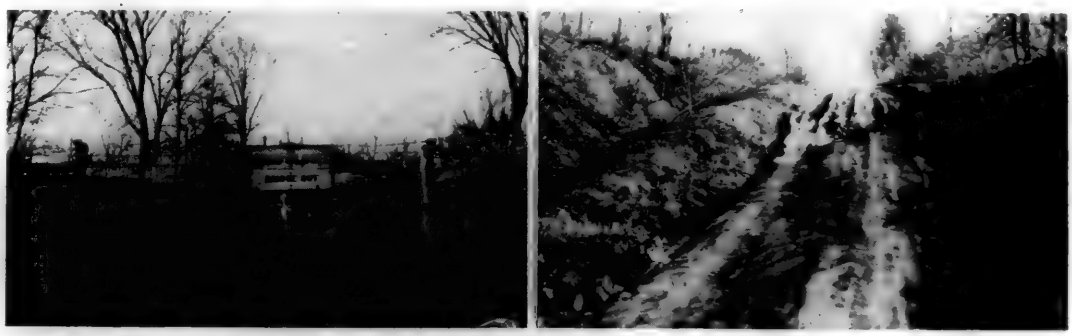
While heavy trucks and buses constitute but a small proportion of the total traffic on our highways, they are responsible for much of the wear and destruction of our highway system.

The Association is opposed to any increase in the load limits for buses and trucks beyond the maximum weights our highways were designed to carry. Many such highways are inadequate for the maximum loads now permitted by law. We also urge strict enforcement of the law relating to the length, weight, and speed of trucks and buses.

4. Secondary Roads Standards

The standards of design and specifications fixed for farm-to-market roads often result in a width of right of way and an unnecessarily expensive type of

(*Continued on page* 34)



You don't need to travel far in Illinois to find worn out bridges and battered roads.

Listening to Earl C. Smith, (wearing coat) Pike county, former IAA president, discuss the Illinois road situation at the IAA offices in Chicago before the IAA's Road Survey Committee are, left to right: Emery Irwin, Petersburg; Ed Niehaus, Butler; Robert Schubert, Mt. Carroll; Virgil Milner, Fairfield; Ronald Holt, Galva; and Committee Chairman K. T. Smith, Greenfield.

IAA SURVEY COMMITTEE

Analyzes Illinois Rural Road Problem

IAA EX-PRESIDENT EARL C. SMITH TELLS GROUP PROBLEMS ARE "MANY AND PERPLEXING"

IMPROVEMENT of Illinois farm roads will be no easy task, Earl C. Smith of Adams county, former president of the Illinois Agricultural Association, told a group of farmers in Chicago recently.

The group was the IAA Road Survey Committee, recently appointed to make a detailed study of the rural road situation. The committee will make recommendations to the IAA board of directors based on its findings.

Two of the first speakers to appear before the committtee were Former President Smith and Prof. Ellis Danner of the University of Illinois College of Engineering.

"Too many of us," Smith said," expect good roads tomorrow. The IAA has long been interested in road improvement. But rural road problems are many and perplexing. And solutions for these problems are difficult to find."

Smith explained that farmers backed the bond issues for Illinois' primary system of hard roads. When these laws were passed; he continued, rural people were told they would receive help from the state in constructing and maintaining access roads once the primary system was built.

Today, more than half the road district roads, Smith said, are still primitive dirt. There are thousands of unsafe bridges in need of immediate attention. Smith told the 20-man committee the most serious problem to be faced is that of revenue. The state primary road system is in a critical condition. The secondary system is in need of extensive repair.

The state highway department, the counties, and the cities each are asking for at least one billion dollars. Where does the farm-to-highway road fit into the picture? Rebuilding primary and secondary roads and the providing of all weather roads in road districts probably will call for a 20-year program.

Smith called upon the committee to present the facts, then demand satisfaction. The stock argument, he said, against the use of motor fuel funds on farm roads has been that they bear such a small portion of the traffic. Counts show more traffic on these roads than was thought, Smith said.

"The overall problem," Smith concluded, "is enormous. But the farmers of Illinois must stand ready to offer constructive suggestions."

Professor Danner discussed some of the engineering aspects on the need for research on the construction and maintenance of farm roads. He pointed out that the type of topography, climate, and traffic, as well as other factors must be considered before satisfactory roads can be economically supported in any road district. He said that many of the present road failures are due to frost and heavy truck traffic.

He told the committee that 500 vehicles a day will cause a good gravel road to become unpassable in a short time. One thousand vehicles a day will cause the same condition on the thin black top roads.

Professor Danner pointed out that one of the biggest steps forward in the improvement in road district roads would be the reorganization of many small districts into larger road districts.

Danner pointed out also that although a great deal of research has been done on hard road problems practically none has been done on farm roads. Industry, he said, puts enormous sums into solving their difficulties by research. He said, however, that no money was available to the college of engineering for study of farm roads.

Some of the problems, studied at least in part by the committee so far, are: 1. Continued state grants for farm-to-highway roads. 2. Reorganization of small township road districts into larger units. 3. Construction, required right-of-ways, administration, finance, and maintenance of primary, secondary, and township roads. 4. Current abuse and violation of the refund provision of the motor fuel tax law. 5. Weights, lengths, and speed of trucks and buses on Illinois highways. 6. Present and future legislation concerning farm-to-highway roads.

Most farmers are agreed on the need for a long-range continuous program for farm roads financed in part by state money. Local property taxes finance 75 per cent of the road mileage in Illinois' present farm-to-highway roads. Farmers look to the road committee to point the way to a better country road system at a reasonable price.

LETTERS TO THE EDITOR

GOOD FOR CLINTON

PLEASE accept my congratulations on the fine write-up in the May RECORD you gave the soil erosion control work being done in Clinton county.

Sam Sorrells
Montgomery County

KEEP RADIO STATUS QUO

I UNDERSTAND you favor raising 50,000 watt radio stations to 75,000 watts as you think they would reach more farmers. These big stations don't broadcast local farm news.

Our small stations are the ones that furnish us general and local farm news.

Leave the 50,000 watt stations as they are.

Albert E. Debatin
Clinton County

THANKS TO IAA

I THINK we on the committee all owe the IAA and Mr. Lyon (director, young people's activities) a big thanks for making our trip to Canada possible.

It certainly was a new and interesting experience for all of us and one I am sure we won't forget for a long time.

The Junior Farmers of Ontario have a good solid organization and we surely received some good ideas from them to bring home.

Our committee had the opportunity to meet and make new friends across the border. Sometimes I believe making friends is more important than anything else in life.

To me this exchange of young people from one state to another and from one nation to another is only a small part in creating good feelings among states and nations. Is it a small contribution toward peace among nations? It's only a drop in the bucket, but I feel if such an exchange program could be carried on on a larger scale, not only by our farm groups but other organizations it would tend to make a more secure world for all of us. That's reaching for a star I guess, but I'd rather have a star to reach for than a war to stare me in the face.

I'd like to thank the IAA for the opportunity of going to Canada and for the other benefits we have received from them. I only hope I can live up to what the IAA expects of the committee members.

Edna Dew
Ogle County

THE PLEASURE'S MUTUAL

JUST a line to say how much we enjoyed the visit of the Illinois Rural Youth Group to our conference and annual meeting at Guelph, Ontario, Canada. You certainly made a fine contribution to our conference, and I might say, left a wonderful impression of the rural young people of Illinois.

I hope all arrived home safely, and were not too tired after the strenuous week. I will try to keep you informed as to the activities of our organization during the next year.

Ross Beattie, President
Ontario Junior Farmers' Association

CATCHING FISH

Here's part of a letter from Frank Gougler, who retired in March from the IAA marketing department. We are pleased to hear from Frank.

THE Sunday following my departure from the office Ida and I took a three weeks vacation in Oklahoma and even got down into Texas.

I must tell you of my fishing experience. It was the best I have ever had. After fishing

TRADITION OF THE RIVER

The crew of the BLUE SEAL, Illinois Farm Supply Company towboat, saved a seaman recently when the NATCHEZ, a steamer, sank with the loss of 13 lives in the flood waters of the Mississippi. Louis Keeling of the NATCHEZ was rescued after he had been in icy waters almost five hours. Following is a letter of appreciation written by the owners of the NATCHEZ.

I WISH to extend to you and the personnel of your vessel, the BLUE SEAL, the sincere appreciation of all the officials and employees of this corporation in the heroic efforts and great assistance extended to us in the recent tragic accident to our steamer, the NATCHEZ. The spirit demonstrated exemplifies the true spirit of camaraderie and tradition of the river.

A. C. Ingersoll, Jr., President
Inland Waterways Corporation

TO THE PRESIDENT

Mr. Charles B. Shuman, President
Illinois Agricultural Association
Dear Mr. President:

The writer was very much embarrassed the other day at a meeting of the executive committee of the Champaign County Farm Bureau when our Farm Adviser reported that you had been bothered by a fly in a diner while passing through Champaign county. It was the first complaint our Fly-Rat Committee had had, and, speaking for the committee, I wish to apologize for the incident because it happened in Champaign county. Still speaking for the committee, however, I wish to deny, first of all, that this fly was ours, and to further substantiate this denial, I will tell you a short Chicago story.

The time is mid-March and all insects that normally hibernate are just waking up. It so happened that a fly and a flea met in a flue and the following conversation took place.

The fly said to the flea, "Let us fly". The flea said to the fly, "Let us flee". So they fled thru a flaw in the flue. Being still cold, they both took a flyer for Dixie. The flea took an upper, but the fly, being smarter, took the diner. That, Mr. President, was probably the fly you saw.

I am still sorry the incident had to happen in Champaign county because, as you have indicated, it reflects on the work of our Committee.

J. Walker Robbins
Champaign county

FROM THE PRESIDENT

Mr. J. Walker Robbins, Chairman
Fly-Rat Eradication Committee
Champaign, Illinois
Dear Mr. Robbins:

I appreciate very much your letter of explanation as to the origin of the fly which rode with me on the diner through Champaign county. Your conclusions seem to be quite original and I am willing to accept this explanation. I have no first hand knowledge as to the wisdom of the fly to which you refer.

I certainly do want to commend the Champaign County Fly and Rat Eradication Committee for their worthwhile objective. My past experience in Champaign county would indicate that you have plenty of work to do before your goal is attained!

I have no doubt but that you will be successful, especially after observing the membership of your committee. Certainly with a committee made up of men of such capabilities, no fly, flea or rat will dare remain in Champaign county!!

Charles B. Shuman, President
Illinois Agricultural Association

YARDSTICK for SUCCESS

By LEW REISNER

Field Editor, IAA RECORD

WHAT chance has a veteran to make a success of farming? More than 15,000 ex-G. I.'s in Illinois receiving on-the-job training and federal aid as hired men and self-employed farmers are asking themselves this question.

Probably no one is better fitted to help them with the answer than M. L. Mosher who has worked for 32 years with Illinois farmers and their farm records.

Mosher has observed the records of thousands of Illinois farmers in his position as head of the Farm Bureau Farm Management Service, a project of the College of Agriculture department of agricultural economics, University of Illinois at Urbana.

He has found that through the years certain traits of character and methods of farming are common among the most successful farmers.

These guideposts can help veterans decide whether their personal characters, financial backing, and farming set-up are such to insure a successful life as an Illinois farmer, Mosher believes.

It's just not possible to predict for each veteran whether he will succeed as a farmer. But Mosher estimated that eight out of ten will be successful if they have a chance to get started.

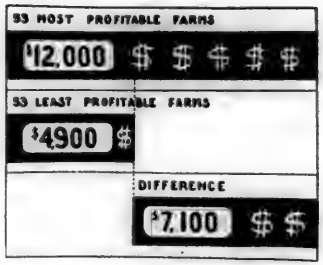
But first, Mosher often asks G. I. classes, what constitutes a success?

Farming at its best provides, Mosher says, these basic needs: a modern home for every farm family, including the tenants and hired men; all weather roads; modern grade and high school education; hospital and medical service; good churches with a resident pastor; a program of recreation, and last, farming at its best provides for old age security.

"Successful farmers I have known who provide these needs for their families generally feel that their life as a farmer has been well rewarded," Mosher has found.

And now, what traits of character do most outstanding farmers have that young men should look for in themselves? The following are the ten Mosher considers most important.

First of all, Mosher says, most successful farmers have a love for farm work and farm life and have wives who share this love with them. They take pride in their work.



What makes one farm more profitable than another? Much is due to the farmer himself, part to factors beyond his control. Chart shows earnings of 53 most profitable farms at $12,000 and 53 least profitable farms at $4,900 from a total of 265 record keeping farmers in North-Central Illinois. Years were 1944-45-46, three high-farm-profit years.

Successful farmers study their farm business constantly. One of the most useful tools a farmer owns is his lead pencil, Mosher has observed. They attend field meetings, read bulletins, are alert to new developments.

They stay with chosen plans rather than jump from one project to another. In a year like the present a farmer who is a heavy hog raiser may cut down but he won't go out of the hog business.

The most successful farmers practice kindliness with livestock. They are quiet around their stock and in general are kindly men. They keep things clean and neat. In a practical way this reduces farm accidents and helps control animal diseases.

They are good neighbors. Sooner or later nearly every farm family suffers a serious accident — sickness, storm damage, a fire — and the good neighbor is remembered and helped. They have the will to do a good job and they are thrifty. The family sized farm does not allow for extravagant spending, Mosher has concluded.

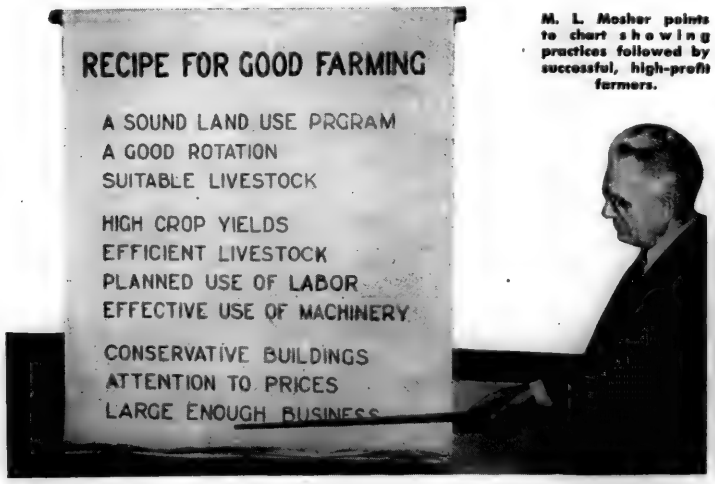
In regard to thrift, and saving, Mosher says the best farmers set aside savings from good years to spend on modernizing the house and providing for those things necessary to provide a successful farm life.

"You can't do this and pay for highly inflated land, expensive farm buildings and machinery beyond the needs of the farm. Neither can you support the liquor industry or pay gambling debts at the expense of the family welfare."

In the recipe for good farming (see picture) Mosher says most important to many veterans is getting a large enough business for a good family living.

"Many veterans are buying farms that are just too small to support a family decently. They are buying them to qualify for an extra two years of federal aid

(*Continued on page* 34)



M. L. Mosher points to chart showing practices followed by successful, high-profit farmers.

Here Are Two Ex-GI's Who Have A Good Chance To Enjoy a Rich,

PROFITABLE FARM LIFE

★

Top. Ralph Lammle proves ex-G.I. farmers aren't just loafing. Here he is busily hauling manure with help of brother Henry, right, plus two tractors, spreader, and loader. Bottom. Wayne and Ann Meister proudly show Marshall Scott, left, voc. ag. teacher at Fisher, litter of 14 Yorkshire pigs from registered sow.

★

See the article on preceding page for standards for successful farm life.

THE big problem for Ralph Lammle, 26, who farms near Fisher, lay in finding a farm to rent. Farms are at a premium in this rich corn and soybean country. This was solved when he bought out his father who had been on the same rented farm for 39 years.

Lammle spent between six and seven thousand dollars in livestock, machinery, and grain. His father backed him. He also received help under the GI bill as a self-employed veteran. This entitled him to a maximum of $90 a month.

Two years of bumper crops and high prices have put Lammle on top financially. His GI classes have given him a chance to mix with other young farmers and learn new ideas quickly.

"Ralph has farming on his mind so strongly it wakes him up in the middle of the night," his wife, Darlene, a pretty city girl from Chicago Heights, said recently.

Young Lammle is lean, hard, and quick. In the army he advanced from private to a first lieutenant platoon leader in a light tank outfit. He saw months of hard fighting, was wounded once, fought from Normandy across Europe to Germany.

The biggest change Lammle has made since he took over has been to switch to a three year corn-oats-hay rotation. He plants on the contour even though his land slopes very gently.

Other changes, Lammle contemplates, most of them first discussed in the GI class at Fisher, include an expanding livestock program, 50 acres planted to the new Mindo oat variety, 20 acres of ladino-alfalfa-brome pasture, hay stored in wire bins shaped like a silo (for air drying and curing.)

WAYNE Meister, 26, who also farms near Fisher, was resting in his bunk in a quartermaster outfit here in the states (he never got across), paging through a copy of a midwest farm magazine, when he lit on an article about raising Yorkshire hogs.

"Right then I got interested. I guess I must have been tired of so many people around always sounding off!"

Meister had everything against him. He had little farm experience, was reared in the city, and didn't have the money to make a start. His immediate problem was to learn the intricate business of farming.

His wife, Ann, came to the rescue. She grew up on a farm and her father was willing to help.

When they started on the 100 acre farm near Fisher owned by Ann's father they "really pioneered", at least as far as Ann is concerned. The house, small and in poor repair, had no conveniences except electricity.

Young Meister, a husky six-footer, started from scratch. He has learned almost all he knows about farming from the GI on-the-job training class in Fisher and from his father-in-law, an experienced farmer.

Ann and Wayne now have a herd of 60 Yorkshires, a bacon breed popular in Canada, which Meister believes will grow in numbers in this country.

Meister plans to concentrate on his hog enterprise. His sows are all from advanced registery stock and are entered in the Illinois Swine Herd Improvement Association.

He got his backing from his father-in-law who employs him on a regular salary, the pay being in feed grains rather than cash. From his GI classes Meister got his ideas for row cropping and contour farming. He is also starting on a three year rotation, still new on many corn belt farms.

Meister praised the way the GI school has been directed at Fisher by Marshall Scott, the vocational agricultural high school teacher there. Meister feels, as do many veterans, that the public is often unaware of the value veterans have received from well-run GI classes.

YARDSTICK for SUCCESS

By LEW REISNER
Field Editor, IAA RECORD

WHAT chance has a veteran to make a success of farming? More than 15,000 ex-G. I.'s in Illinois receiving on-the-job training and federal aid as hired men and self-employed farmers are asking themselves this question.

Probably no one is better fitted to help them with the answer than M. L. Mosher who has worked for 32 years with Illinois farmers and their farm records.

Mosher has observed the records of thousands of Illinois farmers in his position as head of the Farm Bureau Farm Management Service, a project of the College of Agriculture department of agricultural economics, University of Illinois at Urbana.

He has found that through the years certain traits of character and methods of farming are common among the most successful farmers.

These guideposts can help veterans decide whether their personal characters, financial backing, and farming set-up are such to insure a successful life as an Illinois farmer, Mosher believes.

It's just not possible to predict for each veteran whether he will succeed as a farmer. But Mosher estimated that eight out of ten will be successful if they have a chance to get started.

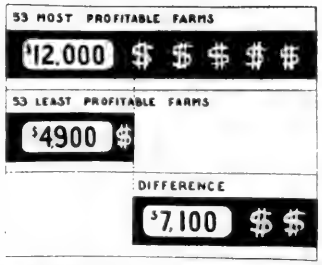
But first, Mosher often asks G. I. classes, what constitutes a success?

Farming at its best provides, Mosher says, these basic needs: a modern home for every farm family, including the tenants and hired men; all weather roads; modern grade and high school education; hospital and medical service; good churches with a resident pastor; a program of recreation, and last, farming at its best provides for old age security.

"Successful farmers I have known who provide these needs for their families generally feel that their life as a farmer has been well rewarded." Mosher has found.

And now, what traits of character do most outstanding farmers have that young men should look for in themselves? The following are the ten Mosher considers most important.

First of all, Mosher says, most successful farmers have a love for farm work and farm life and have wives who share this love with them. They take pride in their work.



What makes one farm more profitable than another? Much is due to the farmer himself, part to factors beyond his control. Chart shows earnings of 53 most profitable farms at $12,000 and 53 least profitable farms at $4,900 from a total of 265 record keeping farmers in North-Central Illinois. Years were 1944-45-46, three high-farm-profit years.

Successful farmers study their farm business constantly. One of the most useful tools a farmer owns is his lead pencil, Mosher has observed. They attend field meetings, read bulletins, are alert to new developments.

They stay with chosen plans rather than jump from one project to another. In a year like the present a farmer who is a heavy hog raiser may cut down but he won't go out of the hog business.

The most successful farmers practice kindliness with livestock. They are quiet around their stock and in general are kindly men. They keep things clean and neat. In a practical way this reduces farm accidents and helps control animal diseases.

They are good neighbors. Sooner or later nearly every farm family suffers a serious accident — sickness, storm damage, a fire — and the good neighbor is remembered and helped. They have the will to do a good job and they are thrifty. The family sized farm does not allow for extravagant spending, Mosher has concluded.

In regard to thrift, and saving, Mosher says the best farmers set aside savings from good years to spend on modernizing the house and providing for those things necessary to provide a successful farm life.

"You can't do this and pay for highly inflated land, expensive farm buildings and machinery beyond the needs of the farm. Neither can you support the liquor industry or pay gambling debts at the expense of the family welfare."

In the recipe for good farming (see picture) Mosher says most important to many veterans is getting a large enough business for a good family living.

"Many veterans are buying farms that are just too small to support a family decently. They are buying them to qualify for an extra two years of federal aid

M. L. Mosher points to chart showing practices followed by successful, high-profit farmers.

Here Are Two Ex-GI's Who Have A Good Chance To Enjoy a Rich,

PROFITABLE FARM LIFE

★

Top. Ralph Lammle proves ex-G.I. farmers aren't just loafing. Here he is busily hauling manure with help of brother Henry, right, plus two tractors, spreader, and loader. Bottom. Wayne and Ann Meister proudly show Marshall Scott, left, voc. ag. teacher at Fisher, litter of 14 Yorkshire pigs from registered sow.

★

See the article on preceding page for standards for successful farm life.

THE big problem for Ralph Lammle, 26, who farms near Fisher, lay in finding a farm to rent. Farms are at a premium in this rich corn and soybean country. This was solved when he bought out his father who had been on the same rented farm for 39 years.

Lammle spent between six and seven thousand dollars in livestock, machinery, and grain. His father backed him. He also received help under the GI bill as a self-employed veteran. This entitled him to a maximum of $90 a month.

Two years of bumper crops and high prices have put Lammle on top financially. His GI classes have given him a chance to mix with other young farmers and learn new ideas quickly.

"Ralph has farming on his mind so strongly it wakes him up in the middle of the night," his wife, Darlene, a pretty city girl from Chicago Heights, said recently.

Young Lammle is lean, hard, and quick. In the army he advanced from private to a first lieutenant platoon leader in a light tank outfit. He saw months of hard fighting, was wounded once, fought from Normandy across Europe to Germany.

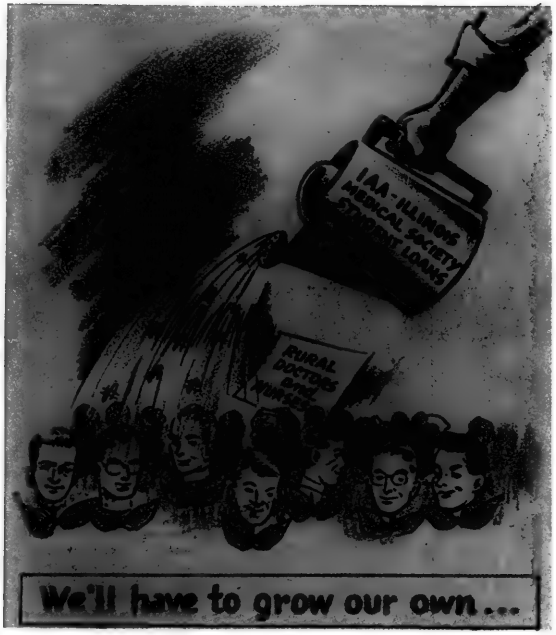
Better Medical Care For Rural Areas

Loans to pre-medical farm youth and new hospitals for country areas should spell improved health for Illinois farm families.



THE joint student loan fund committee of the Illinois Agricultural Association and the Illinois Medical Society will meet June 19 to review applications for loans to pre-medical students.

The IAA and the Illinois Medical Society have set up a student loan fund for pre-medical students who promise to practice in an Illinois community of 5000 or less for five years following their internship.

Four candidates for the loans are to be selected. To be eligible an applicant must have completed his college pre-medical work with good grades, and must have the endorsement of his county Farm Bureau and local medical society.

Applicants from 20 counties where the need for country doctors is greatest will be given preference. The counties are: Calhoun, Johnson, Pulaski, Jasper, Schuyler, Fayette, Scott, Washington, Bond, Cumberland, Jo Daviess, Clark, Clay, Edwards, Hancock, Brown, Hardin, Effingham, Jersey, and Pope.

The fund will advance $1,000 annually over a period of five years to the students chosen by the committee. Young men interested in the fund should contact their county Farm Bureau and get their applications in to I. E. Parett, Secretary of General Services, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois, by June 16.

The student loan fund is the result of a question farmers have asked themselves for at least a quarter of a century: "Where will we find another doctor?" The answer they have decided is: "We will have to grow them ourselves."

"There is no way any governmental agency can furnish rural areas with doctors farmers want," Dr. Harlan English, chairman of the Illinois State Medical Society's rural medical service committee, said recently. "So farmers must grow their own. The same is true of nurses. If farm families want nurses in their areas, it will have to be their own daughters who take up nursing."

Dr. English pointed out that city-bred doctors and nurses just won't go to rural areas. Rural doctors and nurses must, therefore, come from the country.

Secretary Parett said there is an excellent future for doctors in rural areas. During the depression many doctors deserted the rural areas for the cities. Few returned. Now the field is wide open. Farmers have the ability to pay in all sections of the state. A doctor establishing a practice in the country would be making a good move from a humanitarian viewpoint and a good move from a business standpoint, Parett explained.

The future also looks bright for the establishment of hospitals in country towns. Twenty-five will be finished in southern Illinois within the next five years, under the Federal Hospital Survey and Construction Act. Three million dollars has been appropriated by the federal government for the construction of hospitals in rural centers. The money is to be matched by the local and state governments 2 to 1.

Parett pointed out that these hospitals will be complete about the time the present applicants for the funds finish their education.

A number of applications coming in indicate that some are confused about the provisions of the loan fund, Parett said. He advised all applicants to get preliminary information from their county Farm Bureaus and local medical societies.

Parett said some of the applications emphasized the great need for vocational guidance in our high schools. He said too many students don't know until too late what sort of a career they plan to follow.

Farmers Should Stick Together

—DIRECTOR, CULNAN

Son Tommy, 5, watches Dad tune up the lawn mower motor before doing the weekly trimming chore.

By JIM THOMSON
Ass't. Editor, IAA RECORD

A HUNDRED years ago a potato famine swept Ireland. As the famine grew worse thousands fled to America.

Because of that remote event, Farm Bureau has a strong supporter today on a 200-acre Logan county farm. And he's not a bit sorry about the potato famine, because it brought his four grandparents to one of the most fertile farming areas in Illinois. (Logan county farmers maintain their land is the best in the state. And the University of Illinois soil map classifies Logan as the No. 1 county in soil types).

Descendant of these sturdy pioneers is Edward Thomas Culnan, Illinois Agricultural Association director from the 17th district. He has represented the counties of Woodford, Livingston, McLean, Ford, and Logan since 1946 when he succeeded Charles Lauritzen of Livingston county.

He still farms the 40 acres his grandfather bought in 1865 and the 160 he added in 1871. Culnan was born five miles east of Lincoln. Forty-nine years ago he moved with his parents to the home place five miles southeast of Lincoln. He has been there ever since. As he grew to manhood he worked in partnership with his father operating 200 acres of the homestead and 200 rented acres.

The IAA director took over alone when his father died in 1941. He bought out the interest of one brother and two sisters in the home farm last March.

He finished 10th grade in rural school and was graduated in 1919 from the Lincoln Business College. While working a short time with the McGrath Sand and Gravel Company of Lincoln, Culnan's boss kept referring to him as "Ted". He has been Ted to his friends ever since. He left his job with McGrath when his father became ill and never went back.

A cash grain farmer, Director Culnan would like to do a lot more feeding and some grazing. He feels, however, that outside activities do not give him the time to give proper care to animals. He fed cattle six or seven years but quit when his father died.

He raises a few hogs, keeps two cows and a few chickens. These are mainly for his own family use.

Proud and thankful of his heritage of good farming land, Culnan is determined to pass it along to his children in as good, if not better, condition than he received it. (An adjacent farm sold for $454 an acre during World War I). Soil care is a never ending task with him. After raising soybeans during the war years he has decided to outlaw them from his farm. Culnan feels that the soybean tends to loosen the topsoil too much so it can easily be swept away by high winds or washed away by heavy rains.

No organic matter on the Culnan farm is burned. Straw, corn stalks, cobs, everything is plowed under. Every acre has been limed and half of the farm has been treated with phosphate.

Culnan's father became a charter mem-

This is the 15th in a series of articles to further acquaint you with the men who represent you on the Illinois Agricultural Association board of directors.

IAA Director E. T. Culnan loads his spreader with cobs (left) to haul to the fields. Center: he repairs a cornstalk cutter while son Tommy and Logan County Organization Director Ray Schillings look on. Right: he works on an income tax return with the aid of his electric adding machine. Culnan works on about 120 farm income tax returns each year.

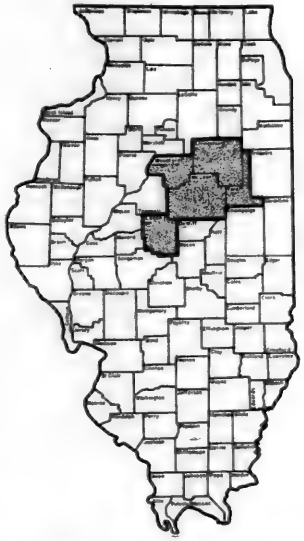
ber of the Logan County Farm Bureau in 1918. He joined his father in 1927 in a joint membership. About 1930 he took a lively interest in Farm Bureau affairs during some open forum meetings at Lincoln to discuss farm problems. Shortly afterwards he was elected director of the local cream pooling station sponsored by Farm Bureau.

In 1934 Culnan was elected chairman of his township corn-hog committee and was a member of the county committee a number of years. He also has been connected with the Logan County Agricultural Conservation Association.

Fourteen years ago Culnan was elected to the Logan Farm Bureau board and in 1943 was named chairman of the business service committee. He has been board secretary since 1945. Since 1938 he has been president of Logan Producers Supplies, a co-op dealing in Farm Bureau serum, seed, and seed inoculation.

He became a member of his county cold storage locker board in 1938 when it was organized. He resigned in 1946 and is now a member of the state locker board. He has been township school treasurer since 1937 and is treasurer of his community consolidated school district.

One of Culnan's proudest achievements was his move to better the schools of his community and the wide interest it caused. Back in 1940, he and F. C. Sparks, decided there was need of larger school districts in Logan county. This was some time before the organization of county school survey committees. Seven school boards were called together to discuss the matter. The move caused the Bloomington Daily Pantagraph to editorialize that some men in Logan county had taken the first progressive step in the reorganization of their schools and that the move would bear watching throughout Illinois.



Shaded area outlines the 17th district which is represented on the Illinois Agricultural Association board of directors by E. T. Culnan of Lincoln.

Culnan has been chairman of the Logan County Farm Bureau Income Tax Service Committee for the past seven years, which assists farmers in making out their income taxes. He still averages about 120 returns a year.

Culnan is a director of the Producers Hybrid Seed Company at Piper City and is a member of the Sangamon Valley Farm Bureau Farm Management Service.

Since 1927, as a sort of hobby, he has kept an account of his daily activities. He can, for instance, tell you how many hours his 21-year-old tractor has run in the fields and elsewhere and at what cost.

The IAA director was married in January, 1938 to the former Marie Plut of Lincoln. They have three children — Jane, 9; Anita, 7; and Thomas Edward, 5.

In Lincoln, Culnan belongs to the Elks lodge, Knights of Columbus, and St. Mary's Catholic Church.

"Farm Bureau," Culnan says, "is a great thing for farmers. Everything else in our economy is organized. So it is only common sense for farmers to stick together. Farm Bureau does much that the average member doesn't hear about but it helps the farmer make a better living just the same. My father was 100 per cent a Farm Bureau cooperator. I hope I can live up to his principles as a good Farm Bureau farmer."

Prairie Farms Manager Resigns

DAVE HENRY has resigned as sales manager for Prairie Farms Creameries to join the H. C. Christians Company of Chicago. He will be in charge of sales in the cheese division.

As the RECORD goes to press Henry's successor has not yet been hired. Forrest Fairchild, plant manager at Bloomington, will stay at the Chicago office two days a week until a new manager is named.

Henry had been sales manager for two years, succeeding J. B. Countiss who left Prairie Farms Creameries to become sales manager for a large hybrid seed corn producer and distributor.

Henry joined the IAA staff in 1940. Entering the army in 1941, he was granted a leave of absence by Prairie Farms Creameries where he had supervised the butter laboratory in the Chicago cutting plant and directed campaigns to improve butter quality. At the time of his discharge Henry held the rank of lieutenaut colonel.

Henry is a graduate of South Dakota State College and Ohio State University in dairy manufacturing and dairy technology. He has worked in several creameries in South Dakota.

How Much Does It Cost To Dry Corn?

HOW much does it cost to dry corn? The U. S. Department of Agriculture has just released results of tests it made last fall and winter on high-moisture ear corn.

Fuel and power costs ranged from 2½ to 7 cents a bushel and raised the value of the corn from 20 to 70 cents a bushel.

Lincoln Courier Photo

One of the youngest ever to pay a Farm Bureau membership at the Logan County Farm Bureau office was Edwin LaBaw. He is shown as he dashed in to pay a membership for his grandmother, Mrs. Gary LaBaw. Clerk is Mrs. Florence Jaggi.

Prairie Farms Manager Resigns

DAVE HENRY has resigned as sales manager for Prairie Farms Creameries to join the H. C. Christians Company of Chicago. He will be in charge of sales in the cheese division.

As the RECORD goes to press Henry's successor has not yet been hired. Forrest Fairchild, plant manager at Bloomington, will stay at the Chicago office two days a week until a new manager is named.

Henry had been sales manager for two years, succeeding J. B. Countiss who left Prairie Farms Creameries to become sales manager for a large hybrid seed corn producer and distributor.

Henry joined the IAA staff in 1940. Entering the army in 1941, he was granted a leave of absence by Prairie Farms Creameries where he had supervised the butter laboratory in the Chicago cutting plant and directed campaigns to improve butter quality. At the time of his discharge Henry held the rank of lieutenant colonel.

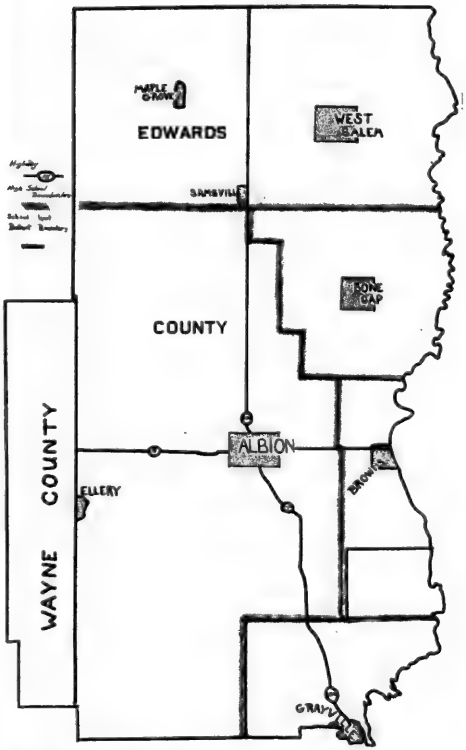
Henry is a graduate of South Dakota State College and Ohio State University in dairy manufacturing and dairy technology. He has worked in several creameries in South Dakota.

How Much Does It Cost To Dry Corn?

HOW much does it cost to dry corn? The U. S. Department of Agriculture has just released results of tests it made last fall and winter on high-moisture ear corn.

Fuel and power costs ranged from 2½ to 7 cents a bushel and raised the value of the corn from 20 to 70 cents a bushel.

One of the youngest ever to pay a Farm Bureau membership at the Logan County Farm Bureau office was Edwin LaBaw. He is shown as he dashed in to pay a membership for his grandmother, Mrs. Gary LaBaw. Clerk is Mrs. Florence Jaggi.



Supt. of Schools Virgil Judge (left) and Lyman Bunting.

A SOUTHERN county was first in Illinois to vote on a school survey. The date—Aug. 9, 1945; the county—Edwards; the vote —strongly favorable. Now, nearly three years later, what has happened?

Has anything of value been accomplished? Are the citizens of Edwards county satisfied with progress on their school program thus far? What will be the outcome of this move to unify the 12-grades in the county under one school board?

As things stand today a great deal has been accomplished, thanks to the unselfish devotion of the men who served on the school survey committee and the encouragement of the county superintendent of schools, Virgil Judge.

A great deal, of course, remains to be done, but Edwards county does have a 12-grade district except for 18 sections at Grayville. It also includes 20 sections in adjoining Wayne county. The first board of directors for the new unit district was elected April 24. The seven-man board replaces about 150 men who served on school boards throughout the county. Although Albion has one-fifth of the county's population, it has no representative on the new school board.

The changeover to the 12-grade unit district hasn't been easy. Edwards county has had about the average Illinois county's share of troubles.

That includes dealing with people imbued with fierce local pride, others reluctant to give up their small costly high schools, and some opposed to change of any kind.

Edwards county, however, was blessed with some unusually good leadership. Leadership which steered the county past obstacles that wrecked the best laid plans of other counties.

Reading part of the foreword to the survey committee's report you get a glimpse at the thinking of these men:

"Children are Edwards County's greatest asset. The general welfare of all depends upon how well they are prepared in our public schools to meet society's demand for them. With our social and economic life becoming more complex, it becomes more important that our children, our grandchildren and our great grandchildren be better prepared in our schools to meet these ever-changing and complicated conditions.

"Education in Illinois stands today at the threshold of a great opportunity. Future generations will judge whether or not we, who are now on the scene of action, have exhibited vision, courage, ability and energy . . . ."

The State School Commision considered the Edwards school report "one of the most unprejudiced in the state."

Edwards county is a rural community of slightly less than 10,000. It lies in southeastern Illinois near the Wabash river. Its economy is dependent chiefly on agriculture. Urban areas include Albion, the county seat with a population of 2,000, and some scattered villages.

Educators say that to operate efficiently an administrative school district must have 1200 to 1600 pupils as a minimum.

If this is so then Edwards county, with 1472 in both grade and high schools has sufficient students to operate efficiently and economically as a 12-grade district.

One of the most outspoken champions of school reorganization is Lyman Bunting, charter member of the Edwards County Farm Bureau, chairman of the Edwards County School Survey Committee, and a member of the Illinois Agricultural Association board of directors since 1940.

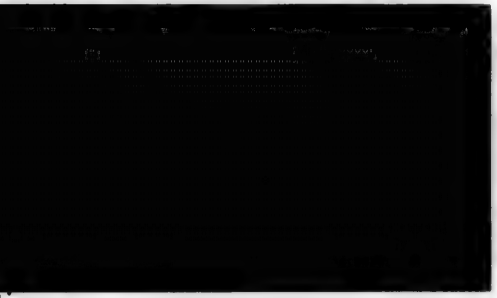
As a farmer, Bunting was concerned with the rapidly deteriorating state of rural education. Assessed valuations

for taxing purposes plus state aid were not sufficient to meet costs which have risen rapidly since 1939. Per capita costs rose steeply as rural school populations dwindled.

RURAL SCHOOL CHILDREN ENROLLED, EDWARDS COUNTY

1891	1875	1940	445
1930	826	1947	395
1951 (estimated	375)		

Like Bunting and Supt. Judge, many others in the community saw the approaching crisis and knew that something had to be done. The school survey committee followed and the 12-grade county unit school district is the result.



Does the county unit district solve everything? Far from it. Supt. Judge said the elementary school situation is still in a critical state and the new county school board elected April 24 is "inheriting a bankrupt situation." He added, however, that if the people will cooperate with the board to streamline the county school system "I am sure we can have far better schools and not need to vote any extra taxes."

After two years of study of the Edwards county school situation, the county survey committee recommended that the county be made into one school district with the exception of the area served by the Grayville high school. The suggestion was voted down Dec. 20, 1947 — 702 for; 818 against. Albion favored the idea but West Salem, Bone Gap, and Browns were opposed.

Albion thereupon voted on a unit district of its own March 20, 1948. Four days later a petition was circulated in the northern part of the county asking for a second vote on the county unit proposal including the Albion district. After some thought, many had changed their minds because the proposal carried April 3 by a substantial majority. Local pride gave way to consideration for the welfare of their children.

Bunting, who lives near Ellery, said there is no intention on the part of anyone connected with school reorganization to gain any advantage for his community over another. The welfare of all the children in Edwards county must come first, Bunting said.

Bone Gap has a fine little school building. But lack of pupils makes operation of the school highly uneconomical and inefficient. West Salem has a poor plant. Albion's building is adequate and Browns is fair.

Curricula of all, however, are inadequate, and the overall operation is wasteful and costly.

EDWARDS COUNTY HIGH SCHOOLS

	Subjects	Enrollment	Per Cap Cost
Browns	21	28	$400
Bone Gap	18	35	380
West Salem	20½	123	250
Albion	31	225	200

The four county high schools listed above spent as much on 414 students as all of the grade schools in the county spent on 1100 pupils.

Rural pupils are expected to be the great benefactors from school reorganization. By combining many districts, the grade school pupil will have greater advantages—more and better books, better qualified teachers, more school mates for organized play. More classmates offer more competition and competition spurs many children to greater effort.

The school survey committee recommended for the county unit district — one senior high school (grades 10 to 12) to be located near the county's geographical center, junior high schools (grades 7, 8, 9) in the four towns; rural schools in neighborhoods where as many as 18-20 pupils can be brought together in the first six grades or where distances are too great for transport to other centers.

OPERATING COSTS, EDWARDS COUNTY SCHOOLS

1920	$69,383	1940	$119,170
1935	85,675	1947	193,509
1948 (estimated)	$220,000		

Many parents want their schools to provide a wider field of study adapted to the times. Consolidation will no doubt result in the addition of such courses as home economics, vocational agriculture, and more machine shop work, public speaking, salesmanship, and art.

Some believe, and school leaders are among them, that Edwards county eventually could support a junior college.

It is now the job of the recently elected school board to put the plan into effect or reject these recommendations as they see fit.

But in the minds of many Edwards county citizens an ideal school setup is taking shape. They will be satisfied to take less than their dreams for the present but tomorrow is another thing. Tomorrow they want the best schools in the state for their children. The course of the school board must point that way.

Members of the school survey committee were: H. V. Stevens, L. W. Nelson, Carl Hayes, Henry Simms, Harold Shepherd, Dennis Hortin, Clyde Crackel, and O. R. Evans.

Members of the new school board are: Pernie L. Mark, Harold Schwarzlose, A. M. Walton, Ramer Schrader, A. B. Gill, Frank Saxe, and Dale Moore.

Typical of some of the finer small high schools is the building at Albion. This is the largest high school in Edwards county.

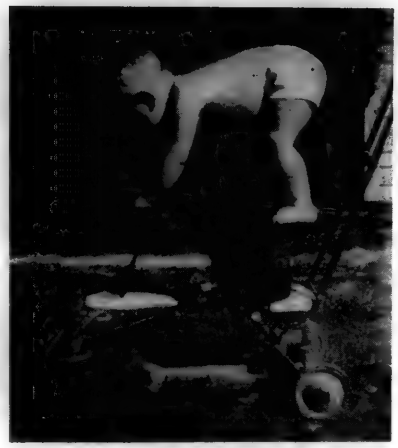
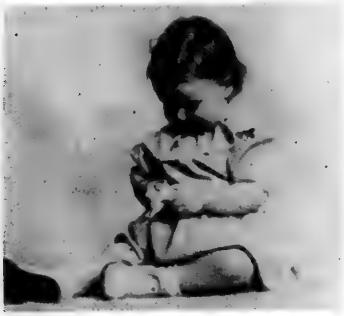
Sixteen-year-old Lee Willeford, Bond county, shows what his spotted stallion Billy can do, just one of the tricks he has taught Billy.

PICTURE OF THE MONTH



When Benny Lee Green, son of Mr. and Mrs. R. L. Green, Richland county, was only eight months old his daredevilry made him appear a likely candidate for a circus. Here he goes into his act. This unusual shot wins the $5 Picture-of-the-Month award.

EDITOR'S NOTE: Picture page entries should be addressed to Picture Editor, Illinois Agricultural Association, 43 East Ohio, Chicago 11, Ill. If you wish picture returned, enclose self-addressed stamped envelope. Entries are judged on originality, clearness, and interest. Avoid shots of persons merely looking toward camera. Best picture receives $5. Others published receive $1.



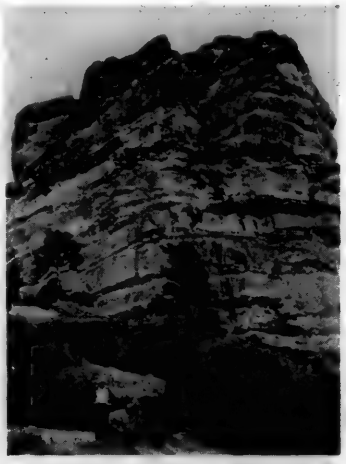
While waiting to take Carol Lynne Kuech's picture at her Cook county home the cameraman snapped this natural shot before she posed for a more formal one.

Karen Schweickhardt, daughter of the Raymond Schweickhardts of Monroe county, likes what she sees in the mirror judging by her expression.

The Owen Hargis children, Randolph county, feed five orphan pigs by bottle. The mother died at their birth. At 6½ months the largest weighed 240 pounds.

Playing with the water faucet is a normal stage in the child's growth. Here Arnold William Burgener tries it. The "William" is for two Farm Bureau grandfathers — William A. Burgener, Richland, and William H. Goodall, Vermilion.

Farm Bureau Folks In Pictures



Albert Starman, well-known Adams county farmer, gets his picture taken near a sample in Red Rock Park, Colorado.

JUNE IS DAIRY MONTH

Illinois dairy leaders map program to promote milk and dairy products during June. Back row, l. to r.: Jerry Cash, U. of I.; W. H. Brazelton, Ill. Ice Cream Ass'n.; A. M. Burton and C. V. Holmes, Ill. Dairy Prod. Ass'n.; Enos Huffer, Ill. Dep't. of Health; C. M. Craft, Sanitary Milk Producers; M. G. Van Buskirk, Ill. Dairy Prod. Ass'n.; A. H. Hobart, Ill. Milk Dealers Ass'n.; Fred Nonnamaker and John Duzansky, Ass'd Milk Dealers; W. J. Swayer, Pure Milk Ass'n. Front, l. to r.: Lowell Oranger, Div. of Foods and Dairies; Paul Tracy, U. of I.; A. P. Benson, Ill. Dir. of Agr.; Edward Reilley, Ill. Milk Sanitarians; Jud Mason, Ill. Milk Prod. Ass'n.; C. F. Deysenroth, Milk Foundation, and James Caterina, Ill. Cheese Mfg. Ass'n.

JUNE is dairy month. It is the time when dairy producers let the world know how important dairy products are to a healthy diet.

Under the banner of the American Dairy Association dairy farmers throughout the country have united in an aggressive nation-wide campaign to make the consumer milk, butter, ice cream, and cheese conscious.

To finance the year-long advertising and promotion campaign of the ADA, one cent for each pound of butterfat is deducted from milk and cream checks during the month of June.

In Illinois a dairy queen will be selected from delegates in 60 communities. The queen will be awarded $250 in prizes and will reign over the dairy building at the state fair in August. Gov. Dwight Green has also signed a special proclamation designating June as dairy month.

Other plans include the distribution of colorful posters, and special displays for grocers, fountains, and restaurants. Illinois is one of the leading dairy states and more than one million cows are milked on Illinois farms.

The ADA advertising program is spread over 12 months with sales creating advertising and merchandising activities in national magazines, newspapers, on billboards and radio. and in retail food stores.

For every dollar invested by dairy farmers through the ADA related food advertisers and retailers spend $12 in cooperative advertising at no cost to farmers.

No farmer could advertise his own products effectively alone but when millions band together the job can be done at a relatively small cost to each farmer.

Get Extra Power with Less Gas!

The NEW EDISON Spark Plug is here!

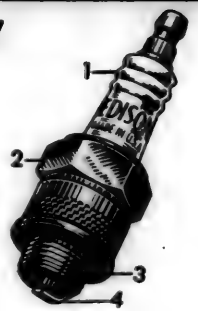
The new EDISON spark plug is here with its new insulator, fitted steel shell, leakproof gasket and high alloy electrodes.

1. The new insulator is made of a new heat-dispersing material, Aluminum Oxide, which possess great mechanical strength. It is also resistant to lead compounds in fuel. It provides a greater heat range than old style insulators

2. The steel body is heat-sealed under high voltage. This thermo-electric seal moulds the steel to the insulator so that they are like one piece.

3. The "Spun-on", leakproof gasket is an exclusive Edison feature. It is made of copper and permanently attached to the plug. It forms a leakproof connection at the engine block, being accurately seated.

4. The electrodes, the business end of the plug, are made from a special alloy (pure nickel and manganese) to withstand high temperatures of modern motors. They have been designed with a wide, flat-ground firing surface. The New Edison spark plug is the "last word" in spark plug efficiency.



Give your motor a Spring Tonic!

LAX-O-GAS

Peps up your engine

LAX-O-GAS is the new compound which produces such beneficial effects when a little is added to the fuel. Six ounces of LAX-O-GAS added to each 10 gallons of fuel will greatly improve the performance of your motor. LAX-O-GAS is composed of gum solvents, highly heat resistant lubricating oils and corrosion inhibitors. When added to motor fuel, it blends perfectly, dispersing evenly through the fuel, so that each drop of fuel has its own share of cleanser.

LAX-O-GAS has these beneficial effects: Dissolves gum formations in combustion chamber, valves and piston rings; improves top cylinder lubrication; resists corrosion; improves compression through better valve seating and freer ring action; conserves fuel and oil; insures a smoother running engine with longer life.

WHEN OPERATING YOUR TRACTOR

FRIENDS, draw up a chair beside my desk here for a few minutes. You won't like what you are going to see, but it could mean life or death to one of your family — or to you. See these scraps of paper arranged in several stacks on my desk? They are newspaper clippings gathered from papers all over the state since Jan. 1.

Just scraps of paper now, but each of those pieces of paper carries the story of a death or serious injury on some Illinois farm. Some of them tell about your friends or neighbors, other about close relatives. And the ones we get next month may tell about you.

We won't take time to look through all of them now, but let's glance through just a few of those on the largest stack. Those tell about tractor accidents. Thumbing through those papers you'll find that most tractor casualties happen to adults, but the most tragic and shocking are those involving little children. Here's one dated April 21 in Milbrook. It tells about a young farm mother and her efforts to surprise her husband who was away helping some neighbors.

Have you seen enough? We haven't even looked at the refueling casualties — such as those about gasoline spilled on hot manifolds. This story shows the folly of refueling inside a building. Spilled gasoline ignited and destroyed not only the tractor but a new car, new corn picker, and the shed as well.

Nor have we seen any of the stories about all those tractors and farm trailers involved in accidents on the highways of our state. But perhaps you are beginning to see the picture as we see it here. Those stories — stories about real people — keep coming in month-in and month-out until the stack is about 300 clippings high as it was last year. Every month, as sure as the world, we know more are coming. And we wonder, "Who will it be this month?"

Here's a story about a Henry farmer who died in a fall beneath his plow. And there is the same story about an Adair farmer. With that same group of clippings you will find the usual number of farmers who were crushed under tractors and who waited for minutes or hours for someone to happen along to drag them out. That's what happened to this Freeport farmer. A passing motorist summoned help, but the farmer is still in serious condition. Look at this Monticello clipping dated April 29. Death by drowning came to that young tractor operator when he upset the tractor in a drainage ditch. The same story from another paper says his body was crushed. However death may come, it still reflects the old, old result of driving too close to ditches.

A New Lenox farmer fractured his skull, an Orland Park man broke a foot, and a La Grange tractor operator hurt his back—all in falls from tractors.

Dig down a little deeper in those papers. You'll see several sad stories about unguarded power take-offs. Right there's one about a Patoka farmer who lost his left leg — and his life — when caught in the power take-off while spraying fruit trees.

Here's a clipping from Kankakee labeled "unusual". It's about a farmer hurt while cranking a tractor. Unusual? Just keep on looking for a moment and you'll see several others very similar. One is from Palestine, another from Reynolds, and there are still more.

She could mind her youngest son, age 4, while her four older children were at school and get some of the plowing done, too. But the surprise ended in tragedy when both the mother and child were found pinned under the heavy tractor which had refused to mount a steep slope after crossing a small stream. Friends and neighbors with 30 tractors and equipment finished the job of plowing several days later. But the mother and child are dead.

The next clipping tells how a three-year-old boy from near Chatsworth suffered bruises and a broken collar bone in a fall from a tractor. His grandfather, the driver, also fell and was injured attempting to catch the child.

The next piece shows how a five-year-old Manhattan girl was severely cut when she fell from a moving tractor under the blades of a disc. Riding on the rear of the tractor proved to be a dangerous thing for this little tot. Fortunately, the disc hit a high spot just as it passed over her and prevented even more serious injuries.

Are Your Pigs in Clover?

Pigs in clover need a feed which does not duplicate the nutrients obtainable from legume pastures. Blue Seal 42% Pasture Supplement was designed just to fill that need. It contains all the vital ingredients not found in pasture. When combined with farm grains and good pasture, Blue Seal 42% Pasture Supplement forms the ideal feeding program. This will give your pigs faster and more economical gains than they would make on corn and pasture alone. It is still urgent to follow a feeding program which will save grain.

For Pigs on DRY LOT

Where legume pastures are not available, excellent results can be obtained by feeding Blue Seal 40% Hog Supplement with home grains in dry lot. In addition to high quality animal and plant proteins, it contains alfalfa meal and all of the vitamins and minerals contained in good alfalfa pasture. Fed with home grains, it makes an ideal ration.

Blue Seal Hog Supplement is the answer to dry lot swine feeding.

Blue Seal Pasture Supplement is the answer to successfully feeding hogs on pasture.

Your Blue Seal Feed Salesman will deliver these feeds directly to your farm.

See these scraps of paper arranged in several stacks on my desk? They are newspaper clippings gathered from papers all over the state since Jan. 1.

Just scraps of paper now, but each of those pieces of paper carries the story of a death or serious injury on some Illinois farm. Some of them tell about your friends or neighbors, other about close relatives. And the ones we get next month may tell about you.

We won't take time to look through all of them now, but let's glance through just a few of those on the largest stack. Those tell about tractor accidents. Thumbing through those papers you'll find that most tractor casualties happen to adults, but the most tragic and shocking are those involving little children. Here's one dated April 21 in Milbrook. It tells about a young farm mother and her efforts to surprise her husband who was away helping some neighbors.

Have you seen enough? We haven't even looked at the refueling casualties such as those about gasoline spilled on hot manifolds. This story shows the folly of refueling inside a building. Spilled gasoline ignited and destroyed not only the tractor but a new car, new corn picker, and the shed as well.

Nor have we seen any of the stories about all those tractors and farm trailers involved in accidents on the highways of our state. But perhaps you are beginning to see the picture as we see it here. Those stories — stories about real people — keep coming in month-in and month-out until the stack is about 300 clippings high as it was last year. Every month, as sure as the world, we know more are coming. And we wonder, "Who will it be this month?"

Here's a story about a Henry farmer who died in a fall beneath his plow. And there is the same story about an Adair farmer. With that same group of clippings you will find the usual number of farmers who were crushed under tractors and who waited for minutes or hours for someone to happen along to drag them out. That's what happened to this Freeport farmer. A passing motorist summoned help, but the farmer is still in serious condition. Look at this Monticello clipping dated April 29. Death by drowning came to that young tractor operator when he upset the tractor in a drainage ditch. The same story from another paper says his body was crushed. However death may come, it still reflects the old, old result of driving too close to ditches.

A New Lenox farmer fractured his skull, an Orland Park man broke a foot, and a La Grange tractor operator hurt his back—all in falls from tractors.

Dig down a little deeper in those papers. You'll see several sad stories about unguarded power take-offs. Right there's one about a Patoka farmer who lost his left leg — and his life — when caught in the power take-off while spraying fruit trees.

Here's a clipping from Kankakee labeled "unusual". It's about a farmer hurt while cranking a tractor. Unusual? Just keep on looking for a moment and you'll see several others very similar. One is from Palestine, another from Reynolds, and there are still more.

She could mind her youngest son, age 4, while her four older children were at school and get some of the plowing done, too. But the surprise ended in tragedy when both the mother and child were found pinned under the heavy tractor which had refused to mount a steep slope after crossing a small stream. Friends and neighbors with 30 tractors and equipment finished the job of plowing several days later. But the mother and child are dead.

The next clipping tells how a three-year-old boy from near Chatsworth suffered bruises and a broken collar bone in a fall from a tractor. His grandfather, the driver, also fell and was injured attempting to catch the child.

The next piece shows how a five-year-old Manhattan girl was severely cut when she fell from a moving tractor under the blades of a disc. Riding on the rear of the tractor proved to be a dangerous thing for this little tot. Fortunately, the disc hit a high spot just as it passed over her and prevented even more serious injuries.

Are Your Pigs in Clover?

Pigs in clover need a feed which does not duplicate the nutrients obtainable from legume pastures. Blue Seal 42% Pasture Supplement was designed just to fill that need. It contains all the vital ingredients not found in pasture. When combined with farm grains and good pasture, Blue Seal 42% Pasture Supplement forms the ideal feeding program. This will give your pigs faster and more economical gains than they would make on corn and pasture alone. It is still urgent to follow a feeding program which will save grain.

For Pigs on DRY LOT

Where legume pastures are not available, excellent results can be obtained by feeding Blue Seal 40% Hog Supplement with home grains in dry lot. In addition to high quality animal and plant proteins, it contains alfalfa meal and all of the vitamins and minerals contained in good alfalfa pasture. Fed with home grains, it makes an ideal ration.

Blue Seal Hog Supplement is the answer to dry lot swine feeding.

Blue Seal Pasture Supplement is the answer to successfully feeding hogs on pasture.

Your Blue Seal Feed Salesman will deliver these feeds directly to your farm.

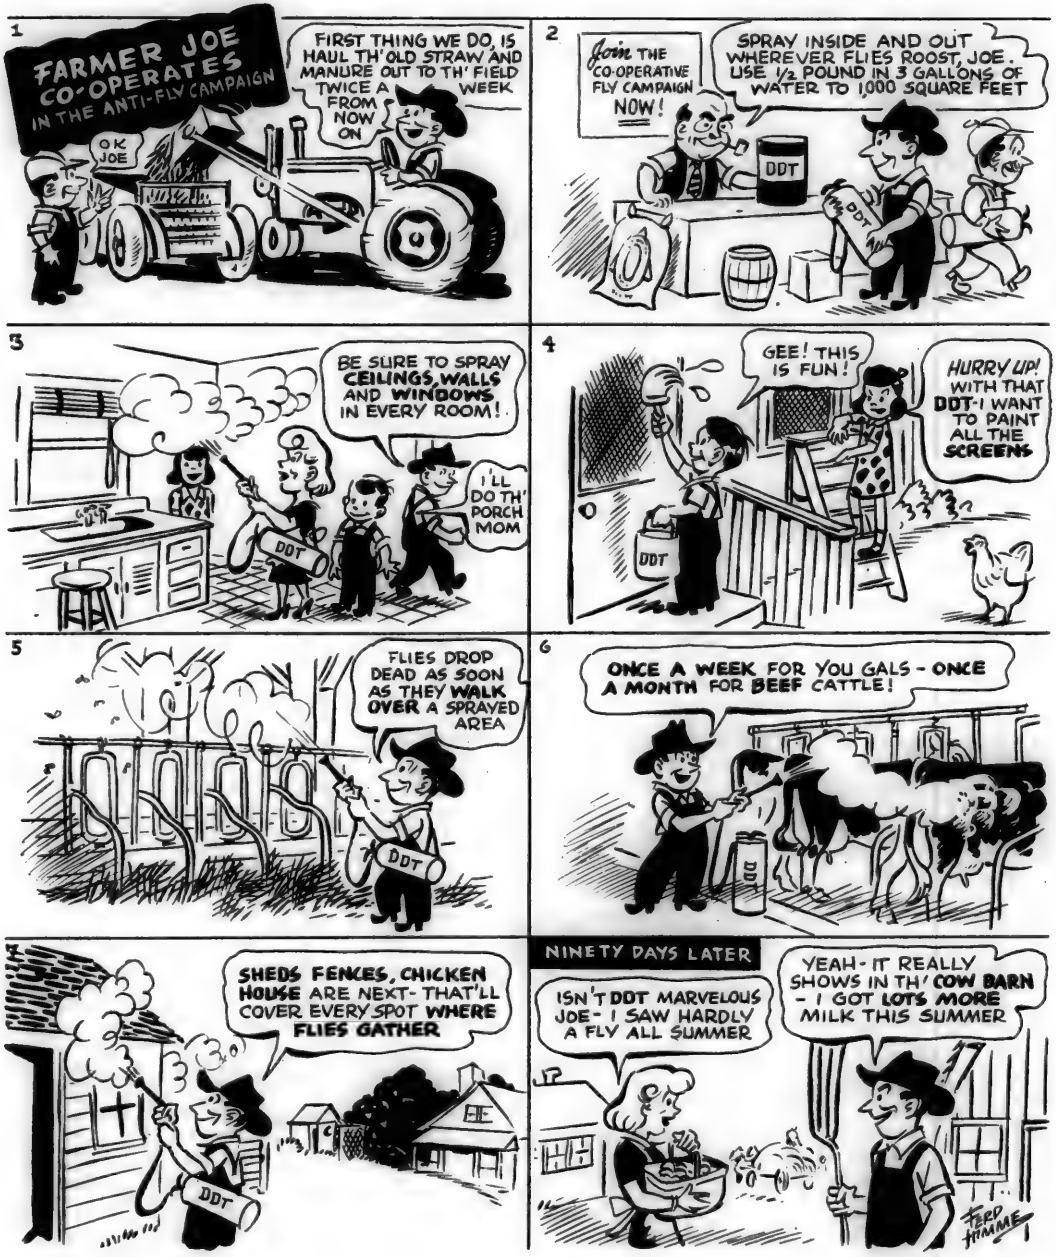
ILLINOIS FARM SUPPLY COMPANY

608 SOUTH DEARBORN ST. CHICAGO, ILLINOIS



YOU can join with Farmer Joe, as thousands of Illinois farmers are doing, to help make Illinois a fly-free state this summer. You can make your part of the campaign a real success by ridding your own farm of flies. This can be done by cleaning up manure piles and other places where flies lay eggs; and then follow up by spraying buildings and livestock with DDT. DDT is a cheap fly killer.

This campaign means greater health, comfort, and profit to farmers. Help make it a success. Join the Illinois Agricultural Association, the Illinois Natural History Survey, the University of Illinois College of Agriculture, and the State Department of Public Health in their drive to rid the state of flies. Help rid your community of flies by destroying the disease-carrying insects on your own farm.

ANIMAL DISEASES ARE SPREAD BY FLIES

By DR. DON VAN HOUWELING, DIRECTOR IAA VETERINARY MEDICAL RELATIONS DEPARTMENT

MASTITIS drops off rapidly right after the first killing frost, a veterinarian with 30 years experience in Illinois, said to me the other day. "This would appear contrary to the old belief that mastitis is much more common in winter.

"You probably have noticed that a drop of milk is always left on the end of the cow's teat after milking," he continued. Flies soon settle on this milk.

"Now if the milk from the cow has mastitis organisms in it, you can easily see what the flies do as they follow the milker down the line. They carry millions of bacteria from cow to cow."

I hadn't thought too much about that angle of mastitis spread until he called it to my attention. After discussing it with other veterinarians and dairymen, I decided his explanation made good sense. Later, I learned about an experiment designed to prove whether or not bacteria could get into the cow's udder through the teat openings. The evidence, I believe, was very conclusive. Let's see if you agree.

A mechanical milker was placed on a cow. When a good flow of milk came from the cow a dye was injected into the milk tube. After the cow was milked, she was killed and the udder was carefully dissected and examined. The dye was well up into the quarter. The dye had gone "against the stream" so to speak and up into the gland. If dye does it, bacteria will too!

Most mastitis is caused by bacteria called streptococci. The particular group of streptococci which most often causes mastitis is probably not dangerous to humans. One streptococcus is primarily associated with septic or "strep" sore throat in humans. This particular germ can cause mastitis in cows, but it doesn't often cause what we would consider a serious case. It is a source of danger to humans drinking raw (unpasteurized) milk from these cows.

There are two ways to prevent this spread. One is to remove the milk from the teat by wiping and disinfecting. The other way is to get rid of flies! I have more faith in the latter method. It is so easy to let the "little things" go when you're in a hurry at milking time.

This is only one of the diseases of animals that may be spread by flies. This is only one way which flies spread disease. Another common way for them to carry infected blood from one animal to another. Take anaplasmosis for example.

You probably haven't heard much about anaplasmosis unless you have been one of the relatively few unfortunate ones in Illinois who have had this disease on your farm. In this part of the U. S., it is not a common disease; but there are some parts where it is very prevalent. Most of our feeder cattle come from these areas. It causes a breakdown of the red blood cells of the animal infected and most of them die. One county in Illinois had an extensive outbreak last summer. This organism that destroys the red blood cells is carried from one animal to another by flies and other blood sucking insects.

It has been demonstrated that one of the most effective ways to check the spread of this diseasase is to eliminate flies. Isolation of infected animals and the elimination of flies is about the only means known to control anaplasmosis. After a killing frost, this disease ceases to spread although animals that are infected and have recovered continue to be carriers of the disease for a long time. They may even remain carriers until the next fly season and again be a source of the infection.

Equine encephalomyelitis (quite a name for horse sleeping sickness, isn't it?) is another animal disease proven to to be transmitted by some flies, ticks, mosquitos, and other biting insects. Although we haven't had a serious epidemic of sleeping sickness in Illinois for several years, scientists tell us it is one of those diseases that run in cycles. According to past experiences, we can expect this disease this summer. Most of you can remember the seriousness of the widespread epidemics of sleeping sickness during the late thirties.

IAA Is Host To Adjusters from 3 States

IAA Vice-President F. E. Morris, Sangamon county, greets hail adjusters from Farm Bureau associated companies of four states at a May meeting in Peoria.

THE Farm Bureau service program in Illinois was outlined by George E. Metzger, field secretary of the Illinois Agricultural Association, to hail adjusters from Farm Bureau associated insurance companies of four states meeting in early May at Peoria. Metzger was introduced by F. F. Morris, Sangamon county, IAA vice-president.

Country Mutual Fire Company, associated company of the Illinois Agricultural Association, was host to the adjusters from Indiana, Iowa and Wisconsin.

Metzger, who is also secretary of the division of organization and information for the IAA, pointed out to the visitors that today the Farm Bureau in Illinois can go to a farmer and offer him a complete insurance service.

Ability to offer such a service, he pointed out, was the result of the planning and work of Illinois Farm Bureau leaders who had a vision and an overwhelming desire to serve farmers.

Metzger also reviewed other services offered farmers through the Farm Bureau in marketing, purchasing, legislation, education, etc., and reported that the total assets of the Farm Bureau and associated companies now amounted to an estimated 77 million dollars.

The hail adjusters attending the Peoria meeting will either adjust or supervise the adjustment of all the hail losses in the state of Illinois in 1948 for the Country Mutual Fire Company.

Last year this group of adjusters handled more than 2200 losses totalling approximately $600,000. Prospects for 1948 indicate that the Country Mutual Fire Company will write in excess of the 148 million dollars of coverage written in 1947.

Vern Holland, assistant manager of Country Mutual Fire Company, chairman of the meeting, emphasized that a successful insurance company must be adequately financed.

Discussing some of the experiences in hail adjusting, Holland said he would rather have a man for an adjuster with 90 per cent Farm Bureau background and 10 per cent insurance experience than one with 90 per cent insurance background. He also said that there seemed to be no way of charting the trend of hail storms over a number of years.

Other speakers on the program from Country Fire Company were Donald Teare and Charles Masching who discussed hail adjusting procedure.

Richard O'Dell, general agent in Platt county, and C. L. Platt, secretary of the Platt Service Company, came in a little late for the group picture, but IAA RECORD photographer thought they were too important to be left out, so he made a separate shot.

Illinois Farm Bureau insurance adjusters attending Peoria meeting pose for picture. Front row, l. to r.: F. L. Borton, Monticello; J. F. Meyers, Blue Island; Elbert Urfer, Chicago; Glenn Zook, Farmington; George Metzger, IAA, Chicago; E. E. Sandell, Yorkville; J. G. Mesher, Princeton. Back row: Jacob Ouwenga, Blue Island; Don Teare, Chicago; C. W. Harvey, Paw Paw; Vern Holland, Chicago; Garth Hinkley, DuQuoin; C. C. Masching, Chicago; George Dirreen, Havana.

Frank Atchley is Named New IAA Research Director

FRANK M. ATCHLEY, 37, has been employed as director of the Illinois Agricultural Association department of research. He will take over his duties July 1.

F. M. Atchley

Atchley has been working in the farm management department at Michigan State College since 1938. He succeeds L. H. Simerl, who resigned Sept. 15, 1947 to join the extension service at the University of Illinois.

Born and reared in Iowa, Atchley graduated from Iowa State College at Ames in 1933 and worked a year for a life insurance company in Des Moines.

He returned to Iowa State College in 1934 to continue his graduate work. In 1935 he took a job as a research assistant at the University of Illinois College of Agriculture where he received his master of science degree in 1937.

Atchley joined the army in 1942 and was discharged with the rank of major. Since his return from the army most of his work has been in farm management and soil conservation on the rougher lands of southern Michigan.

As IAA director of research Atchley will work with all divisions of the association and its affiliated cooperatives in furnishing research facts. He will also develop reports for information of farmers in general.

Atchley is married and has a 7-year-old daughter.

HERE'S SPILLED MILK *Really* WORTH CRYING OVER!

Photo — Courtesy of National Safety Council, Inc.

There's more involved here than spilled milk! This same cow that kicked over the milk struck down the hired man. Possible results: A brain concussion (and a probable costly damage suit *if his employer doesn't carry liability insurance*).

Last year 326,000 farm people suffered disabling injuries. Figure your own chances of immunity with your employees. You just can't afford to pay liability costs for injuries sustained by your help at their jobs, or injuries sustained by strangers on your property.

Country Mutual Casualty Insurance can protect your income against costly mishaps with both general and employers liability coverage.

COUNTRY MUTUAL CASUALTY COMPANY

Our insurance representative at your Farm Bureau office will explain why liability coverage is essential for you as a farmer.

A BASIC FARM HOUSE PLAN

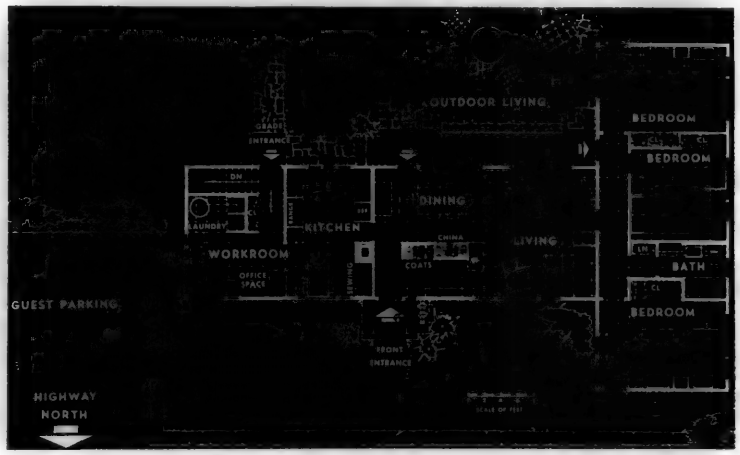
HERE IS a house designed for the farm, built to fit the living and working habits of the farm family. The basic plan takes advantage of the farm's generous home site. Its general design provides for spacious outdoor living.

The house is simple to construct. Much of the rough carpenter work can be done by any man handy with tools. The plans are flexible and can be expanded to fit the needs of a growing farm family.

This can be the home of your dreams. The house is architecturally sound. It is the result of months of study and the pooling of ideas by engineers, architects, home economists, and landscape architects at your own state university.

The house consists of two rectangles. One contains the living room, dining room, kitchen, workroom, and allied storage spaces. The other rectangle contains the bedrooms and bathroom. These two units can be put together as desired. Three ways are suggested on these pages: 1) when the farmhouse faces north (the large picture and plan) 2) when the farmhouse faces east, and 3) when the farmhouse faces west.

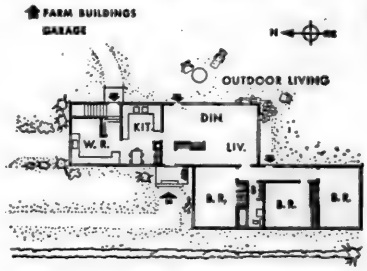
The house has many advantages made possible by careful engineering and architectural planning. The housewife working in the kitchen has a view of the highway, the approach from the highway, and of the farmyard itself. The living and dining room, combined into one large area, open onto a terrace which provides an outdoor living area with southern exposure. Visitors will be attracted to the front door since it can be reached easily from the driveway. The bedroom unit,

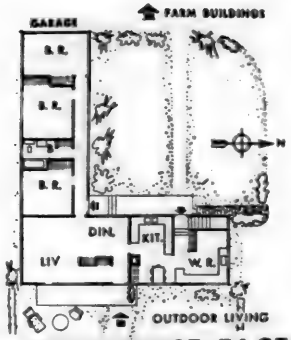


Material and illustrations for this article are based on Small Homes Council Circular C7.2. This circular is one of a series on small homes prepared by the Small Homes Council. Circular C7.2 may be purchased for 10c or the entire set of 19 circulars for $1.50 by writing to Small Homes Council, Taft Drive, Mumford House, University of Illinois, Urbana, Ill.

The plans for this basic farmhouse were designed by the agricultural engineering department of the University of Illinois College of Agriculture and the Small Homes Council, under a *Farm Journal* research grant.

FARMHOUSE FACES HIGHWAY ON WEST





FARMHOUSE FACES HIGHWAY ON EAST

simple in design, provides for each room to be separated from the other by closet space, permits a variable number of bedrooms, and can be reached from the outside.

The Exterior

The house exterior looks nice from any direction and makes the most of a spacious setting. It should look equally well constructed of stone, brick, wood siding, shingles, plywood, or asbestos sheets. The windows are large, in keeping with the trend among homeowners for sunshine and spacious views. The roof projects to form a large overhang which is attractive and practical.

This house is based on the much discussed principle of modular planning. The floor plan shown here is a checkerboard of squares. These squares are based on a standard modular unit of four inches, or multiples of four inches, instead of fractional and odd dimensions.

It can be built with a minimum of cutting and waste when materials are also of modular sizes. The floor joist is 16 feet wide, for example. Windows also coincide with modular lines. Manufacturers are now making modular-sized windows.

Construction

This farmhouse achieves simplicity because the rectangles of the farmhouse are only one room wide (16 feet) and require only one span of 2 x 10 floor joints. The house needs no center beams or other supports in the basement since interior partitions do not carry a load. The roof is built of light-weight rafters.

The cost of the house will vary with locality and for a variety of reasons. However, E. V. Stadel, farm adviser for Jo Daviess county has asked contractors for estimates.

Two contractors submitted bids averaging from $7,000 to $8,000 for the house complete with plumbing, heating, and wiring. Stadel says he feels that anyone who is handy at all at carpentering could do much of the rough work on a house of this type himself.

He says that he has had a lot of folks in to talk about building a new house of this type but they seem to shy away from a one story house.

"We seem to have the idea that a farm house must be a big, square house," he says, "when a one story house should be much more efficient for a homemaker as well as cheaper to build."

Work Area

One of the particular advantages in this house is the well-engineered homemaking area. The workroom contains a handy wash-up space, an office with desk and files, a laundry alcove, work space for processing food and preparing produce for market, and storage cabinets for work clothes.

The kitchen provides a U-shaped area for refrigerator, sink, range, cabincts and efficient work counters. The kitchen also provides a breakfast nook. It can also double as a sewing room.

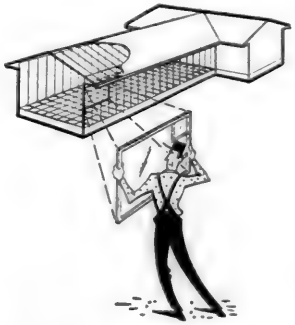
Shower and toilet can be put in the workroom also in case it is impossible, because of drainage, to put them in the basement.

The one-story house with a partial basement was selected because of today's preference for one story houses. In addition, most farmers want at least a partial basement under their home.

The house was made flexible because of a difference in family size and to make the building inexpensive in case only a one-bedroom house was desired with expansion to come later.

The basement was designed to enable farm workers to clean up before entering the living areas. The basement also can be built to include an all-purpose room which can serve as a clothes-drying room in case of wet weather.

MODULAR PLANNING



The house is designed along modular lines. Studs, room partitions, windows and door openings are placed to fall along 16-inch modular lines. Sketch shows how the windows fit without cutting because they are of modular dimensions.

House must have sufficient elevation so basement plumbing fixtures can drain into septic tank.

BASEMENT PLAN

Break Ground for New

FARM SUPPLY MIXING PLANT

Work Also Started on $500,000 Milling Plant

WORK on the new 80,000 ton capacity Illinois Farm Supply fertilizer plant at Fairmont City started recently when President Fred E. Herndon stepped into the cab of a power shovel and scooped up the first bucket of dirt.

The new plant, one of the most modern superphosphate acidulating and fertilizer-mixing plants in the midwest, is being built on a 12-acre tract at the intersection of U. S. Highway 40 and the Alton and Southern Railroad, east of Fairmont City.

The fertilizer-mixing section of the new plant will have a capacity to mix 40,000 tons annually. The acidulating portion will produce an equal amount of superphosphate.

Rock phosphate will be shipped in either from Florida or western deposits and treated with sulphuric acid to produce superphosphate. About half of this will be sold to farmers. The other half will be used by the fertilizer-mixing section of the plant. Here it will be processed and other plant food elements, as nitrogen and potash, will be added to produce high analysis Blue Seal crop fertilizers.

This new plant will be used to supply member distributors in the southern two-thirds of Illinois. The Hartsdale, Ind., plant will furnish the plant food for the northern third of Illinois.

The Fairmont City plant is the first wholly owned and operated by the Illinois Farm Supply Company. The Hartsdale plant is operated jointly with the Indiana and Wisconsin Farm Bureaus and the Midland Wholesale Cooperative.

Plans are under consideration for increasing Illinois Farm Supply Company ownership in the Hartsdale plant.

New Milling Plant

Construction of a second new plant was started by the Illinois Farm Supply Company last month when ground was broken at Mendota in LaSalle county for a $500,000 milling plant. Workmen are now building the office and general merchandise warehouse.

The plant will blend and mix livestock and poultry feeds.

The plant is being built on a 15-acre site south of Mendota on Highway 51 adjacent to the Chicago, Burlington, and Quincy Railroad. Grain and processed feed can be moved into the plant both by rail and truck.

The general merchandise warehouse will measure 100 feet by 100 feet. The mill house will be four stories high. The storage capacity will be between 50,000 and 60,000 bushels.

Next to the mill building 12 storage tanks 60 feet high will be constructed. Space is being saved for nine others to be built later. In addition, a 15,000 gallon molasses tank will be built.

It is estimated that the plant, which will employ about 25 men, will take from nine months to a year to complete.

Earth moving equipment swings into action as ground is broken for the Illinois Farm Supply Company's new fertilizer plant at Fairmont City near East St. Louis.

AFBF OFFERS $500 IN THRIFT CONTEST

FOR the best statement supporting thrift and sound investments as a way to control inflation the American Farm Bureau Federation will pay a first prize of $300 in savings bonds, a second prize of $150 in bonds, and a third prize of a $50 bond.

Statements should be limited to 500 words and should stress the wisdom of farmers using their money wisely during high prices and protecting their future with sound investments. Your statement might well be based on personal experience in saving through government bonds.

The wining entry will be published in The Nation's Agriculture. Submit contest entries to the Department of Information, American Farm Bureau Federation, 58 E. Washington St., Chicago 2, Ill., not later than July 4, 1948.

JUNE IS DAIRY MONTH

It's Good Business to

PAINT with SOYOIL

It is good business to see that farm buildings are not allowed to deteriorate. Soyoil paint offers excellent protection against the deteriorating effects of weather. Refined soybean oil, made from beans grown in Illinois, is the chief "weather fighter" of Soyoil paint!

It's even better business to protect your investment in buildings with a product made from your own crops, by your own company!

No. 90 Red Barn

No. 90 Soyoil Red Barn Paint is especially designed to give long lasting protection for barns, sheds and corn cribs. Of importance to farmers is the fact that it is mildew resistant and that good results and good coverage can be obtained when used on badly weathered surfaces. No. 90 Red Barn Paint can be successfully used on brick, concrete, metal or wood.

No. 5 Outside White

Soyoil #5 White Paint is the paint which is so popular with Illinois farmers. They like it's "white brilliance" which results from it's excellent hiding power. You will like it's superior lasting qualities which are obtained by carefully mixing white lead, zinc oxide and titanium pigment with highly refined soybean and linseed oils, and grinding to a fine consistency for brushing or spraying.

You'll find it's good business to paint with Soyoil.

ORDER NOW!

If your farm buildings are in need of paint protection, order your Soyoil Paint now while the supply and prices are favorable. Deterioration of farm buildings is costly. Add protection, beauty, and charm to your farm with Soyoil Paint.

No. 90 Soyoil Red Barn Paint is especially designed to give long lasting protection for barns, sheds and corn cribs. Of importance to farmers is the fact that it is mildew resistant and that good results and good coverage can be obtained when used on badly weathered surfaces. No. 90 Red Barn Paint can be successfully used on brick, concrete, metal or wood.

No. 5 Outside White

Soyoil #5 White Paint is the paint which is so popular with Illinois farmers. They like it's "white brilliance" which results from it's excellent hiding power. You will like it's superior lasting qualities which are obtained by carefully mixing white lead, zinc oxide and titanium pigment with highly refined soybean and linseed oils, and grinding to a fine consistency for brushing or spraying.

You'll find it's good business to paint with Soyoil.

ORDER NOW!

If your farm buildings are in need of paint protection, order your Soyoil Paint now while the supply and prices are favorable. Deterioration of farm buildings is costly. Add protection, beauty, and charm to your farm with Soyoil Paint.

Rural Women Tour Chicago As Holiday

Enjoying themselves as luncheon guests of the Continental Bank in Chicago a group of La Salle County Home Bureau women are shown with Paul E. Mathias (left), IAA Secretary, and John Mannion (right), bank official. The women, left to right, front, are: Mesdames E. Nodland, L. A. Beardsley, Glenn Maier, Clarence Frye, and Tom Kenney. Back: Mrs. O. H. Ryan and E. Dimmick.

A TWO-DAY sightseeing and vacation trip to Chicago, including luncheons, guest appearances at radio programs, and tours of art centers, was enjoyed by 108 La Salle County Home Bureau members recently.

The rural women traveled in a caravan of three busses, stopping first at the Merchandise Mart where they heard Don McNeil conduct his morning breakfast club. Mrs. Glenn Ford was interviewed.

They then were shown through the Board of Trade. Later they were escorted by guide through the Continental Illinois National Bank and Trust Company building where they were luncheon guests.

After lunch many went shopping. Their next stop was Chinatown where the group ate dinner and afterwards attended the play, "John Loves Mary."

During the trip the group visited the Art Institute where they had a first hand chance to admire the fine art and skilled workmanship in a display of French tapestries.

Nation Honors Home Bureau Week

WILL County Home Bureau members celebrated National Home Bureau Week May 2-8 by displaying in store windows the projects studied during the year by their members.

The displays consisted of health booklets studied which stressed home pasteurization of milk, home furnishings, accessories for the well-groomed lady, and some phases of clothing construction.

Unit chairman appointed committees in each locality to take care of these displays set up in local store windows.

This is the third year this special week has been celebrated. Home demonstration work or Home Bureau work is carried on in each of the 48 states and in Hawaii, Alaska, and the Philippines.

State and federal workers are assisted by half a million rural women volunteer leaders in the program.

In Illinois Home Bureau work is conducted in 100 of the 102 counties in the state. Membership is near the 50,000 mark.

In Illinois and throughout the nation more than three million rural women celebrated National Home Bureau week. In Wisconsin it was celebrated in conjunction with the state's centennial ceremonies. Homemakers portrayed changes in their homes during the past 100 years.

In New Mexico good neighbor ideas were featured with foreign war brides invited to tell of homes in their native lands.

Wyoming women sponsored a letter-writing contest describing daily life on a western farm or ranch. The best were published locally and were later sent to the Associated Country Women of the World in London to help European women understand farm life in our

The La Salle visitors stop to chat with Eugene W. Sloan, vice president of the Continental Bank. Seated, l. to r., Mrs. Harriett Reed, bank teller; and Miss Helen Elliott, assistant home adviser; standing: Miss Eureath Freyermuth, home adviser, and Mrs. W. J. Wylie, Home Bureau president.

for HOMEMAKERS

FESTIVE SETTING

The busy homemaker can entertain with a minimum of table linen if she has a set of place mats. If you like to crochet, you will be particularly happy to learn that the Nation-Wide Crochet Contest has returned. You many enter crocheted pieces in any of eight classifications. Your entry must first be submitted in a state, county, or local fair. For full contest details, a Nation-Wide Crochet Contest rules sheet is available to you. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago, Ill.

CROCHETED GLOVES

Pretty smart hand coverings, aren't they? You can make them yourself with some white pearl cotton and a crochet hook. The lacet stripes running from tip to stern gives your hands that l-e-n-g look. If you like expensive looking gloves at a minimum cost, make a pair of these white beauties. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago, Ill.

Your company clothes are safe from spots behind this pretty apron. You can make it without a pattern from pastel cotton and bands of polka dot material. If you have enough aprons for yourself, why not make one for a friend's birthday? For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

ranch country.

Recognition was given on "RFD America", a radio show originating in Chicago. An Ohio farm homemaker spoke over the entire NBC network. A tribute was paid to home advisers on "Cavalcade of America". CBS over "Country Journal" featured a Maryland home adviser.

Georgia sent a delegation to Washington, D. C., to learn about the workings of the department of agriculture. San Joaquin county, Cal., planned a tri-county celebration with a special luncheon table for members active for 20 or more years.

Alaska honored the clubs in the Matanuska Valley which was colonized from the states during the days of the depression.

Nearly every state honored the week in a special way and with planned events. It was a nation's tribute to the fine spirit with which home advisers and volunteer leaders are serving unselfishly the farm women of the United States.

Hancock to Build County Hospital

A CAMPAIGN to raise $250,000 locally toward a hospital building fund has been launched in Hancock county. A community and county-wide program, the drive for funds is being supported strongly by the Hancock County Farm Bureau.

Plans provide for the hospital to be built in Carthage at an estimated cost of $600,000. This will give the county a 50-bed general hospital and an intermediate medical center conforming to the Illinois Hospital Survey and Plan.

NOTICE

Patterns on these pages are available for six months only following publication.

The U. S. Public Health Service and the Illinois Department of Public Health have each approved grants of $200,000 toward building and equipping the new memorial hospital.

The Memorial Hospital Association, which is directing the building fund campaign, has been accepted as a member by the American Hospital Association and the Illinois Hospital Association.

Fugard, Burt and Wilkinson of Chicago are the architects for the new hospital.

Kane county recently held a rug making school where 60 women were shown by demonstration how to make hooked, braided, wagon wheel, and new art craft needle rugs.—Mrs. Elmer Flanders.

Need a hired man? Here's the average Illinois farmers are paying this spring. With board, $105 a month; without board, $129. Day wages with board, $5.10; without board, $6.20.

IAA Gives Position on Rural Roads

(*Continued from page* 9)

construction not required by the reasonably anticipated traffic thereon. As a result but a very limited mileage can be constructed with the funds available.

Maximum standards of design for farm-to-market roads should be adjusted to allow for traffic needs in order that the maximum mileage of low-cost, all-weather roads may be constructed. The standards fixed under the $15,000,000 state assistance program seem to be practical and might form the basis for legislation.

5. Research—Materials, Construction

The citizens of Illinois have paid in property and gasoline taxes vast sums of money for road improvement each year. Plans are now being made for further large expenditures of local, state and federal funds for road purposes.

All construction costs have increased greatly and the cost of construction of low-type secondary roads has become almost prohibitive. Outstanding research work has been done in this state upon the construction and design of state roads which carry heavy traffic, but very little research on construction, surfacing materials, design and maintenance of local roads has been done.

The Association requests your commission to urge the University of Illinois and the Division of State Highways to institute an adequate program of research on the problems of materials, design, construction, and maintenance of secondary farm-to-market roads.

The Illinois Agricultural Association will continue to support all reasonable efforts to provide an adequate system of primary, secondary, and farm-to-market roads. We believe Illinois should have a long-range program of highway development consistent with and measured by our needs and the taxpayer's ability and willingness to pay.

We appreciate the seriousness and complexity of the problems facing your commission. In recent years it has become more and more apparent that piecemeal remedies and rivalries between highway agencies and organizations will solve none of the basic problems. These conditions actually are impeding sound development of our road system. We look to your commission for the preparation of a factual statement of Illinois highway needs and sound recommendations for measures to meet these needs.

Animal Diseases Spread By Flies

(*Continued from page* 25)

There is a vaccine available to protect horses against sleeping sickness that is an excellent immunizing agent. But each year, there are less and less horses vaccinated because the memories of the disease when it was so widespread are not so vivid anymore.

The other way to protect horses against encephalomyelitis is to get rid of biting insects. Army experiences demonstrated clearly that mosquitos and flies can be practically eliminated by proper spraying. The protection against the disease afforded the horses is enchanced by the comfort enjoyed by the animals and the convenience experienced by the driver or rider when horses are not continually pestered by flies and insects.

There is another angle to this sleeping sickness prevention which shouldn't be overlooked. Although all pieces of the puzzle have not been fitted together as yet, there is no doubt that humans can get encephalitis or "sleeping sickness" from the viruses causing horse sleeping sickness. So it's bad business to have horses around that have sleeping sickness for the sake of your own health. Again, flies, ticks, and mosquitoes are the culprits involved in the spread of this disease from horses to man.

There are many other animal diseases that may be spread by flies. These hairy legged little insects have been suspected of spreading hog cholera, anthrax, brucellosis and many other common maladies of farm animals. It is almost impossible to determine how often flies are a factor in the spread of animal diseases. Anyone familiar at all with flies and their habits can readily imagine how they could transmit diseases.

The elimination of this method of disease spread is just one more of the many benefits to be derived from eradicating flies! Science has thrust a powerful weapon into your hands — DDT. Its use will protect your health and the health of your stock. Use it NOW!

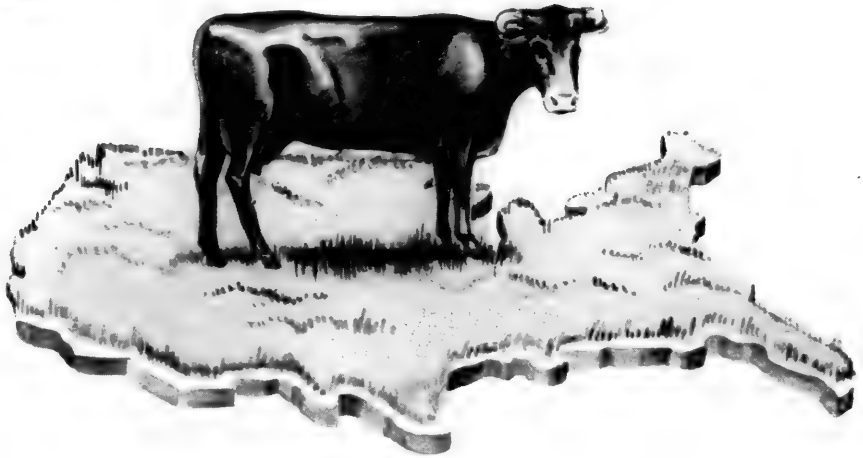
SYMBOL OF



Hungry cattle on hungry land might be a spectre of the future — a danger signal for all Americans. Hungry land means a weak and ill-fed nation. America's acres have produced plentifully. During the war farm production reached an all-time high.

But every farmer knows that in order to preserve the fertility of the soil, land must be given a chance to rest . . . must be fed and fertilized. The drain on the plant food in our soil has been great. It will cost money to put it back . . . and this must be met by favorable prices for farm products. Farmers can afford to give the land the rest and nourishment it needs only if fair farm prices and profits are assured in the coming years.

This is a cause that is worthy of united and positive action by all farmers. It is a cause for which your Farm Bureau is fighting.

Don't "Dampen" His Dreams

What are his dreams today? Policeman . . . airplane pilot . . . doctor? Tomorow those dreams may find a new hero. But no matter . . . whatever the dream, it can be fulfilled with the RIGHT insurance plan behind it. Just a small investment TODAY will guarantee his education in the field of his choice . . . will help him launch a home of his own . . . will get him started in business.

Country Life's plan for your children's future should start when they're young. That way the cash value of the policy grows as they grow. Should anything happen to you, they'll have the opportunities they deserve. If you survive, the cash value of the policy acts as a savings fund available for education at college age.

Get in touch with your Country Life counselor today. Discuss with him the best plan to insure your child's success.

WHY NOT TAKE ONE INSURANCE STEP IN

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

NEW IDEAS AND THE NEW LOOK

By President Charles B. Shuman

A SMALL group of IAA officers stood watching a huge transport truck at the Pana Refinery loading its precious cargo of fuel for farming. It gave me a thrill to look beyond the loading dock to the busy refinery. In a way it seemed to typify the activity and progress of the far-flung cooperative service structure being built by the Farm Bureau members of Illinois.

I wish you could have gone with us on this 2,000 mile inspection of a few of the facilities and operations of your own organizations. You would have seen thousands of cans of milk coming into the Prairie Farm Creameries each day to produce tons of high-quality butter, milk and milk products; hogs by the hundreds moving through your own yards to all parts of the nation; paper milk bottles at Olney; huge piles of graded wool at Paris; great towers of concrete and machinery pouring a golden stream of grain into river barges at Hennepin and Havana; pelleting machines and conveyor belts at the Benton Feed Mill; a hog dehairing machine in the co-op slaughter plant near Carlinville. These we saw, together with hundreds of other examples of progress typical of the farmer cooperative marketing, purchasing and service organizations affiliated with your own organization.

Why have farmers built this huge and varied structure? The price in terms of time and loyalty and hard earned dollars has not been cheap. Illinois farmers have also accepted a great responsibility in the proper guidance and direction of their multi-million dollar cooperative institutions which today employ in excess of 5,000 people. I am sure that they have not followed the co-op route solely to save a few millions of dollars. Everywhere we went we heard the same statement, "We started this organization because we farmers could not obtain the kind or quality of service which we desired at a reasonable cost." That is the answer!

You can be proud of the fact that your cooperatives have been pioneers in introducing the "new look" to business and industry. The old system was based on production to suit the industry with dependence upon high pressure sales programs to induce farmers to purchase. For example, low analysis fertilizer is produced and sold because it suits the convenience and equipment of the manufacturer. Our own cooperative has taken on a new look and asked the farmer what kind of fertilizer he wants. The result has been a higher analysis, more economical product. Again and again we visited successful cooperatives operating on this policy of offering the farmer the service that he wants and needs.

Future progress and further expansion of our cooperatives will depend upon the extent to which farmers' marketing, supply and service needs are properly analyzed and filled. Cooperatives will fail if they blindly follow old methods; they will thrive on new ideas and the "new look" toward service.

MARKETING FR

By L. L. COLVIS,
Secretary Division of Marketing

SEVERAL days ago a grain elevator was finished on the Illinois river at Hennepin. In a few months another will be ready at Lacon. Slowly but surely Illinois farmers are taking a greater share in the marketing of their own grain.

As Illinois Agricultural Association-sponsored elevators and grain-handling facilities multiply along the rivers and inland grain growing centers, farmers find themselves developing a program looking toward the eventual terminal marketing of grain.

When this program is completed, it will be possible for Farm Bureau members to follow their grain all the way from combine to consumer without losing ownership. Terminal facilities are being planned for Chicago and St. Louis.

The IAA Division of Marketing, is working toward similar ends in its other marketing departments. The intention is to keep prices more responsive to supply and demand.

How can this be done? There is perhaps some difference of farm opinion on marketing. You might say there are three schools of thought.

1. Some think farmers should take over the entire job of marketing their products.

2. Some think farmers should carry out only certain phases of marketing. For instance, sell fluid milk to dealers but not to consumers.

3. Others think farmers should market all the way from the feed lot through the butcher shop, but for only a part of the production of each commodity. This is known as the "across the board" method.

Most Illinois farmers appear to favor the third approach. It is believed that by marketing some grain, some milk, some livestock, etc., the farmer, through his Farm Bureau cooperatives, can exert tremendous influence on others in the field. Competitors are kept on their toes looking for better methods of doing business.

But marketing is not a simple operation. It cannot be taken on or sluffed off overnight. It is the entire process of assembling, processing, grading, packing, transporting, stocking, and finally delivering to the consumer. As Illinois farmers have moved into every field of marketing their marketing problem has, of necessity, become more complex. Meanwhile, agriculture and farmers' organizations are looked upon with greater respect.

Just setting up a cooperative is no guarantee of improved marketing. Sound business principles must be applied and day-to-day operations must be carried on with honest effort and efficiency.

County Farm Bureaus and the Illinois Agricultural Association have been organizing and assisting marketing cooperatives for more than 25 years. Most of the Farm Bureau cooperatives have been outstanding successes. They have been organized not just to set up cooperatives but to develop marketing techniques for the benefit of farmers. In doing so, they also have benefitted consumers.

To facilitate the work of these cooperatives, the IAA established the marketing division more than a year ago. While all marketing work is not under this division, it does include these departments and their heads: livestock marketing, Sam F. Russell; grain marketing, George H. Iftner; dairy marketing, Judson P. Mason; and fruit and vegetable marketing, R. S. McBride. Following is a brief account of what is being done in these departments.

Since 1947 there has been increased activity in the operations of the Illinois Livestock Marketing Association, an IAA affiliate. Nine new concentrated buying points have been established in northern and western Illinois.

Livestock Markets

They are located in Henderson, Stephenson, Adams, Hancock, Mercer, Henry, Whiteside, Schuyler, and Scott counties. In addition to the unit at Freeport, Stephenson is operating another at Lena. The unit at Shelbyville operates another at Effingham.

Three more are being organized in Jo Daviess, Bureau and Winnebago counties. Others will be in operation before the end of the year.

The livestock marketing department took an active part in the organization of the producer agencies at St. Louis, Chicago, Peoria, Springfield, Bushnell, and Indianapolis. The first, the St. Louis Producers, was started in 1922 at National Stock Yards, Ill.

The original buying points of the Illinois Livestock Marketing Association are located in Champaign, Vermilion, McLean, Edgar, Macon, and Shelby counties. These units purchase hogs, and assemble other livestock for shipment to a producer agency or a terminal market.

Before new concentration buying points are set up, surveys are made by the department at the request of the county Farm Bureaus. The following questions require favorable answers: 1. Is there sufficient livestock in the area? 2. Are livestock producers interested? 3. Are farmers will-

NG FROM COMBINE TO THE CONSUMER

ing to finance the project? 4.Will farmers support it? 5. Is there need for it? 6. Are transportation facilities favorable? 7. Is the distance from a cooperative outlet reasonable (within 40 miles)?

Besides requiring the cooperation of the farmer patrons to furnish a complete marketing system, it seems essential that operations of country and terminal markets should be carried on under a unified plan. Perhaps under one operational policy. One look at the hog marketing situation today leads one to conclude that a merger of cooperative buying and terminal market selling should be under a unified head with one board of directors setting the policy for the entire state.

A plan such as this is being recognized by leaders in livestock marketing as being essential to future progress. Such a plan must have the support of the livestock producers. Otherwise it is doomed to failure.

The livestock producer is very much in favor of local buying points for hogs. He is supporting them by marketing his livestock through this organization as well as furnishing operating capital. This development has made rapid progress in the past year.

He also is strongly supporting terminal marketing. About 85 per cent of the livestock marketed cooperatively in Illinois is sold on terminal markets by producer agencies. The remaining 15 per cent is sold by the Illinois Livestock Marketing Association.

The department works for the benefit of the livestock producer and is anxious to assist in bringing about a more effective and efficient marketing system.

Grain Marketing

The present program of the grain marketing department involves the ownership of local elevator facilities, river elevators on the Illinois and Mississippi rivers, and terminal facilities at Chicago and St. Louis.

During the past three years the department has promoted the organization and operation of river sub-terminal elevators at Dallas City, Havana, Lacon, Hennepin and Morris. Some of these elevators already are serving farmers within a radius of 30 to 50 miles of the river points.

Grain originating on Illinois farms and marketed through Illinois Grain Corporation, Illinois Grain Terminals Company, the producers statewide marketing company, and Indiana Grain Cooperative will be eligible to receive patronage refunds. These patronage refunds flow back to the local elevators, county and river companies and finally are distributed to the original producers.

The grain marketing department cooperates with the Indiana Grain Cooperative, with terminal elevators at Indianapolis, Louisville, Evansville and Decatur, Ala. The Illinois Grain Corporation is the statewide commission and brokerage grain firm affiliated with the Illinois Agricultural Association.

In developing the grain marketing program in Illinois it is not the intention to have identical patterns in every county. Instead, there will be variations to fit the particular needs of producers. A study of the entire program will show that regardless of location, any grain grower in Illinois can fully benefit from the overall grain marketing program. Such a study will also reveal that while patronage refunds are emphasized, greater emphasis has been placed upon the other more important benefits to be derived from a sound, orderly, marketing procedure.

Fruit and Vegetable Marketing

Practically all activities of the fruit and vegetable department are carried on through the Illinois Fruit Growers Exchange at Carbondale. Services have been concentrated in southern Illinois where most of the fruit is grown in the state.

Marketing problems in this department are probably less like those of any other. Orchards are not sufficiently concentrated and the products, mainly apples and peaches, do not lend themselves well to centralized grading and packing. Consequently most of the fruit is graded and packed right on the farm.

Fruit, too, is highly perishable and often must be sold the day it is harvested. Buyers must have a dependable source of supply. Buyer and producer both benefit, therefore, when a group of producers satisfy this demand through their cooperative.

Since fruit is graded and packed in so many different sheds, it is most difficult, even with constant supervision, to get exactly the same quality in each grower's pack. For that reason,

(*Continued on page 26*)

REMEMBER FARM SAFETY WEEK, JULY 25-31

AN OPEN LETTER TO FARM WOMEN

★ ★ ★

DEAR Mrs. R. F. D. Illinois:

Would you like to help us save the lives of 217 Illinois farm people during the coming year? We are sure you would. That's the reason I write you now. Of course, you are very busy at this time of year with gardening, canning, preparing meals and all. And the kids being home from school makes extra work, too. But what we're going to ask you to do won't take much more time. A few extra minutes each day—but it may save a lifetime.

Maybe you haven't thought about it much, but 217 farm people in Illinois lost their lives last year in farm home and work accidents, not to mention a similar number involved in traffic casualties.

You may wonder why this appeal is made to you, especially when you learn that only 12 of the 217 deaths were farm women. Well, 61 of those deaths were little children. Some of these were toddlers who escaped the eye of a busy mother for a few brief moments—just long enough to tumble to their deaths, perhaps into an open stock tank, or from a wagon or piece of machinery.

Some of these innocent children are no longer here because they stood too close to cows or horses, or fell from the back of a frisky colt. Others tumbled from lofts, or from roofs and trees. One killed himself and one killed another child in handling firearms which should have been locked up.

Still more kiddies, 17 in all, lost their lives with farm machinery intended for men.

"What," you may ask, "can I do about it?" See to it that wells and stock tanks are covered, that children are provided safe places to play and safe toys to play with. Turn a deaf ear to the pleas of small children to "ride on the tractor with daddy." Keep them out of harvest fields where they may be overlooked by the machine operator. And make sure that poisons, explosives, and flammable liquids are kept away from inquisitive hands.

True, a person shielded from everything throughout childhood will develop the self-reliance of a week-old pup. But a child, when exposed to things which his undeveloped mind is not ready to understand or his small body able to control, is much more apt to appear in accident statistics.

Looking at the larger share of deaths, we naturally find farm men topping the list. Farming is one of the most hazardous jobs in the world. Maybe that is why 144 Illinois farmers lost their lives at work last year. Perhaps it is because they usually work alone or because they have no organized safety campaign at work which forces them to use safe machinery and follow safe practices. Large industrial plants, you know, have these precautions and workers operate under the watchful eye of a safety engineer most of the time.

A plant safety engineer of my acquaintance recently said that he sent safety materials and literature to the wife of every workman, saying, "We keep your husband safety-conscious eight hours a day—*you* take care of him the other sixteen!"

Well, ladies, I won't try to get sentimental about what you and your family stand to lose if the bread-winner is removed—you know more about that than I. But I would like to ask you to help develop a safety consciousness in your house which works not only 16 hours a day, but 24! And not just during Farm Safety Week, but all through the year!

Please think about this when you observe National Farm Safety Week, July 25-31.

Yours truly,

W. W. Whitlock

W. W. Whitlock, Director IAA
Department of Safety and Public Health

THE STORY OF FARM BUREAU

THE epic story of the American Farm Bureau movement is now available in the new book just out entitled "The Farm Bureau through Three Decades." This Farm Bureau history is being sponsored by the American Farm Bureau Federation. The author is Orville M. Kile of Washington, D. C., a member of the AFBF information staff in the early years.

The book is printed on fine book paper, cloth bound, illustrated, and numbers 425 pages. You can secure a copy by sending your check or money order for $3.50 postpaid, to the American Farm Bureau Federation, 58 East Washington Street, Chicago 2, Ill.

Kile has been intimately connected with the Farm Bureau movement through the years. He has attended every AFBF convention but one.

"The Farm Bureau through Three Decades" may well be considered necessary reading for all Farm Bureau leaders.

PLAN BIGGEST, BEST Sports Festival Aug. 26-27

Trap Shoot to be held August 6

DISTRICT folk festivals and softball contests will mark the weeks ahead in July and early August as teams compete to represent their counties in the ninth Illinois Farm Sports Festival to be held Aug. 26-27 at Champaign-Urbana.

District contests will be held in the Rural Youth, all-county, 35'ers, and 4-H girls and boys softball divisions where nearly 200 teams have already been entered. These district contests should be completed before Aug. 14.

District folk festivals have been scheduled from July 19 to Aug. 7 and will be held at Mendon, Effingham, Galesburg, Champaign, Oregon, Yorkville, Carlinville, Eureka, Elgin, and Carbondale. Sixty-one counties already have submitted entries in various music, drama, and dance events. Persons or groups may enter the folk festival most convenient in location to them.

This should be the biggest year in the history of the Sports Festival. Roy Johnson, festival secretary, says that in the bowling contests alone nearly 1100 individuals took part. District bowling tournaments were held in May and June when alleys were still open.

Another sports event, a part of the state Sports Festival, will share the spotlight with softball in August. The state skeet and trap shoot, which annually draws thousands of Illinois sportsmen, will be held Aug. 6 at the Champaign-Urbana Gun Club, three weeks in advance of the state Festival.

This advance in the date of the trap and skeet shoot was made to avoid a conflict with the Grand American Trap Shoot, and real competition is expected this year.

William Holderman, trap chairman from Grundy county, and Glen Chenoweth, skeet chairman from Livingston county, report that 40 counties plan to send teams, and three champions from last year's Festival will be back to defend their titles. These are the skeet team from Logan county, the Class A trap champions from Tazewell, and the Class B trap winners from Henry county.

Counties will earn points for taking part in the county and district festivals as well as in the finals at the state festival. First and second place teams in the district softball games and all entries in the folk festival contests with a class A rating will be eligible to enter the state festival.

Two of the highlights of the Sports Festival will be the entertainment on Thursday evening and Friday afternoon. The Thursday evening program will consist of three separate events: the square and folk dance jamboree, the swing carnival and dance, and the evening musical revue consisting of selected folk festival numbers.

The grand finale program on Friday afternoon will be highlighted by the WLS Dinner Bell program, songs by the champion barber shop quartet, hog-calling and watermelon eating contests, the woodchopping finalists, and announcement of awards.

In the district bowling contests nearly all results have been reported. The high scores so far in the men's open class have been made by Ogle county, 2716 points, Macoupin, 2709, and Champaign, 2689. High individuals were: Degen, Randolph, 620; Kaney, Ogle, 610, and Russell, Will, 610.

In the women's open class St. Clair leads with 2145 points, DeKalb is second with 2108, and Ogle is third with 2105. High individuals are: Dietz, St. Clair, 528; Dufner, Macoupin, 522, and Morey, Douglas, 489.

(*Continued on page 26*)

How Many Pigs Are You Going to Raise This Fall?

WONDERING how many pigs to raise this fall? Here are some facts from Larry Simerl, U. of I. farm economist, that may help you decide.

1. With average or better weather, the 1948 corn crop will be one-fifth to one-fourth larger than the 1947 crop.

2. There can be no rapid increase in the numbers of hogs, cattle, and poultry to use up this larger supply of corn. Therefore, corn will be much more abundant, in comparison with the numbers of livestock to eat it, than it has been during the past nine months.

3. When the new crop of corn becomes available, corn and other feeds probably will become relatively cheaper than hogs. This situation should prevail throughout the period when the 1948 fall pigs will be fed and marketed.

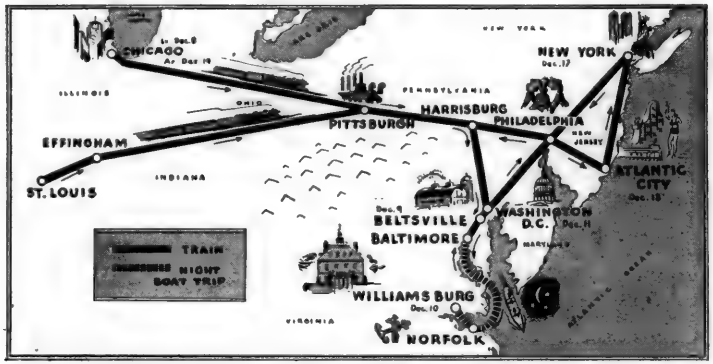
4. Unsatisfactory prices for hogs in recent months have discouraged many inefficient hog producers. Judging from past experiences in similar situations, the 1948 fall crop may be five to 15 per cent smaller than the 1947 fall crop which is now being marketed.

5. Market supplies of meats which compete with pork will be considerably smaller in 1949 than in recent years.

Simerl concludes that there are no "sure things" in farming, but for hog producers who know their business, a good-sized fall pig crop looks like a good bet.

Here's Your Chance

A TRIP TO THE CONVENTION



The IAA is making plans for 500 persons to take the trip, about equally divided between the eastern and southern routes. Two folders giving complete details are being prepared and will be available soon to those interested.

In the meantime you can be sure of a place on one of the trains by filling out the reservation request printed on these pages. After the IAA receives your reservation request it will be forwarded to the railroad handling your trip.

Hotel reservations for the convention in Atlantic City may be made through the IAA whether you are going by special train or are arranging your own transportation. All letters relating to the trip and convention, including reservations for the special trains and hotel rooms during the AFBF annual meeting, should be ad-

IT'S A return engagement by popular request. Yes . . . . a "relax and enjoy yourself" train trip next December to the American Farm Bureau Federation convention in Atlantic City.

You'll recall the swell time Illinois folks had on their trip to the AFBF convention in California. They've been asking us: "Be sure to charter a train for the next convention."

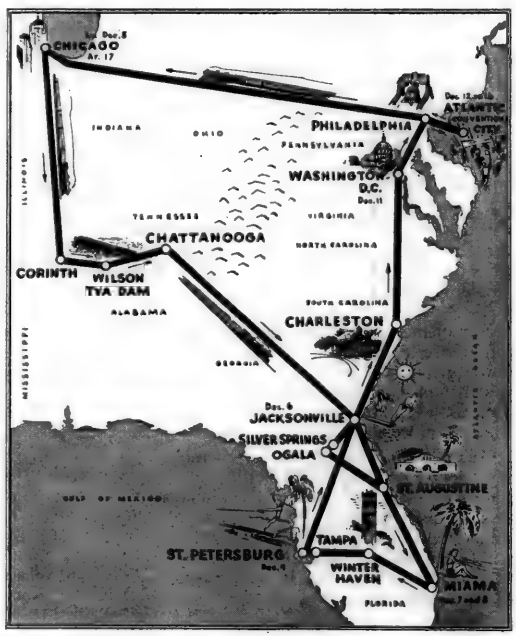
We've gone one better than that! We're giving you a choice of two special train trips. One train will go a southern route through Florida and up along the east coast. A second train will travel an eastern route going through Norfolk, Va., en route to Atlantic City and returning to Chicago by way of New York City. Both trains will go through Washington, D. C.

Every day of the trips to the convention has been planned as a sightseer's holiday. Roy Johnson, IAA director of special services, says the railroads have arranged a number of side trips along the way, varying in interest from a trip in a glass-bottom boat through tropical Florida waters to a conducted tour of the U. S. Department of Agriculture experiemental farm at Beltsville, Md.

The southern trip will be longer by three days and will provide a greater variety of side trips. It will cost about $220, depending on the type of travel accommodations desired. The eastern trip will cost about $175. Both figures include the cost of the railroad ticket, most meals en route, tips, and special sightseeing junkets.

Map (above) shows stops and arrival dates along the route of the eastern trip on the Pennsylvania Railroad.

Map (right) shows major stop-overs and arrival dates along the route of the southern trip on the Illinois Central Railroad.



YOU CAN GO TO ATLANTIC CITY THRU THE EAST OR VIA FLORIDA

dressed to Roy Johnson, Illinois Agricultural Association, 43 E. Ohio Street, Chicago 11, Ill.

The southern tour will leave on the Illinois Central Railroad Dec. 5. The train will arrive at Atlantic City on Dec. 13 and will leave after the convention on Dec. 16, arriving in Chicago the next day.

Features of this trip incude: A tour of Wilson Dam, a part of the TVA system; a bus trip through St. Augustine, Fla., oldest city in the United States; two days of sightseeing at Miami; stops at St. Petersburg and Sarasota, and sightseeing trips at Charleston, S. C., and Washington, D. C.

The eastern train caravan will leave Chicago Dec. 8 on the Pennsylvania Railroad, crossing Indiana, Ohio, and Pennsylvania, and arriving at Washington, D. C. the next day. Special features will include: sightseeing trips through various public buildings in Washington; an overnight cruise on the Potomac River to Norfolk, Va.; a motor trip to colonial Williamsburg, Yorktown, and Langley Field; a tour and luncheon at Beltsville, and tours of Fort Meyer, Mt. Vernon, and other historical sites. The train will arrive at Atlantic City on Dec. 13 in time for the convention.

It will leave Atlantic City on Dec. 16 and will return to Chicago by way of New York City where tours have been arranged of Radio City, United Nations Headquarters at Lake Success, and a sightseeing trip of upper and lower New York.

Each railroad will have representatives who will be in charge of the special trains. Charles P. McEvilly will represent the Illinois Central Railroad and will handle details of the Southern trip. He is the district passenger agent who did such a fine job handling the special train which carried the Illinois Farm Bureau folks to the AFBF convention in San Francisco in 1946. W. E. Millspaugh city passenger agent, will handle reservations for the Pennsylvania Railroad.

Roy P. Johnson
Illinois Agricultural Association
43 E. Ohio Street, Chicago 11, Ill.

RESERVATION REQUEST

Dear Sir:

Here's my request for reservations on the IAA special train. Please make train reservations for the following number of persons: ..... These train reservations are for the following route: (Check route desired) (a). Eastern trip on Pennsylvania Railroad ..... (b). Southern trip on Illinois Central Railroad .....

I want my reservation for the following type of Pullman car: (Check type desired) (a). Intermediate Pullman car: ..... (b). Standard Pullman car: .....
(Standard Pullman cars are newer and more expensive but both types of cars provide the same travel comforts).

I wish the following type of berth:

(a). Lower for one .....
(b). Upper for one .....
(c). Lower for two .....
(d). Compartment for two .....
(e). Compartment for three .....
(f). Drawing room for two .....
(g). Drawing room for three .....
(h). Drawing room for four .....
(i). Coach seat .....

I also wish to reserve hotel reservations while at Atlantic City for the following number of persons: ..... Following are the names and addresses of members of my party:

Name: ..... Address: .....
Name: ..... Address: .....
Name: ..... Address: .....

.....
(my name)

.....
(my address)

EASTERN TOUR

The following prices are the round trip train fare from Chicago to Atlantic City and return. They are subject to change between now and December.

One in lower:	$170.45
One in upper:	$170.30
Two in lower:	$167.10 (each)
Two in compartment:	$179.85 (each)
Two in drawing room:	$186.25 (each)
Three in drawing room:	$177.65 (each)

In addition to these Pullman accommodations it will be possible to ride by coach since the distances on this trip are not as great as the southern trip. A coach ticket will cost approximately $135.

SOUTHERN TOUR

The following prices are the round trip train fare from Chicago to Atlantic City and return. They are subject to change between now and December.

Intermediate Sleeping Cars

One in lower: $219.31. One in upper: $212.17.
Two in lower: $203.66 (each person)

Standard Sleeping Cars

One in lower: $234.26. One in upper: $223.32.
Two in lower: $211.14 (each)
Two in compartment: $258.64 (each)
Three in compartment: $242.10 (each)
Three in drawing room: $233.03 (each)
Four in drawing room: $236.77 (each)

Front Cover

THE old statehouse at Vandalia in Fayette county is the 14th of our series of picturesque and historic Illinois scenes. Abraham Lincoln served part of his first term in the Illinois legislature in this building on its completion in 1836. When built it cost $16,000.

The original state capital was moved in 1820 from Kaskaskia to Vandalia and in 1839 to Springfield. The cover picture shows the third Capitol building built in Vandalia. The first was destroyed by fire and the second considered inadequate.

On Feb. 25, 1837 the Assembly passed a bill providing that the state capital be removed from Vandalia to some place nearer the center of the state. Three days later Springfield was chosen. Gov. Thomas Carlin ordered all state records moved to Springfield by July 4, 1839. However, the state government did not actually function in Springfield until December, 1839.

FLY-FREE PROGRAM IN HIGH GEAR

A FLY-FREE state this summer becomes one step nearer reality as farmers move into the final stages of their campaign to rid their farms and communities of flies.

Spraying of buildings and stock started on many farms early this month after a clean-up campaign to rob flies of breeding places had been completed.

The sale of DDT, a new and powerful fly killer, has been increased many times over last year. The Illinois Farm Supply Company reports that their sales of DDT have increased more than five times over last year.

George E. Metzger, who has led the campaign for the Illinois Agricultural Association, says that most farms and many cities the size of county seat towns and smaller will be free from flies this summer.

For the last two years Iowa has conducted a similar fly-free program that has been popular and successful.

• • •

In many counties urban and rural groups are working together closely. In Livingston county the farm adviser, W. F. Coolidge, working in cooperation with commercial spray men, has held demonstrations on farms near Dwight, Chatsworth, Fairbury, Graymont, Flanagan, and other communities. More than 400 farmers have attended.

In addition to the spraying on the farms, two urban communities in the county, Pontiac and Fairbury, are planning extensive fly eradication programs. The entire program has been given strong support by the newspapers in the county.

Most of the farmers who have purchased DDT materials for spraying flies are buying the 50 per cent wettable powder. It is a safe livestock spray, easy to apply, and is inexpensive. For the average Illinois livestock farm $10 worth of DDT should rid the farm of flies all summer.

In spraying livestock, dairy cattle are sprayed weekly with a spray containing one-half pound of 50 per cent DDT water-wettable powder to three gallons of water.

Beef cattle are treated once a month with a spray containing one-fourth pound of 50 per cent DDT wettable powder in three gallons of water.

In buildings and along fences it is not necessary to spray directly on the insect. DDT kills by paralyzing the insect's nerve centers and very small amounts on any part of the fly's body will penetrate and kill. Flies pick up a killing dose by walking on DDT residue.

The state-wide campaign is being sponsored by the Illinois Agricultural Association, the Illinois Natural History Survey, the University of Illinois College of Agriculture, and the State Department of Public Health.

Uncle Sam's Asking Farmers To Raise 15% More Pigs This Year For '49 Markets!

Other Meats Expected to Be In Short Supply....

RURAL SCHOOL BUS TRANSPORTATION MUST BE SAFE

"I DON'T want my six-year-old child meeting a school bus at 6 o'clock in the morning in six below zero weather. Besides bus transportation is unsafe." Variations of the above statement have been heard so many times that it has been catalogued as the SIX-SIX-SIX objection."

Meeting the bus at 6 a.m. in sub-zero weather is the worst possible situation and rarely, if ever, should be tolerated. The second part of the statement is not quite accurate. No more than it would be accurate to say that train, or ship transportation is unsafe.

Bus transportation is much safer than passenger car transportation. According to figures furnished by the National Safety Council, school bus fatalities in the United States are only .047 per one million passenger miles while passenger car fatalities are 3.7 per one million passenger miles.

School bus transportation has increased many times in Illinois since the school reorganization movement started. According to figures from the state superintendent's office, Illinois had 625 school buses in January 1945, 2200 in February 1948, and the figure after school reorganization is fairly complete, may be beyond 7000.

Why Are Buses Safer?

Perhaps a great many people would be interested in knowing what attempt is made or can be made by school bus operators to make school bus transportation safe. In the first place, all school buses in Illinois are given a rigid safety inspection in December and August of each year at a regular bus inspection headquarters. Any deficiencies must be corrected before the bus is approved. Without this approval at the inspection headquarters, no money is forthcoming from the state as reimbursement for pupil transportation.

Also the driver must have a chauffeur's license, must have had experience driving buses or trucks, must pass a health examination, a mental examination on Illinois traffic laws, and an examination in actually driving the bus, the two latter examinations being given by members of the state police.

Then the administrative head of the school system has the responsibility of seeing that the school buses are in safe operating condition and of planning the routes with an eye to the maximum safety, comfort, and convenience of those served. Among other duties he is to plan the school program for those children who arrive early or remain late on account of transportation schedules, so that they will be under supervision at all times, and, if possible, have a planned program of activity.

The bus driver has the responsibility of keeping the bus in repair or reporting needed repairs to the administrator. Also he must maintain discipline and report unusual cases of misconduct on the bus to the administrator. The driver is in full charge of the bus and the pupils while enroute. He must be obeyed. Through a large rear view mirror he has a reasonably good vision of what happens in the bus. The driver can stop the bus and correct a disobedient child or put him off the bus to walk home if the pupil's conduct is persistently unsatisfactory. It has been found that this punishment is a very powerful "persuader."

Pupils' Responsibility

In addition to the responsibilities of bus drivers and administrators, the pupils have some definite responsibilities. They must obey monitors or patrols on duty. These officers are generally older children, charged with the duty of assisting younger pupils on and off the bus and helping them to get across traffic lanes. The stop arm on the bus is always to be extended when the bus is stopped if the bus is being used to transport pupils. The state law requires that all traffic from either direction stop while the school bus is stopped to take on or let off pupils on the highways. The bus driver is asked to report to the administrator the license number of any driver who fails to heed the stop signal, who in turn reports such cases to the proper state authorities.

Pupils may be assigned seats in the bus and allowed to move only by consent of the driver and when the bus is not in motion. Pupils must not use tobacco while being transported nor throw waste paper or other rubbish on the floor of the bus. Pupils must not extend their heads or arms out of bus windows.

Buses in Motion

When buses are in motion, the windows must be kept at a level high enough to discourage the thrusting of head or arms out of the windows. Windows cannot be lowered below a safe height in the newer buses. Pupils must not try to get on or off the bus or move about while the bus is in motion. When pupils must cross the road to be picked up, the driver, (if the patrol is not used) after looking for approaching cars, motions them to cross. Pupils must await the proper signal and cross promptly. Similar precautions are taken for unloading pupils.

These responsibilities of the bus driver, the school administrator, and

Farm Bureau Folks In Pictures

This excellent portrait is of Mary Marshall, youngest grandchild of H. T. Marshall, La Salle county, who has been prominent in Farm Bureau affairs for many years.

Mrs. Bernice M. McPheron, Macon county, calls this picture of her home "Apple Blossoms and Fried Chicken."

With an empty pipe Pat Kerstion, Evansville, Ind., does a good job of imitating Grandpa Charles Gregan, Lawrence county, during visit to grandparents farm.

Accompanied by her collie, Bob, Carolyn Martin, daughter of Mr. and Mrs. J. N. Martin, White county, makes music with her banjo.

EDITOR'S NOTE: Picture page entries should be addressed to Picture Editor, Illinois Agricultural Association, 43 East Ohio, Chicago 11, Ill. If you wish picture returned, enclose self-addressed stamped envelope. Entries are judged on originality, clearness, and interest. Avoid shots of persons merely looking toward camera. Best picture receives $5. Others published receive $1.

* * *

PICTURE PAGE NOTE: The picture editor is particularly interested at this time in scenes of picturesque and historic interest in Illinois for use on the picture page and on the Farm Bureau calendar. Pictures used on the calendar will receive, besides the regular picture page prize, an additional prize of $10.

* * *

PICTURE OF THE MONTH

On vacation at Eagle Lake in Canada, Kenneth (left) and William Palmer, sons of Harvey Palmer, Bureau county, show the results of a nice day's fishing. This shot has all the elements of a good picture — sharp focus, excellent exposure, strong human interest, and lack of camera-consciousness.

RURAL SCHOOL BUS TRANSPORTATION

"I DON'T want my six-year-old child meeting a school bus at 6 o'clock in the morning in six below zero weather. Besides bus transportation is unsafe." Variations of the above statement have been heard so many times that it has been catalogued as the SIX-SIX-SIX objection."

Meeting the bus at 6 a.m. in sub-zero weather is the worst possible situation and rarely, if ever, should be tolerated. The second part of the statement is not quite accurate. No more than it would be accurate to say that train, or ship transportation is unsafe.

Bus transportation is much safer than passenger car transportation. According to figures furnished by the National Safety Council, school bus fatalities in the United States are only .047 per one million passenger miles while passenger car fatalities are 3.7 per one million passenger miles.

School bus transportation has increased many times in Illinois since the school reorganization movement started. According to figures from the state superintendent's office, Illinois had 625 school buses in January 1945, 2200 in February 1948, and the figure after school reorganization is fairly complete, may be beyond 7000.

Why Are Buses Safer?

Perhaps a great many people would be interested in knowing what attempt is made or can be made by school bus operators to make school bus transportation safe. In the first place, all school buses in Illinois are given a rigid safety inspection in December and August of each year at a regular bus inspection headquarters. Any deficiencies must be corrected before the bus is approved. Without this approval at the inspection headquarters, no money is forthcoming from the state as reimbursement for pupil transportation.

The stop arm on the bus is always to be extended when the bus is stopped if the bus is being used to transport pupils. The state law requires that all traffic from either direction stop while the school bus is stopped to take on or let off pupils on the highways. The bus driver is asked to report to the administrator the license number of any driver who fails to heed the stop signal, who in turn reports such cases to the proper state authorities.

Pupils may be assigned seats in the bus and allowed to move only by consent of the driver and when the bus is not in motion. Pupils must not use tobacco while being transported nor throw waste paper or other rubbish on the floor of the bus. Pupils must not extend their heads or arms out of bus windows.

Buses in Motion

When buses are in motion, the windows must be kept at a level high enough to discourage the thrusting of head or arms out of the windows. Windows cannot be lowered below a safe height in the newer buses. Pupils must not try to get on or off the bus or move about while the bus is in motion. When pupils must cross the road to be picked up, the driver, (if the patrol is not used) after looking for approaching cars, motions them to cross. Pupils must await the proper signal and cross promptly. Similar precautions are taken for unloading pupils.

These responsibilities of the bus driver, the school administrator, and

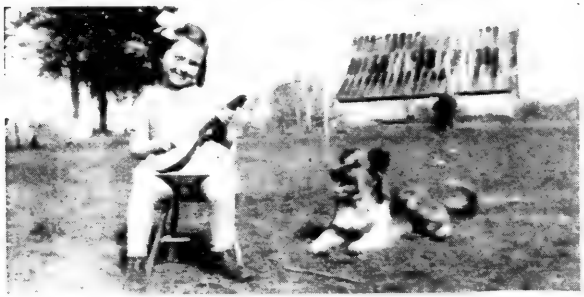
Farm Bureau Folks In Pictures

This excellent portrait is of Mary Marshall, youngest grandchild of H. T. Marshall, La Salle county, who has been prominent in Farm Bureau affairs for many years.

Mrs. Bernice M. McPheron, Macon county, calls this picture of her home "Apple Blossoms and Fried Chicken."

Accompanied by her collie, Bob, Carolyn Martin, daughter of Mr. and Mrs. J. N. Martin, White county, makes music with her banjo.



With an empty pipe Pat Kerstien, Evansville, Ind., does a good job of imitating Grandpa Charles Grogan, Lawrence county, during visit to grandparents farm.

EDITOR'S NOTE: Picture page entries should be addressed to Picture Editor, Illinois Agricultural Association, 608 East Ohio, Chicago 11, Ill. If you wish picture returned, enclose self-addressed stamped envelope. Pictures are judged on originality, cleanness, and interest. Avoid shots of persons merely in front of camera. Best picture receive $5. Other published receive $1.

PICTURE PAGE NOTE: The picture editor is particularly interested at this time in receiving picture stories of interest in Illinois for use on the picture page and on the Farm Bureau calendar. Pictures used on the calendar will receive, besides the regular picture page price, an additional prize of $10.

* * *

PICTURE OF THE MONTH

On vacation at Eagle Lake in Canada, Kenneth (left) and William Palmer, sons of Harvey Palmer, Bureau county, show the results of a nice day's fishing. This shot has all the elements of a good picture — sharp focus, excellent exposure, strong human interest, and lack of camera-consciousness.

Top: Hogs on Smith farm are raised on clean ground. These three sows raised 25 pigs, farrowed in individual houses. Right background is farmstead. Center: Gerald Smith, owner, second from right, shoots serum into armpit while Spencer Grover injects virus into ham. Holding pig are Ernie Jacobs, left, and Noel Sheffield, right. Lester Smith, owner's son, holds extra syringe at far right. Bottom: These healthy pigs in pen awaiting vaccination are product of good feeding plus proper sanitation.

PROPER FEEDING + CAREFUL SANITATION =

HIGH HOG PROFITS

GERALD Smith, a quiet, soft-spoken farmer near Leland in La Salle county, has a record as one of the best hogmen in Illinois.

Year after year he has been outstanding in the membership of the Farm Bureau Farm Management Service to which he has belonged for 17 years. One year recently his record on hog production was the best in the state.

Smith employs no practices in raising his hogs that are not generally known and used by good farmers. His formula combines sanitation with proper feeding. It works well on the 600 pigs he raises each year on his 160-acre farm.

This formula of sanitation and proper feeding has paid Smith handsomely. He says that in the 20 years he has been farming his pigs have returned from $150-$170 for each $100 of feed consumed.

"They've helped to pay for this farm too," Smith added. He bought the place in 1938, and is still a man of modest means. For Smith, like many farmers, has had to earn his way. He started as a hired man in his home county, Jefferson, and worked four years for other farmers before starting for himself. He farmed two years in Jefferson county and 11 in La Salle before buying the farm he is now on.

As part of his sanitation program Smith farrows his pigs on clean ground away from the buildings. He uses individual houses to farrow his pigs. Some of these houses are 20 years old. They not only last well but are simple to build and easy to keep clean and warm. Smith would have no other kind. His 47 gilts raised 320 pigs, an average of seven, and all were farrowed in these houses.

He also vaccinates his pigs against hog cholera as a matter of routine. He generally works with four or five neighbors as a team on this job. This is one insurance policy Smith wouldn't do without.

Smith changes his pasture for his pigs each year. He uses only alfalfa for pasture. They are self fed from the time they first start to eat grain until they are shipped to market.

He follows closely the experiments and recommendations of the colleges of agriculture at Illinois, Purdue, and other state universities on feeds and feeding practices. He relies chiefly on oats, corn, alfalfa meal, buying soybean oil meal and linseed meal for protein. He feeds tankage when it is available.

Smith spends time with his hogs when they need it, particularly at farrowing time. He keeps the feed hoppers full and sees to it that his pigs are well bedded, particularly in the spring months, but does not pamper his animals.

Feeding and caring for his 600 hogs this spring, including more than 200 heavy fall hogs in the fattening pen, takes Smith and his son, Lester, about two hours a day normally.

The fattening hogs are sheltered in a cattle barn and feed on a concrete floor next to a large corn bin. They are fed in large self feeders which are filled from wagons. This helps to cut down on the time needed to care for his hogs.

Although 1948 may prove to be a bad hog year for Smith, he says he'll keep at it, although it may mean cutting down on fall litter numbers. Good hog years always follow bad years, Smith has found, and it doesn't pay to jump in and out of the hog business.

One of Smith's good hog years was in 1932 when his hogs returned $192 for each $100 worth of feed eaten. His total profit was low, however because corn was worth only 19c a bushel. (*Continued on page* 18)

In top picture Director Webb (left) is shown with his Dad at Illinois Farm Supply gas tank. 2. At home with wife and daughters, Sue, and Carolyn. 3. In front of Webb home with daughters. And (bottom) showing to Jack Howlett, southern Illinois organization director, grass waterway and concrete spillway to prevent erosion caused by carelessness of previous owner.

IAA DIRECTOR FINDS

Grass Farming most profitable

This is the 16th in a series of articles to further acquaint you with the men who represent you on the Illinois Agricultural Association board of directors.

"GOOD fences make good neighbors," an American poet once said. It's true, too, that good fences are made by good farmers. So when the Webbs, Albert and his father, J. S., rebuilt their fences several years ago, they did something which symbolized the sturdy farm background of the Webb family.

Into six feet of concrete they sank heavy railroad rails for corner posts. It would take a tractor to budge them. The Webbs have been on the land east of Ewing a long time — five generations of them. Since 1818 when Albert's great great grandfather came from Kentucky. The Webbs build things to last, even fence posts, because they plan to be there for a long time to come.

As Illinois Agricultural Association director from the 25th district, Albert Webb has represented the counties of Randolph, Perry, Franklin, Jackson, Williamson, Union, Pulaski, and Alexander, since 1946. He succeeded August Eggerding of Randolph county.

The Webbs, father and son, consider themselves "grass farmers." They operate 600 acres in partnership and raise pure bred polled Herefords as their principal activity.

Director Webb attended the local rural school and the Ewing College Academy at nearby Ewing. Later he enrolled at Southern Illinois University and received his degree in commerce at the University of Illinois in 1928.

Following graduation he taught at Dahlgren high school for three years then joined the Farm Security Administration as a supervisor. He helped make some of the first Tenant Purchase Loans. Later he served for two years as a land appraiser for the same loans in southern Illinois.

His travels in southern Illinois familiarized him with problems of erosion and over-cropping, so when he returned to the home farm, he promoted contouring and terracing. He banned up-and-down-hill plowing and turned large tracts of cropland into pasture and hay.

By careful selection, Webb has made a great improvement in the beef cattle herd. The bull, A.L.F. Choice Domino 10, is a five-eighths brother to the world's champion bull shown at Knoxville in 1947. About 75 cows are maintained and the young bulls are sold off as breeding stock.

To use pasture lands efficiently, he carries a flock of 125 breeding ewes and buys about 600 additional feeder lambs each year. Webb buys 300-400 baby chicks each year and keeps a laying flock of around 200 hens. These are disposed of about the time they are one year old. A few pigs are raised for the family's own use. Director Webb likes horses and usually has a few

Ass't. Editor, IAA Record

registered mounts on the farm.

Of the cropped land, an average of 100 acres are in wheat, 60 in corn, and 40 in soybeans. For winter feeding he puts up corn silage and alfalfa and clover hay.

When the Webbs took over an 80-acre field about 15 years ago it was badly eroded. Today it is an excellent pasture with some of the first terraces ever built in the community. The eroded gully which ran through the heart of the field was once deep enough to swallow 100 automobiles. Now it is partially filled in and grassed. Water runoff is slowed down by the terraces and four concrete spillways.

All of the fields have been limed two or three times. All but 60 acres have had applications of 1,000 pounds of rock phosphate to the acre, and all have had some potash and nitrogen. The Webbs now spread concentrated fertilizers shortly before planting.

Webb's grandfather was the first farmer in the community to use limestone and phosphate about 40 years ago when the University of Illinois set up an experiment field at Ewing. Director Webb follows the precedent set by his grandfather and goes a step further with a balanced program of plant feeding.

A number of labor saving devices are used on the Webb farm. For instance, silage is unloaded by pulling a false endgate from the front to the back of the wagon or truck, thus eliminating hand work. He uses a field cutter and blower besides. Baled hay is raised to the ceiling of the barn where it is dropped on a conveyor and moved to any place in the barn without any rehandling necessary. Director Webb designed and built the conveyor.

His father was a charter member of the Franklin County Farm Bureau. About that time Albert had a joint membership with him. Director Webb was elected to the Franklin County Farm Bureau board about 1930. He was appointed secretary and served four years. About 1937 he became president of his Farm Bureau and served four years. He is chairman of his district soil conservation committee and chairman of the agricultural committee of the Benton Chamber of Commerce.

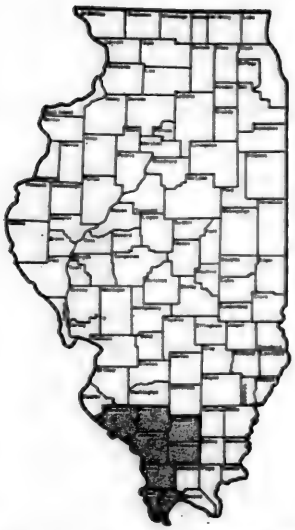
Webb is also on the state committee of the Farm and Home Administration. He is a member of the Benton Lions Club and is a 32nd degree Mason. He is also affiliated with the East St. Louis Shrine. He is a steward in the First Methodist Church at Benton.

Director Webb keeps the quality of his polled Herefords high with top quality sires. Here is his number one prize bull.

He was president of his local school board when consolidation was being considered and voted to buy, with other school districts, the facilities of Ewing College (it closed in 1925). When the trial consolidation at Ewing College worked, Webb voted with the majority for district consolidation the following year.

Mrs. Webb is the former Ruby Stokes of West Frankfort. He has three children: Frances Jean, 17; Carolyn Anne, 7; and Sue Elaine, 5.

"Our family has been wrapped up in Farm Bureau since its beginning," Webb said. "We try to support it 100 per cent. I feel sure we always will. It seems the only sensible thing for us farmers to do — that is, back your Farm Bureau. By doing that you help your neighbors and yourself."



Shaded area outlines the 25th district which is represented on the Illinois Agricultural Association board of directors by Albert Webb of Ewing, Franklin county.

GISH NAMED IAA SOILS DIRECTOR

ROGER E. GISH, 34, of Paducah, Ky., has been employed as the new director of soil conservation activities for the Illinois Agricultural Association.

Roger Gish

Gish fills the position vacated by John R. Spencer who left the IAA in 1946 to work with a Lee county limestone company.

Gish, who received his master of science degree this spring from Iowa State College, has had more than 10 years of technical and practical experience in soil conservation work.

After two years at Paducah Junior College he worked for the U.S. Soil Conservation Service from 1935 to 1943 and was in the army from 1943 to 1945. From January, 1945, to March, 1946, he worked for the Geological Survey in Washington. He is married and has a six-months'-old daughter.

NAME CAMP MANAGER

Eugene H. Schroth, Paxton high school teacher, has been named manager of the 4-H Memorial Camp near Monticello. He was appointed for the 1948 season starting July 1.

The second annual Illinois conference of soil conservation district directors will be held at the U. of I. July 27-30.

Onions may be a vale of tears to Mrs. Housewife, but to Harold Gutzke, 35-year-old McHenry County farmer, they're $70,000 worth of joy. Gutzke is shown with a sack from the 21,000 bushel crop of Yellow Globes yielded from his 30 acres last year.

In top picture Director Webb (left) is shown with his Dad at Illinois Farm Supply gas tank. 2. At home with wife and daughters, Sue, and Carolyn. 3. In front of Webb home with daughters. And (bottom) showing to Jack Howlett, southern Illinois organization director, grass waterway and concrete spillway to prevent erosion caused by carelessness of previous owner.

Tennessee and Illinois Farm Bureau officials complete plans for July visit of 296 Tennessee Farm Bureau Federation members to 23 Illinois county Farm Bureaus and the IAA offices. Left to right, seated: O. R. Long, executive secretary, TFBF; Vernon Vaniman, AFBF; Clyde York, TFBF insurance staff. Standing, left to right: Larry Brandon, Indiana Farm Bureau Federation; George E. Metzger, IAA; and Roy Johnson, IAA.

Feeding Plus Sanitation Equals High Hog Profits

(*Continued from page* 14)

He has started to feed a few steers during the last several years but does not keep milk cows. He did, however, when he first started farming and would advise any young farmer starting out to keep four to six dairy cows. "It keeps those troublesome little bills paid up that seem to get to be a burden."

The buildings on the Smith farm are neat and trim. Everything is picked up. He likes to have things clean — and this goes for the way his pigs are raised because it just doesn't pay to court trouble, Smith says.

Since his farm is level and fertile much of the land is planted to corn and small grain to feed his hogs and cattle. This year about half the acreage was in corn and the rest in oats and alfalfa for hay and pasture.

Corn yields in recent years have averaged 102 bushels an acre. This provides between seven and eight thousand bushels of corn for Smith to feed his hogs. The amount of corn he raises does not limit his hog program because he feels that he can make just as much by buying and feeding corn, except for the elevator operator's commission, as from the corn he raises on his own farm.

A loyal and sincere booster for Farm Bureau in his home community, Smith buys his farm supplies through Farm Bureau when it is possible to do so. He is particularly sold on the Farm Bureau serum and virus which he buys by the case, and which he has used successfully for many years.

By location his farm is particularly suited to hog farming. Smith is located in a surplus grain area. He lives within 100 miles of the great Chicago stock yards and can get his hogs to market quickly by truck.

FOUR FROM ILLINOIS ATTEND NATIONAL 4-H CLUB CAMP

FOUR Illinois 4-H club members attended the 18th National 4-H club camp as representatives of the state's 45,000 club members in mid-June.

The lucky four were Athylin Harris, Pulaski county; Meta Marie Keller, La Salle; Gilbert Blankenship, Kendall, and Robert Willret, DeKalb. These young people were selected on the basis of outstanding 4-H achievements, leadership qualities, and accomplishment in project and community activities.

The Illinois Agricultural Association contributed $100 towards the expenses of the four delegates to Washington.

FORD COUNTY TOPS STATE IN SALE OF SECURITY BONDS

FORD county led the state in the Security Loan Drive report for the period ending May 22, according to a report issued in June by A. J. Rauen, state director of the U.S. Savings Bonds division.

Ford reached 86.8 per cent of its quota to top the entire state. Purchase of savings bonds by Ford county residents amounted to $392,411.

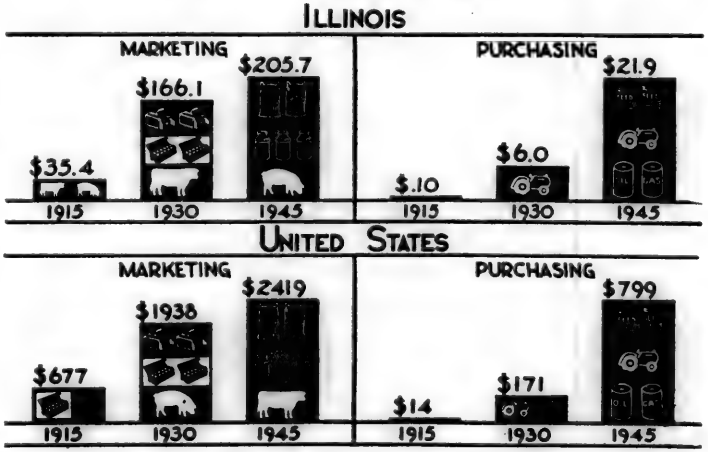
Other counties among the first ten in the state on goal percentage attainments were: Menard, Hamilton, Schuyler, Cumberland, DeKalb, Henderson, Kendall, Morgan, and Pike.

The Security Drive objective is to urge each and every citizen to provide financial security for himself and his family by investing to the limit in the world's best investment—United States Savings Bonds. Aside from financial security and stability for the nation, farmers will benefit individually by having adequate financial reserves to protect themselves from the natural hazards of their business.

EDGAR GRAIN MANAGER

Carlton Cannon, Coal City, has been employed to manage the newly organized Edgar County Grain Company starting July 1. The company will operate four elevators and sell plant food and Blue Seal feed in Edgar county.

Growth of Farm Cooperatives



In Millions of Dollars

Source: University of Illinois

How much did this wreck cost YOU?

Photo — Courtesy, National Safety Council

No, we know you weren't driving, and that this isn't your car. Yet this accident cost you money if you were insured by the same company that's going to pay insurance costs on this car. Every time a policy holder in your company smashes up a car, YOU share in paying the damage expenses.

That's why farmers pay a penalty — Farm Bureau members like yourself — when they carry auto insurance with companies who insure everybody, farmers and city folk alike. Congested, fast-moving traffic which urban drivers face daily means RISK . . . higher premiums to cover a higher percentage of loss. Farmers generally drive shorter distances at more moderate speeds. They deserve insurance rates proportionate to their lesser risks.

That's why Country Mutual Casualty Company offers Farm Bureau members the lowest possible rates. You are a PREFERRED RISK. See your Country Mutual Casualty representative tomorrow about fuller insurance coverage at lower cost to you, a Farm Bureau member.

Mason county representatives develop plans for rural young married group. The initial committee held a dinner meeting in Mason City and consisted of (left to right) Morris Bell, Home Adviser Mrs. John Fisher, Mrs. Morris Bell, Dick Stone, Mrs. Dick Stone, Alfred Mangold, Mrs. Alfred Mangold, and Farm Adviser Ray Watson.

RURAL YOUTH

By ELLSWORTH D. LYON
Director Young People's Activities

"BUILDING and maintaining membership has long been a problem in our group," were the frank, opening words of Bob Kuhn, DuPage, in answer to a question sent out to Rural Youth presidents on how to build and maintain membership. Such honest facing-up of membership problems is characteristic of successful Rural Youth groups.

Bob continues, "We are making some progress from knowledge gained through past experiences and some new experiments. People usually attend their first meeting through the invitation of a friend. A planned program is the first factor in holding the member's interest."

Youth Assistant, Edith Rose Ellias, Pulaski-Alexander, says, "One of the most successful means we have used in building membership was the visiting of seven high schools by president Kenneth Taake and myself. An invitation was extended to all eligible students. The principals were most cooperative."

Mariam McConville says La Salle has good results in getting members from rural high school graduates. Her follow-up publicity is good: "Recently we have been allowed a 15 minute program on radio station WLPO and through their kindness we can tell all in our county about our organization."

Joe Schneider, St. Clair, writes, "Planning our entire regular meeting ahead of time has contributed most in building and maintaining membership. Different individuals lead discussions and recreation at each meeting." He lists bowling, educational tours, square dancing, publicity, leading recreation for teen-age groups, and personal invitations as helpful. "By this plan we have about doubled our membership in six months."

Harold Schroeder's cheery note reads: "Here in our grand county of McLean we have a membership drive once a year." He advises, "Have a definite program with plenty of recreation." But he ends gloomily, "Our worst trouble in maintaining membership is that members continually get married."

"Over half of our group was married," according to Donald Duncan, Stark. "Reorganization in January and a new member campaign has resulted in a fair membership. We try to have an educational feature for each meeting, such as the study of farm safety."

Jackson almost completely changed its membership during the last year due in part to marriages. Clifford Seibel says, "We are trying to fit the programs to the needs and wishes of the younger group." Membership is gained largely through letters and by encouraging members to bring their friends.

Marian Rueter, Scott, writes that "Enthusiasm flared and a good many members were gained in our last membership drive." Charles Thornton, Sangamon, points out, "We seldom lose a member for any reason other than marriage. Rural Youth is stimulated by extra entertainment in addition to the regular meeting."

Odell Hensen, Marion, had around 20 new faces recently. Three weeks before the meeting a letter was sent to rural teachers asking for names and addresses of children whom they had taught who would now be of Rural Youth age. Letters were sent to many of them inviting them to attend the next meeting. More letters will now be sent out.

Recently organized JoDaviess, Wilfred Wolfram, first president, is sponsoring its first six-month series of programs. New committees coming from different parts of the county plan activities for each month. Each member is encouraged to bring a prospective member. Variety is stressed.

Dale Bauer leads Christian in a pre-meeting discussion of plans one week previous to the scheduled meeting. Ten people help make these monthly plans. Five of this 10 hold over from the previous meeting and five are new members, providing participation and interest. Bob Benton, Richland, uses a variety of equipment games to attract and hold new members.

Arden Chapple, Livingston, increases membership through hayrides and dances in different parts of the county, "conducts short business meetings, and provides good recreation." Harold Harms, Iriquois, thinks box socials and guest speakers are helpful. He refers to Miss Fannie Brooks' address on undulant fever as creating high interest.

Bill Schorfheide of Washington lists suggestions for building and maintaining Rural Youth membership: "(1) Well-planned and balanced programs, (2) Active standing membership, reception, and rotating committees, (3) Community service activities, (4) Meeting place in center of county, (5) Publicity, (6) Individual cooperation, (7) Use friendliness as your motto."

Eunice Lind, Bureau, is working for variety in the entire program with representatives participating in many different recreational, athletic, and educational activities.

Your answers to the problem of building and maintaining Rural Youth membership are appreciated and will be welcomed by others. Space permits only excerpts from all the letters received, but the various items in the letters are included on this page. Space does not permit a summary. Your reactions will be most welcome.

Assistant Farm Adviser George Kemp (right) congratulates Herbert Schick of Edelstein on winning Peoria county's Rural Youth skilled driver's test May 22 at Peoria. Sgt. F. E. Piper, state police safety section, looks on. It was the first skilled driver test of the year. Sgt. Piper assisted in conducting it.

These are the officers of the recently-organized Rural Youth group at Cisne for farm youth in the north end of Wayne county. Standing: Neal Auvil, Lucille Burton, Annamae McCracken, Warren Simmons, Joy Auvil. Seated: Don Hilliard, Alice Gochenour, vice-president; Genevieve Huffhines, president; and Catherine Simpson, secretary-treasurer.

MOTOR OIL SALE

SAVE MONEY Buy NOW!

Production costs in the oil industry are increasing. Some retail prices have already been raised to offset these higher costs. You can still order Illini or Penn Bond motor oil at no increase in price!

Hurry- Present prices may not last--avail yourself of this opportunity to purchase a large quantity of top quality motor oil at prices that today represent a substantial saving.

ILLINI PREMIUM MOTOR OIL

Illini Premium Motor Oil is our most popular oil. It makes up 60% of our total Motor Oil Sales to farmers. Illini is a new motor oil with five outstanding features of superiority: (1) Keeps a clean motor clean longer; (2) Provides a better piston seal; (3) Non-corrosive to bearing metals; (4) Holds resinous varnish formation to minimum; (5) Assured longer life for piston rings and cylinder walls.

PENN BOND MOTOR OIL

A 100% pure Pennsylvania paraffin base motor oil known as a "regular type of oil". It's an old standby preferred by many farmers.

For high speed, high temperature bearings.

WATER PUMP
Provides lubrication and seal in water pumps.

Mason county representatives develop plans for rural young married group. The initial committee held a dinner meeting in Mason City and consisted of (left to right) Morris Bell, Home Adviser Mrs. John Fisher, Mrs. Morris Bell, Dick Stone, Mrs. Dick Stone, Alfred Mangold, Mrs. Alfred Mangold, and Farm Adviser Ray Watson.

RURAL YOUTH

By ELLSWORTH D. LYON
Director Young People's Activities

"BUILDING and maintaining membership has long been a problem in our group," were the frank, opening words of Bob Kuhn, DuPage, in answer to a question sent out to Rural Youth presidents on how to build and maintain membership. Such honest facing-up of membership problems is characteristic of successful Rural Youth groups.

Bob continues, "We are making some progress from knowledge gained through past experiences and some new experiments. People usually attend their first meeting through the invitation of a friend. A planned program is the first factor in holding the member's interest."

Youth Assistant, Edith Rose Ellias, Pulaski-Alexander, says, "One of the most successful means we have used in building membership was the visiting of seven high schools by president Kenneth Taake and myself. An invitation was extended to all eligible students. The principals were most cooperative."

Mariam McConville says La Salle has good results in getting members from rural high school graduates. Her follow-up publicity is good: "Recently we have been allowed a 15 minute program on radio station WLPO and through their kindness we can tell all in our county about our organization."

Joe Schneider, St. Clair, writes, "Planning our entire regular meeting ahead of time has contributed most in building and maintaining membership. Different individuals lead discussions and recreation at each meeting." He lists bowling, educational tours, square dancing, publicity, leading recreation for teen-age groups, and personal invitations as helpful. "By this plan we have about doubled our membership in six months."

Harold Schroeder's cheery note reads: "Here in our grand county of McLean we have a membership drive once a year." He advises "Have a definite program with plenty of recreation." But he ends gloomily, "Our worst trouble in maintaining membership is that members continually get married."

"Over half of our group was married," according to Donald Duncan, Stark. "Reorganization in January and a new member campaign has resulted in a fair membership. We try to have an educational feature for each meeting, such as the study of farm safety."

Paint Now with

SOYOIL PAINT

If your farm buildings are in need of paint protection, order your Soyoil Paint now while the supply and prices are favorable. Deterioration of farm buildings is costly. Add protection, beauty, and charm to your farm with Soyoil Paint.

No. 5 Outside White

Soyoil #5 White Paint is the paint which is so popular with Illinois farmers. They like it's "white brilliance" which results from it's excellent hiding power. You will like it's superior lasting qualities which are obtained by carefully mixing white lead, zinc oxide and titanium pigment with highly refined soybean and linseed oils, and grinding to a fine consistency for brushing or spraying.

No. 90 Red Barn

No. 90 Soyoil Red Barn Paint is especially designed to give long lasting protection for barns, sheds and corn cribs. Of importance to farmers is the fact that it is mildew resistant and that good results and good coverage can be obtained when used on badly weathered surfaces. No. 90 Red Barn Paint can be successfully used on brick, concrete, metal or wood.

Livestock men from Farm Bureaus in eight Midwest states met recently in Chicago at request of IAA to discuss uniform regulations governing shipment of feeder cattle and control of T.B. and Bang's disease in feeder cattle. Seated at left of table are: S. M. Powell, Mich. Farm Bureau; C. F. Clark, Mich. Dep't of Agric.; F. G. Ketner, Chicago Producers; I. E. Parett, IAA; William Kasakaitas, Wis. FB; B. P. Pattison, Mich. FB. Seated at right side of table: H. S. Nicol, Iowa FB; C. K. Whistler, Indiana FB; W. W. Fuqua, Missouri FB; L. M. Larson and F. W. White, Minn. FB.

AUTHORITY GIVES OPINION ON BANG'S DISEASE CURES

ALLEGED cures for bovine brucellosis are being sold in Illinois despite statements by the University of Illinois and the U.S. Bureau of Animal Industry that no known cure has as yet come to their attention.

Following is a statement by the chief of the Bureau of Animal Industry, U.S. Department of Agriculture:

". . . . this subject (drug therapy of bovine brucellosis) has been intensively studied for the past several years by any number of competent investigators, without success. In addition to original work along these lines, a great many check tests have been carried out on alleged cures for the disease; none of which have proven out when subjected to properly controlled investigation.

"Bovine brucellosis is an unusual disease in many respects, and because of its peculiar manifestation, lends itself readily to misinterpretation of results when conclusions are drawn from clinical observations alone. The fact that the characteristic act of abortion observed in brucella-infested cattle usually occurs only once, even though the individual may remain infected, has probably accounted for most of the support that alleged cures for the disease have received in the past. It is so-called 'remedies' such as these that have confused a great many livestock people and have tended to hamper control efforts based upon scientifically sound methods."

The IAA department of veterinary medical relations concurs in the above opinion.

Holland Named Manager Of AFBF Insurance Co.

VERN E. HOLLAND, assistant manager of Country Mutual Fire Insurance Company, has been named manager of the new American Agricultural Insurance Company.

Vern Holland

Holland also has served as actuary of Country Fire, an IAA affiliate for the past seven years. The American Agricultural Insurance Company is sponsored by the American Farm Bureau Federation to provide reinsurance service for Farm Bureau insurance companies.

The new manager was reared in Iowa and graduated from the University of Iowa in 1925. He was actuary of the Great Western Insurance Company before going to Chicago to work with the First Trust Joint Stock Land Bank.

HEARING HELD ON ILLINOIS MILK MARKETING ORDER

A PUBLIC hearing to consider a federal milk marketing order for Rockford and Freeport was held June 2-9 in Rockford. It is expected that a federal milk marketing order will be issued as a result of the hearing to become effective sometime after December of this year.

The hearing was requested by the Mid-West Dairymen's Company and the Stephenson County Pure Milk Association, bargaining associations for dairymen in that area.

Under the proposed marketing program minimum prices to producers would be guaranteed at levels about the same as those prevailing in the Chicago market.

The effect of the order would be to establish classes of milk based upon its use. Prices would be based on these classes. A complete auditing program would be established to insure producers that their milk was paid for as directed by the order.

The hearing was conducted by Jack W. Bain, representing the U.S. Department of Agriculture. Other representatives from the USDA dairy branch included Dr. Paul L. Miller, Karl Degan, J. C. Kraus and Mary E. Poole.

The Illinois Milk Producers Association was represented by Judson P. Mason, association secretary and director of dairy marketing for the Illinois Agricultural Association.

The local milk bargaining associations were represented by Martin Burns of Chicago. The principle testimony was introduced by William H. Klahn, manager of the Rockford association, Robert E. Miller, manager of the Stephenson County Pure Milk Association, and Paul Bainbridge and Lowell Coomber, former presidents of the two milk producers groups.

Jud Mason, left, IAA director of dairy marketing, presents testimony in behalf of dairymen before Jack W. Bain, center, presiding officer, during federal milk order hearing in Rockford. Roy Long, right, vice-president of the Stephenson County Pure Milk Association, is seated in witness chair as court reporter, foreground, takes notes.

NEWS and VIEWS

This group of Michigan Farm Bureau delegates recently toured the Chicago office building of the Illinois Agricultural Association. Fourth from right is I. E. Parett, IAA.

For A Beautiful Lawn

Don't Clip Your Grass Too Short

MORE lawns are poor from too short mowing than from lack of plant food. Doesn't sound reasonable, does it? But it's true.

At Purdue hundreds of lawn soils are tested each year. We find generally that available phosphate and potash are high, nitrogen is adequate except perhaps during cool weather in the spring, and lime is seldom needed where hard water is used for watering.

This means that the grass is not starving for plant food. What then? The plant is actually starving for energy building nutrients. It cannot get enough energy from the sunlight to make enough sugars for proper growth. The leaves have been cut too short!

And well-fertilized grass starves even more as a result of too short cutting because it pushes its stems and leaves up faster, and is cut short more often than poorly fed grass.

There are other bad features to short mowing. Common broad-leaved lawn weeds as dandelions and plantain thrive where the lawn is short because their first leaves lie close to the ground and escape the mower.

When grasses on a well-fertilized soil are permitted to grow long these weeds find the going tough. They are crowded out to a large extent. The new weed killing chemicals do best under these conditions.

This doesn't mean that lawns should not be fertilized but plant food, topdressing and reseeding will not make a good lawn if the grass doesn't get enough energy to grow well.

Most of us mow short to keep the mower tracks from showing. The first effect is like a clean shave and haircut—it looks neat. But this can be deceptive. Those who try cutting lawns high haven't liked the beat down look and wheel tracks.

At first high-cut grass looks thin. But after a few high cuttings the mat thickens and wheel tracks go away in about a day.

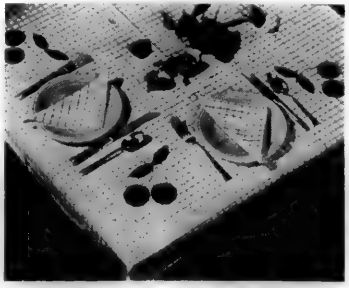
Good lawns also require adequate sunlight. Low tree branches are bad. Trim high if you want better grass, and plant shade grasses in such places. The fescue type grasses are better than blue grass for shaded spots.

Midsummer watering encourages crabgrass which in turn crowds out the better grasses and looks bad after the first frost. It also leaves a poor winter sod.

Bluegrass can live through severe droughts. An unwatered bluegrass lawn will look brown and dead in the heat and droughts of July and August but will spring to life again. If the lawn is not watered these critical months crabgrass will not take over.

The result of no watering in midsummer is often a better lawn in the fall and winter.

HAND DECORATION



Colorful tablecloths always add cheer to a meal. Here's one way of decorating checked fabric to make an attractively bright cloth at a small cost. Applique circles of scarlet cotton at each corner for cherries and finish with green appliqued leaves and embroidery. For free instructions send a stamped, self-addressed envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

Care In Buying Can Prolong Life of Hose

If you think your nylon hose are running away with you—developing too many snags and runs—the fault may be in buying.

Perhaps you're purchasing hose that weren't designed by the maker to suit your everyday needs, suggests Miss Edna R. Gray, clothing specialist, University of Illinois College of Agriculture. Sometimes women buy and wear the sheerest nylons for heavier duty than they can take, she says.

Sheerness in silk and nylon is indicated by the word denier. A 15-denier nylon is especially thin, best for dress up and evening wear. A 30-denier nylon is better suited to everyday wear.

Before buying new hose, check which length and denier has worn best for you, which brand has seemed most satisfactory, Miss Gray suggests. Then report your preference to your retailer.

for HOMEMAKERS

WASHABLE HAT

Crocheted hats have never been more fashionable nor more flattering. This summery style with its deep crown and pretty scalloped brim can be worn with dressy or tailored clothes. Make this becoming hat of white pearl cotton for easy laundering. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

INFANT SWEATERS

It's just a question of whether you knit or crochet in your choice between these two baby sweaters. The raglan sleeve cardigan at the top is knitted of baby blue yarn with herringbone pattern worked in white through the body of the sweater. Pink satin ribbon trims the neckline and forms bows and ties at the front. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

BEACH COAT

These are the days you've been dreaming about all winter — the sun-drenched days of relaxation. If the beach is your destination, make yourself one of these cotton coats in any of the colorful new plaids. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

MARION REPORTS 100 NEW MEMBERS JOIN

About 250 members and guests attended the annual meeting May 4 of the Marion County Home Bureau in Salem. Annual reports were made and new officers installed. More than 100 new members joined the organization during the past year, reports showed. Officers installed were: Mrs. Orville Schroeder, chairman; Mrs. H. J. Barksdale, vice-chairman; Mrs. G. C. Clifton, secretary; and Mrs. H. B. Saeger, treasurer.

HOLD HOUSING CLINICS

Three housing meetings were held recently in Clinton county by Home Bureau. About 450 women attended the three meetings.

Coles County Home Bureau sponsored a county-wide meeting on cancer several weeks ago.

QUICK APPLE STRUDEL

2 cups sifted enriched flour
3 teaspoons baking powder
½ teaspoon salt
2 tablespoons sugar
4 tablespoons shortening
2/3 to ¾ cup milk
3 cups chopped apple
½ cup sugar
1 teaspoon cinnamon
Confectioners' sugar
Chopped nuts

Sift together flour, baking powder, salt and sugar. Cut in the shortening and add milk to make a soft dough. Turn out on floured board and knead gently. Roll out one-fourth inch thick. Brush with melted butter, cover with chopped apple. Sprinkle sugar and cinnamon over apple. Roll jelly-roll fashion and form into a semi-circle on a greased baking sheet. Bake in moderately hot oven (425 degrees F.) 20-25 minutes. While warm frost with white frosting made by beating confectioners' sugar with a little hot water until smooth and flavor with vanilla extract. Sprinkle chopped nuts over frosting. Yield: 12 one-inch slices.

The Illinois Agricultural Association sponsored the attendance of the State Rural Youth Committee to the Midwest Training School for Farm Bureau leaders held a St. Paul, Minn., June 27-30.

MOVIE A 'MUST' FOR FARM BUYERS

One of the most popular films seen by Illinois farmers is the Farm Credit Administration's movie "What Is a Farm Worth?". About 15,000 persons have seen it so far. It is based on farm appraisal clinics and is practically a "must see" for anyone planning to buy a farm. The film can be booked through the FCA, St. Louis 3, Mo.

PIKE SPONSORS SURVEY

In cooperation with the county health nurse, Pike county recently sponsored a Chest X-ray Mobile Unit survey. During the survey, 3840 X-rays were taken and 162 were referred to their physicians for further study.

Livingston and La Salle County Home Bureaus recently held a frozen food clinic in cooperation with the Streator Foods Locker in the Streator Armory. Close to 600 women attended the two-day sessions.

Crocheted hats have never been more fashionable nor more flattering. This summery style with its deep crown and pretty scalloped brim can be worn with dressy or tailored clothes. Make this becoming hat of white pearl cotton for easy laundering. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

INFANT SWEATERS

It's just a question of whether you knit or crochet in your choice between these two baby sweaters. The raglan sleeve cardigan at the top is knitted of baby blue yarn with herringbone pattern worked in white through the body of the sweater. Pink satin ribbon trims the neckline and forms bows and ties at the front. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

BEACH COAT

These are the days you've been dreaming about all winter — the sun-drenched days of relaxation. If the beach is your destination, make yourself one of these cotton coats in any of the colorful new plaids. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

MARION REPORTS 100 NEW MEMBERS JOIN

About 250 members and guests attended the annual meeting May 4 of the Marion County Home Bureau in Salem. Annual reports were made and new officers installed. More than 100 new members joined the organization during the past year, reports showed. Officers installed were: Mrs. Orville Schroeder, chairman; Mrs. H. J. Barksdale, vice-chairman; Mrs. G. C. Clifton, secretary; and Mrs. H. B. Saeger, treasurer.

HOLD HOUSING CLINICS

Three housing meetings were held recently in Clinton county by Home Bureau. About 450 women attended the three meetings.

Coles County Home Bureau sponsored a county-wide meeting on cancer several weeks ago.

QUICK APPLE STRUDEL

2 cups sifted enriched flour
3 teaspoons baking powder
½ teaspoon salt
2 tablespoons sugar
4 tablespoons shortening
2/3 to ¾ cup milk
3 cups chopped apple
⅓ cup sugar
1 teaspoon cinnamon
Confectioners' sugar
Chopped nuts

Sift together flour, baking powder, salt and sugar. Cut in the shortening and add milk to make a soft dough. Turn out on floured board and knead gently. Roll out one-fourth inch thick. Brush with melted butter, cover with chopped apple. Sprinkle sugar and cinnamon over apple. Roll jelly-roll fashion and form into a semi-circle on a greased baking sheet. Bake in moderately hot oven (425 degrees F.) 20-25 minutes. While warm frost with white frosting made by beating confectioners' sugar with a little hot water until smooth and flavor with vanilla extract. Sprinkle chopped nuts over frosting. Yield 12 one-inch slices.

The Illinois Agricultural Association sponsored the attendance of the State Rural Youth Committee to the Midwest Training School for Farm Bureau leaders held a St. Paul, Minn., June 27-30.

MOVIE A 'MUST' FOR FARM BUYERS

One of the most popular films seen by Illinois farmers is the Farm Credit Administration's movie "What Is a Farm Worth?". About 15,000 persons have seen it so far. It is based on farm appraisal clinics and is practically a "must see" for anyone planning to buy a farm. The film can be booked through the FCA, St. Louis 3, Mo.

PIKE SPONSORS SURVEY

In cooperation with the county health nurse, Pike county recently sponsored a Chest X-ray Mobile Unit survey. During the survey, 3840 X-rays were taken and 162 were referred to their physicians for further study.

Livingston and La Salle County Home Bureaus recently held a frozen food clinic in cooperation with the Streator Foods Locker in the Streator Armory. Close to 600 women attended the two day sessions.

IAA Marketing From Combine to Consumer

(*Continued from page* 5)

the Fruit Exchange does not pool returns. Each grower's fruit retains its identity and is sold on its own merits. The best quality thus returns the highest price to the man who grew it. Growers packing poor quality year after year are discouraged from becoming members of the organization.

In 1935, a subsidiary organization, the Fruit Exchange Supply Company, was set up. It was designed as a purchasing cooperative to provide growers with needed orchard materials and kindred supplies.

The Fruit Exchange has added other services. A new modern cold storage building with 150,000 cubic feet of space was completed in 1947 and is in operation. Pre-cooling of peaches, and state-federal inspection of all packs are adopted practices. A new brand, the Prairie Chief, has been developed as a companion to the highly respected Illini Brand.

Over 700,000 bushels were sold through the Exchange in 1947. In its 27th year, it is a vigorous and a growing organization.

Dairy Marketing

About 60 per cent of the milk produced in Illinois is marketed through cooperatives. Chief purpose of these cooperatives is to strengthen and improve marketing conditions for dairy farmers.

This demands coordinated effort between cooperatives to meet changing conditions in the dairy industry. The function of the dairy marketing department is to assist producers in obtaining, developing, and correlating efficient and orderly outlets for milk and cream.

Recent developments make the problems of creameries and milk associations more nearly one problem than they have been before. Careful consideration is being given to means for strengthening these programs. Large metropolitan markets and some smaller cities are organized into bargaining associations. In other communities, milk producers bottle and distribute milk through Producers Dairies or Prairie Farms Creameries.

The Prairie Farms Creameries, an IAA affiliate, has 10 creameries in Illinois. These are located at Mt. Carroll, Moline, Mt. Sterling, Henry, Galesburg, Olney, Carlinville, Carbondale, Champaign and Bloomington. Producers Dairies are situated at Springfield, Danville, Peoria, Quincy and Jacksonville.

Producers who do not supply fluid milk markets, market their milk or cream cooperatively through processing plants operated by Prairie Farms Creameries, Producers Dairies and, in some instances, bargaining associations. Twenty-three associations and dairies are members of the Illinois Milk Producers Association, an IAA affiliate.

The state Prairie Farms Creamery Company is also a member of the Illinois Milk Producers Association, thus all are tied together for united effort, where producers interests lie in the same direction. Another affiliated association is the Illinois Milk Producers Supply Company. This is a purchasing company organized to obtain savings by combining the buying of all groups.

The widespread growth of improved roads has shifted from the sale of cream to whole milk. The grade A development and the use of paper containers in milk distribution are factors bringing about changes and new developments in the dairy industry and in the cooperative program.

BUS TRANSPORTATION MUST BE SAFE

(*Continued from page* 12)

the pupils are outlined in Circular 309, "Safe Transportation," and published by the office of state superintendent of public instruction. It is the guide to school bus transportation and is effective to the extent that its recommendations are applied. Administrators often have special meetings with the pupils at the beginning of the school year to discuss their responsibilities in connection with bus transportation and the necessity of conforming to the regulations, and to provide accident drills in methods of escape, use of fire extinguisher and other procedures.

Good school bus service depends on good roads, good equipment and good operating personnel. School boards are responsible for seeing to it that those essentials are provided. It is the responsibility of the school administrator to discuss with the bus drivers the standard of conduct which the community and the school expects to be maintained on the bus. It is the responsibility of the administrator to impress the drivers with the importance of checking the bus for loose lug bolts, low tires, weak brakes, etc., twice a day before hauling pupils. It is the duty of bus drivers to report needed bus repairs promptly.

In the Rural Youth men's division Bureau leads with 2420, Grundy is second with 2384, McDonough third with 2366. High individuals are: Wishell, Champaign, 561, and Whaley, McDonough, 559.

The DeKalb Rural Youth women's team is first with 1956 points, Randolph second with 1944 points, and Ogle third with 1906. High individuals: Kruse, Tazewell, 434; Walton, Randolph, 428; Claude, Kane, 426. High counties in Rural Youth mixed doubles are: Fayette, 945; Warren, 935; Ogle, 925.

BRISSENDEN ON LEAVE

O. D. Brissenden, IAA organization director, has taken a leave of absence because of ill health. He hopes to be back on the job in September. Meanwhile L. B. Hornbeck, organization man for western Illinois, will help out by spending a couple of days a week in the Chicago office.

$3,000,000 Says...

IT CAN HAPPEN TO YOU

Most farmers are fire-conscious. Most farmers observe basic fire prevention measures. Yet, statistics show that nearly three million dollars worth of farm property goes up in smoke every year. Fire doesn't always hit "the other fellow's" farm, nor does it strike only the careless. Don't take chances!

No matter how careful you are to guard against fire on your farm, when prevention fails you need the full protection of Country Mutual Fire Insurance. It costs so little to be safe — costs so much to say "It can't happen here."

Don't take a chance! See your Country Mutual Fire representative today. He can explain why Country Mutual Fire offers full fire protection to you as a Farm Bureau member at such low cost.

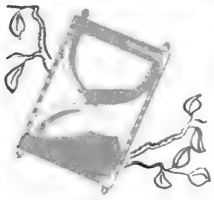
"TAKES TIME TO MAKE 'EM GROW"



Keep after them, Sonny. Keep after them till they sprout. That's the way it goes with most things in life . . . why your Dad can look forward to a bright future for YOU.

Why, right today 155,000 Farm Bureau Members all over the state of Illinois are planting ideas for your future that will grow right up with you. Seeing to it that fair prices will continue . . . be passed on to you and other Farm Bureau Members' sons. These men are BUILDING TOGETHER on a prosperous farm front.

There's extensive insurance coverage at lowest possible rates, cooperative marketing and purchasing plans, a trained staff of agricultural advisers at your Dad's service, and specialists who work for your interests on better legislation for farmers. You may not understand these things now, Sonny. But you will when the time comes for you to take over some day.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

—NOT BY BREAD ALONE!

By President Charles B. Shuman

IT WAS a blistering hot afternoon in late July when Tom drove into my barn lot with a car load of boys. He asked if it would be agreeable with me if they camped by the river for a few days. He was somewhat apologetic at leaving his farm work, but explained that the boys had worked hard and even if the neighbors talked he did not intend to go back on his promise of a camping trip "for the boys".

A few years later when one of "the boys" failed to return from a flight over Germany I paid silent tribute to Tom, the man who had taken time to live and play with his boys. How much better to be able to remember a few days of companionship with the boy who didn't come back than to have had a few more bushels of corn in the crib.

Modern mechanized farming has helped agriculture advance in efficiency very rapidly during recent years. The replacement of hand and horse labor by motor power has increased tremendously the efficiency of every farm operator and worker.

Despite the reduced size of the average farm family, the family type farm has increased in area. In other words, today's farmer, with fewer sons and hired men, is able to cultivate many more acres and do a better job than the farmer of 1920. Modern equipment and improved methods have multiplied the output per worker. This new efficiency has resulted in greatly increasing the income possibilities of every farm family.

However, "Man shall not live by bread alone!"

Too many farmers look upon their increased efficiency as a means to greatly expand operations so that they can make more and more money. Some have forgotten what we "live by".

New tools, more power, greater efficiency should mean more time to live, greater opportunities for recreation, shorter working hours, a shorter working week and earlier retirement. Let us use some of these gains in efficiency to provide more time for real living, more time for recreation and vacations, more time for religion and education. No family groups in America have a better opportunity to work and play and live together than do our farm families.

We live in the heart of nature's wonderland. Why not plan a vacation trip? Visit some of the historical areas and state parks recently pictured on the cover pages of the RECORD. Illinois is rich in historic as well as scenic spots. Take your youngsters on a fishing trip or bring the family down to the Illinois Farm Sports Festival at the University of Illinois, Aug. 26-27. You'll have a wonderful time.

Shall our machines work for us, or shall we become slaves of the machines?

You may lose More than a Partner without

PROTECTION

When you're sharing a business venture with someone else, usually the success of your business depends upon the judgment and skill of both principals involved. Therefore, it's a joint responsibility for BOTH of you to protect that partnership.

Should either you or your partner die, your mutual investment could mean a loss for the surviving principal without proper protection. One of Country Life's several "Business Policies" will act as a stand-by guarantee against your loss, or your partner's loss, if death dissolves your partnership.

Insure your continuation of good *business* by a friendly talk with your nearby Country Life representative. He can fully explain the ever-present risks in business ventures without proper protection.

TENNESSEANS WELCOMED. TO

DIXIE FARMERS MAKE THREE-DAY STUDY OF FARM BUREAU OPERATIONS HERE

"A FARMER would have to be crazy not to belong to Farm Bureau in Illinois," a Tennessee farmer said during the visit of 300 Tennessee Farm Bureau Federation leaders to Illinois in July.

Thoroughly impressed by the fine county Farm Bureau homes and the long list of services offered Farm Bureau members, the Tennessean leaped to his feet during a visit to Woodford county and asked: "How can an Illinois farmer afford not to belong?"

Another Tennessee visitor said jokingly: "When an Illinois farmer dies and goes to heaven, the first question St. Peter must ask him at the Golden Gate is 'Were you a Farm Bureau member?' "

Entering eastern Illinois after a two-day visit to the Indiana Farm Bureau, the 300 Tennesseans in eight separate bus tours, swept across central Illinois, then through the northern part of the state before meeting at the Illinois Agricultural Association offices in Chicago.

Each bus load visited three or four county Farm Bureaus on the way. At each county the visiting group was given an intensive explanation of the financial, organizational, and operational setup of the county Farm Bureau.

This included talks by the farm adviser, assistant farm adviser, home adviser, organization director, general agent, service company manager, and other employees such as locker manager, etc.

The Tennesseans were particularly interested in the IAA insurance companies because they were planning to set up their own automobile insurance company when they returned home.

Rolling past ripening oatfields and corn about chest high the Southerners repeatedly expressed wonder at the fertile flat lands which produced such bountiful crops. "A land of milk and honey," one man termed Illinois. Several asked why so many Illinois farm homes and buildings were in such poor condition in such a prosperous-looking land.

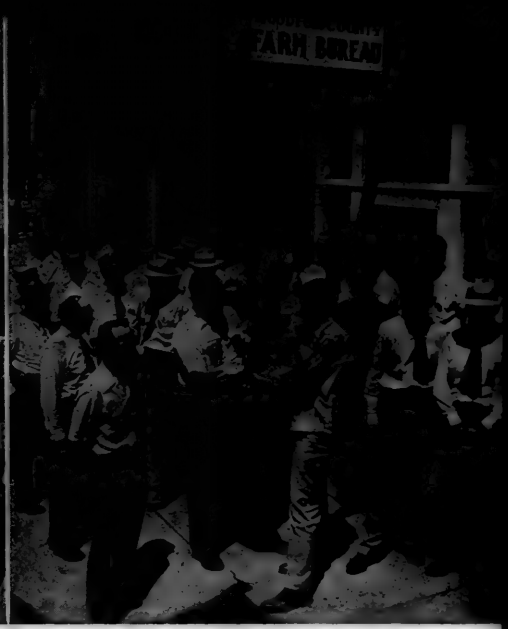
The tour ended in Chicago where the visitors inspected the IAA's 12-story office building.

A dinner in honor of the visitors was given by the IAA at the Stevens building in Chicago. President Charles B. Shuman of the IAA presided. During the after dinner session IAA division heads and company managers explained their organization programs.

Tennessee Farm Bureau Federation President Tom Hitch expressed the appreciation of his organization for the hospitality extended by the Illinois Agricultural Association. "It is a wonderful spirit of cooperation and fraternization," Hitch said, "when you Illinois farmers do your best to help us in this inspection trip through your state. It shows what farmers will do to help other farmers regardless of where they live."

In charge of the Illinois end of the Tennessee visit was Roy Johnson, IAA director of special services. Eight IAA staff men acted as guides on the buses during the tours.

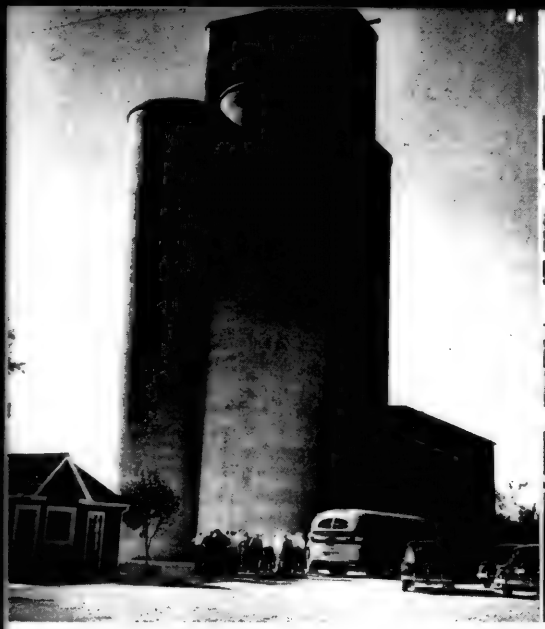
Counties visited included: Edgar, Douglas, Grundy; Champaign, Ford, Will; Macon, DeWitt, LaSalle; Vermilion, Iroquois, Kankakee; Piatt, Livingston, DeKalb; McLean, Kane; Woodford, Marshall-Putnam, Kendall; Peoria, Bureau, Lee.



D. TO ILLINOIS

"YOU'D HAVE TO BE CRAZY NOT TO BELONG TO FARM BUREAU IN ILLINOIS," VISITOR SAYS

1. From the side of their 19-ton bus the Tennessee Farm Bureau visitors look over Illinois' 160,000 bushel elevator at Hennepin; 2. Lester Leigh (left), Marshall-Putnam Farm Bureau president, answers questions from Tennesseans; 3. Looking over the service company warehouses at Henry; 4. Woodford President O.C. Tanton welcomes group at Eureka; 5. Woodford Farm Adviser T. H. Brock shows Southerners soils testing laboratory; 6. Ready to move on to the next Farm Bureau; 7. Tennessee Vice President Fonner Heathcock and President Tom Hitch (left) thank IAA President Charles B. Shuman and Vice President F. E. Morris (right) for Illinois' hospitality; 8. Tennesseans examine meat in locker company chill room at Yorkville; 9. Looking over Kendall county service company facilities; and 10. The visitors say goodbye before shoving off for the IAA offices in Chicago.



TENNESSEANS WELCOMED TO

DIXIE FARMERS MAKE THREE-DAY STUDY OF FARM BUREAU OPERATIONS HERE

"A FARMER would have to be crazy not to belong to Farm Bureau in Illinois," a Tennessee farmer said during the visit of 300 Tennessee Farm Bureau Federation leaders to Illinois in July.

Thoroughly impressed by the fine county Farm Bureau homes and the long list of services offered Farm Bureau members, the Tennessean leaped to his feet during a visit to Woodford county and asked: "How can an Illinois farmer afford not to belong?"

Rolling past ripening oatfields and corn about chest high the Southerners repeatedly expressed wonder at the fertile flat lands which produced such bountiful crops. "A land of milk and honey," one man termed Illinois. Several asked why so many Illinois farm homes and buildings were in such poor condition in such a prosperous-looking land.

The tour ended in Chicago where the visitors inspected the IAA's 12-story office building.

A dinner in honor of the visitors was given by the IAA at the Stevens building in Chicago. President Charles B. Shuman of the IAA presided. During the after dinner session IAA division heads and company managers explained their organization programs.

Tennessee Farm Bureau Federation President Tom Hitch expressed the appreciation of his organization for the hospitality extended by the Illinois Agricultural Association. "It is a wonderful spirit of cooperation and fraternization," Hitch said, "when you Illinois farmers do your best to help us in this inspection trip through your state. It shows what farmers will do to help other farmers regardless of where they live."

In charge of the Illinois end of the Tennessee visit was Roy Johnson, IAA director of special services. Eight IAA staff men acted as guides on the buses during the tours.

Counties visited included: Edgar, Douglas, Grundy; Champaign, Ford, Will; Macon, DeWitt, LaSalle; Vermilion, Iroquois, Kankakee; Piatt, Livingston, DeKalb; McLean, Kane; Woodford, Marshall-Putnam, Kendall; Peoria, Bureau, Lee.

"YO
TO

D TO ILLINOIS

"YOU'D HAVE TO BE CRAZY NOT TO BELONG TO FARM BUREAU IN ILLINOIS," VISITOR SAYS

1. From the side of their 19-ton bus the Tennessee Farm Bureau visitors look over Illinois' 160,000 bushel elevator at Hennepin; 2. Lester Leigh (left), Marshall-Putnam Farm Bureau president, answers questions from Tennesseans; 3. Looking over the service company warehouses at Henry; 4. Woodford President G.C. Tanton welcomes group at Eureka; 5. Woodford Farm Adviser T. H. Brock shows Southerners soils testing laboratory; 6. Ready to move on to the next Farm Bureau; 7. Tennessee Vice President Fenner Heathcock and President Tom Hitch (left) thank IAA President Charles B. Shuman and Vice President F. E. Morris (right) for Illinois' hospitality; 8. Tennesseans examine meat in locker company chill room at Yorkville; 9. Looking over Kendall county service company facilities; and 10. The visitors say goodbye before shoving off for the IAA offices in Chicago.

HENNEPIN ELEVATOR IS READY FOR BUSINESS

160,000 BUSHEL CAPACITY STRUCTURE IS PRIDE OF PRAIRIE GRAIN COMPANY

THE ILLINOIS Agricultural Association's terminal grain marketing program took a long stride nearer its goal recently with the completion of the 160,000 bushel elevator at Hennepin. The new elevator started taking grain in July.

The Hennepin elevator is one of three river houses planned by the Prairie Grain Company, a nine-county Farm Bureau grain marketing organization affiliated with the IAA's Illinois Grain Terminals Inc. A second elevator is now under construction at Lacon, and a third is to be built in the Ottawa area whenever a suitable site is obtained.

Dedication of the elevator recently marked the first annual meeting of the Prairie Grain Company at which county Farm Bureau and IAA leaders urged support for this farmer-owned and controlled enterprise.

Carl O. Johnson, Marshall-Putnam, secretary-treasurer of Prairie Grain Company and chairman of the building committee, estimated that the elevator, including land and river dredging would cost close to $200,000. It will be able to load and unload 9,000 bushels of grain per hour.

Tracing the history of Prairie Grain, Johnson said the organization held its first meeting three years ago in Ottawa to consider requests by farmers and cooperative elevators for an arrangement to provide for the shipment of grain by river barge. Other meetings followed and it was decided to incorporate with the following nine counties as the territory to be served by Prairie Grain: Lee, La Salle, Henry, Marshall-Putnam, Bureau, Stark, Peoria, and Woodford.

This is the new grain elevator at Hennepin.

Other counties along the Illinois and Mississipppi rivers are or will be served by their own respective organizations also affiliated with Illinois Grain Terminals. The IAA parent organization is promoting the construction of these elevators along the rivers between Chicago and St. Louis. Large terminal elevators will be built in both these cities for the terminal marketing of the grain collected in the river elevators such as the one at Hennepin.

President H. T. Marshall, La Salle, said the elevator was located at Hennepin because of its strategic bridgehead position and because most interest was shown there. In the area served by Prairie Grain, the 10-year average shows that farmers market 53 million bushels of cash grain a year.

Speaking at the dedication of the elevator, IAA Director Russell V. McKee, Marshall-Putnam, said: "This elevator is a step in farm progress. It is an indication that our organizations are growing up. We may not enjoy all the fruits of our work, but we can help those who follow. We are building for the next generation."

Principal Speaker George E. Metzger, IAA secretary of organization and information, complimented Prairie Grain leaders for their hard work and devotion to the cause of farmer-owned terminal grain operations.

"I question the value of this fine structure," Metzger said referring to the elevator, "unless it can raise the standard of living back on the farms around here. That is the objective of organized agriculture. That must be the objective of the elevator. It can be done with your support."

L. L. Colvis, IAA secretary of marketing, told the assembled crowd: "A grain elevator takes more than sand, gravel, cement, and steel; it requires courage, imagination, and determination. It is with courage, imagination, and determination that Illinois farmers are planning to go further along the road of grain and other commodity marketing."

George H. Iftner, acting director of Illinois Grain Terminals Inc. said: "The statewide program will soon go into gear. Then will come the test. We can move far out ahead with the support of 80 to 90 per cent of the farmers. We're in the grain business. Let's stay in it."

Members of the Prairie Grain Company board of directors who served during the past year are left to right, front row: Wesley J. Attig, Lee county; H. S. Lampe, Woodford; Albert Hayes, vice president, Peoria; E. R. Kuntz, Peoria; C. E. Studley, Bureau; H. E. Myers, Henry; and R. H. Jackson, Stark. On platform are Carl O. Johnson, secretary-treasurer, Marshall-Putnam; and H. T. Marshall, president, La Salle. Attig retired and was replaced by Glen Pfouts, Lee. All others were reelected for the ensuing year.

Picture at left shows the cypress gardens at Winter Haven, Fla. At right are glass-bottomed boats at Silver Springs, Ocala, Fla. These places will be visited on the southern trip sponsored by the IAA.

Farmers Sign Up for CONVENTION TRIPS

Roy P. Johnson — **RESERVATION REQUEST**
Illinois Agricultural Association
43 E. Ohio Street, Chicago 11, Ill.

Dear Sir:

Here's my request for reservations on the IAA special train. Please make train reservations for the following number of persons: ..... These train reservations are for the following route: (Check route desired) (a) Eastern trip on Pennsylvania Railroad ..... (b) Southern trip on Illinois Central Railroad .....

I want my reservation for the following type of Pullman car: (Check type desired) (a) Intermediate Pullman car: ..... (b) Standard Pullman car: ..... (Standard Pullman cars are newer and more expensive but both types of cars provide the same travel comforts).

I wish the following type of berth:

(a) Lower for one .....
(b) Upper for one .....
(c) Lower for two .....
(d) Compartment for two .....
(e) Compartment for three .....
(f) Drawing room for two .....
(g) Drawing room for three .....
(h) Drawing room for four .....
(i) Coach seat .....

I also wish to reserve hotel reservations while at Atlantic City for the following number of persons: ..... Following are the names and addresses of members of my party:

Name: ..... Address: .....
Name: ..... Address: .....
Name: ..... Address: .....

.....
(my name)

.....
(my address)

"JUST what we've been waiting for—a vacation trip to the convention." This is the message we've been receiving from folks who sent in their requests for a berth on the IAA caravan trains the day they read the good news in last month's RECORD.

As you know, two special trains will carry Illinois Farm Bureau members to the annual convention of the American Farm Bureau Federation which will be held in December in Atlantic City.

The first request for the southern train trip came to the IAA office from Mr. and Mrs. Mark Williams of Dixon, Lee county, and for the eastern trip from Mr. and Mrs. W. F. Gomel and Mr. and Mrs. Carl Kepp of Annawan, Henry county.

More than 70 requests were sent in during the first week. So if you want to go east this fall, make your reservations early by completing and sending in the reservation request on this page.

Any questions you have relating to the trip and convention, including train ticket and hotel reservations during the AFBF annual meeting, should be addressed to Roy Johnson, Illinois Agricultural Association, 43 E. Ohio Street, Chicago 11, Ill.

The southern tour will leave on the Illinois Central Railroad Dec. 5 and will arrive at Atlantic City Dec. 13. It will leave after the convention Dec. 16, arriving in Chicago the next day.

The eastern caravan will leave Chicago Dec. 8 on the Pennsylvania Railroad, arriving at Atlantic City Dec. 13. It will leave Dec. 16, returning to Chicago by way of New York City. Both trains will stop at Washington, D. C.

The railroads are planning a number of side trips and these are included in the costs of the train fares. A feature of the eastern trip will be a tour of Beltsville, the United States Department of Agriculture Experimental Farm. On the southern tour, a special side trip will include a ride in a glass bottom boat at Silver Springs, Florida.

The southern trip, the longest of the two, will cost about $220 and the eastern tour about $175. Both figures include the cost of the railroad ticket, most meals en route, tips, and special sightseeing junkets.

For help in filling out the reservation request see the July RECORD, where a complete schedule of train fares is shown, listing the prices and availability of various berths.

ELEVATOR

See You At the Festival!

THIS is the month of the ninth annual Illinois Farm Sports Festival. Aug. 26-27 are the dates. So now is the time to make your final plans to attend this great rural music and sports pageant.

On hand to greet and entertain you on the campus of the University of Illinois at Champaign-Urbana during the thrill packed two-day event will be a galaxy of popular radio stars, orchestras for the big swing and barn dance jamborees, the Illinois Rural Chorus with 300 mixed voices, plus 4,500 rural athletes competing in softball, track, trap shooting, bowling and more than 50 music, dance, and sports events.

It will be bigger and better than ever this year. Many softball, bowling, and folk festival events have grown so large that district elimination contests have been necessary. These district winners, already selected to represent their counties, will make competition tougher than ever.

An old favorite in radio entertainment —the WLS Dinner Bell hour—will be back again to broadcast from festival headquarters Thursday and Friday noon. It will include interviews with persons taking part in sports and folk festival events. Radio talent from the National Barn Dance will appear also during the general evening and afternoon programs.

The Illinois State Rural Chorus, under the direction of R. G. Haley, will provide one of the big entertainment thrills of the festival. Composed of 300 voices drawn from county choruses, this group will travel to the festival from the Illinois State Fair and will then go by special train to Canada on a singing tour.

The festival will start on Thursday morning at 9 o'clock when the softball and other teams pair off for two days of grueling elimination contests.

The sport with the greatest number of teams entered is again softball, a game that has skyrocketed in popularity throughout rural Illinois in recent years. At the referee's command to "play ball" 150 or more softball teams will start blazing away on University diamonds.

Softball will be played by groups of all ages—from 4-H'ers to men over 35—and the hotly contested games will draw big crowds.

Roy Johnson, secretary of the festival and IAA director of special services, estimates that at least 600 Farm Bureau softball teams have been entered in leagues this summer. Of this number, 217 survived for the district contests and approximately 150 won the right to go to the state festival for a try at a state championship.

Bowling, also caught in a tidal wave of popularity among farm men and women, will be heavily represented at the festival. More that 300 survivors from district meetings will compete for state crowns. The district bowling contests were held throughout Illinois early this summer in May and June and attracted an estimated 1,200 keglers.

The colorful trap and skeet shoot which last year drew more than 3,000 fans and followers at the state festival was held early this year on Aug. 6 to avoid a conflicting date with the All-American Trap Shoot. Many Illinois farmers who enter the shoot at the Sports Festival have won recognition nationally as marksmen. Jim Holderman, chairman of the festival trap shoot and Farm Bureau president in Grundy county, is a former winner of the All-American Trap Shoot.

Survivors of district folk contests will also be on hand at the state festival to defend their skills. They represent the best of rural talent from the 61 counties that entered music, drama, and dance events in 12 district meetings at Libertyville, Mendota, Effingham, Galesburg, Champaign, Oregon, Yorkville, Carlinville, Eureka, Elgin, Carbondale, and Woodstock.

Other events at the state meeting will include: archery, golf, baseball, softball, bowling, checkers, hog calling, horseshoes, swimming, track, clock golf, knot tying, shuffleboard, barber shop quartet singing, novelty bands, and folk and square dancing.

On Thursday evening there will be a "three-ring" circus of music, dancing, and entertainment. A square dance jamboree will be held on the third floor of Huff gym for those who like the old time dances and a swing dance on the main floor of Huff gym for those who like modern dancing. For those who would rather look on, a general program, drawing on the music and dance talent from the folk festival, will be held at the university auditorium.

The climax of the two-day event will be the staging of several final contests, such as woodchopping and hog-calling, at the Stadium Friday afternoon, the awarding of ribbons and trophies to winners, the parade of sport and festival stars, and the selection of a Sports Festival queen.

At this Friday afternoon program, a championship trophy will be awarded the winning county. A second will also be awarded the county highest in sports events and a third trophy to the county highest in folk events.

In addition to these awards, the county with the greatest number of points in each of the 16 districts will be given a district championship trophy.

No Break in Price Level Expected in Twelve Months

Farmers need not worry about a break in the general price level during the next 12 months.

There may be some changes and adjustments in individual prices, but the general level should remain high. This analysis is based upon a report made by L. J. Norton, agricultural economist at the University of Illinois College of Agriculture.

Norton gives three major reasons for expecting general farm prices to remain high. First, there's a huge volume of construction and capital investment. Second, this country probably will continue to export more than it imports. And, third, there is no real move to reduce federal spending—but taxes have been reduced.

If there is a good corn crop this year, corn prices may move down the scale because of the reduction in livestock numbers. Increased exports of corn and other feed grains, however, may help to offset this reduction in price.

DO YOU LIVE ON A FREEWAY?

By CHARLES S. MAYFIELD, Director
IAA Department of Road Improvement

DO YOU live near a freeway or does your farm adjoin a freeway? Freeways, or limited access roads, are the latest development in Illinois high-speed highways. Route No. 66, which runs from Chicago through Springfield to St. Louis, is perhaps the best known in the state. Farmers should know some of the facts about this type of road.

The Freeway Act authorizing these roads was passed by the Illinois legislature in 1943. During this period of the war, the federal government urged the states to pass legislation authorizing limited access highways. These highways or freeways speeded the transportation of war supplies. At the time the Illinois law was passed, the Illinois Agricultural Association wrote several protective measures for farmers and land owners into the act.

Any law of this kind allowing for a new road naturally affects many farmers because right-of-way has to be acquired. However, in the case of freeways, not only has it been necessary to take farm lands for right-of-way, but also the farmer's access to the road is prescribed by law.

The main provisions of the act follow:

1. **Freeway Defined.** A freeway is a public highway or street especially designed for through traffic and to, from or over which no persons have rights or easements, of access, crossing, light, air or view.

2. **Establishment of Freeways.** The Department of Public Works and Buildings, the county board of any county, or the corporate authorities of any city, village or incorporated town may be the freeway "authority". When the safety and convenience of highway traffic will be promoted in the public interest, the freeway authority has the power to make a freeway of any highway under its jurisdiction.

3. **Access by Abutting Owners.** When an existing highway has been made a freeway, no owner or person having an interest in abutting land, that is, land bordering on the road, may construct a new means of access to the highway except upon written consent of the authority governing the freeway. The freeway authority has full power to deny or to specify and enforce the terms and conditions under which new means of access may be given. The freeway authority is also authorized to acquire private property and property rights in connection with these highways.

4. **Acquisition of Land.** When a proposed highway is designated as a freeway, the freeway authority has the right to purchase or condemn all property rights necessary for the construction and maintenance of the highway. This includes any rights or easements of access and crossing vested in the property not taken as part of the highway, but which is abutting.

5. **Severing of Tract.** Whenever property held under one ownership is cut across by a freeway, the freeway authority may grant a limited or restricted easement permitting crossing of the freeway at a designated location, under specific terms and conditions, to be used only to cross the road from one tract to the other. If the owner of these two tracts should sell one of them, the freeway authority may revoke the right to cross.

6. **Local Service Drives.** When traffic conditions justify, the freeway authority may construct drives adjacent to the highway or designate existing streets or

Front Cover

FIFTEENTH in our series of picturesque and historic Illinois scenes is the covered bridge a few miles north of Princeton in Bureau county. Many covered bridges were built about the time of the Civil War. This is one of the few remaining in Illinois.

This bridge was built in 1863 at a total cost of $3,148.57. The supporting timbers are heavy oak beams. It is said that the roofs were built over the bridges in the old days to protect the flooring and supporting timbers from the weather.

In 1938, the Bureau County Historical Society placed a bronze plaque on the bridge which says in part: "For three-quarters of a century this bridge, defying storms and floods, has carried the traveler across Bureau Creek. It well represents the unyielding character of those who erected it. In tribute to the building committee and to the other citizens of Bureau county who, with foresight and faith planned and builded well, this memorial tablet is today dedicated."

WHAT Is This New Bang's Disease Vaccine?

FOR MORE than a quarter of a century Dr. I. F. Huddleson, Michigan State College veterinarian and bacteriologist, has been tracking down a preventive for brucellosis (Bang's disease) in cattle. Today he believes he is near his goal.

Five years ago he started work on a new vaccine. Dr. Huddleson calls it "M" vaccine. It is produced from a mucoid growth phase of the brucellosis germ.

It is this vaccine that may control brucellosis in cattle which alone costs Illinois farmers about $8 million annually.

With the guarded caution of a scientist, Dr. Huddleson says he thinks the "M" vaccine "has some promise judging from experiments thus far." Associates say he would stop its experimental use immediately if he detected any serious shortcomings.

Huddleson refused to make any predictions on its widespread use. "We don't know definitely just what it can do until we have had more time to consider the results of wider experimentation."

Use of vaccine M at present is limited mainly to dairy herds in the state of Michigan and is considered only in the experimental stage. Several states are conducting their own experiments with M vaccine in Maryland, Virginia, West Virginia, Pennsylvania, Tennessee, and Ohio under permit of the U. S. Bureau of Animal Industry.

The vaccine now in general use for the prevention of brucellosis in cattle is called "Strain 19." The search for a better vaccine has continued because Strain 19 has several objectionable features. Criticisms made are: 1. An animal vaccinated against brucellosis gives a positive reaction in its blood test which is the same as though it had the disease; 2. It does not give lifetime immunity; 3. It can cause the disease (undulant fever) in man; and 4. Some farmers and veterinarians suspect that the vaccine itself can cause the disease in the animal vaccinated.

The first objection is overcome by the fact that an animal vaccinated with M vaccine does not give a positive or diseased blood test reaction after 90 days or less as a result of the vaccination.

The other objections to Strain 19 vaccine listed above have not been raised against M vaccine as a result of experiments to date.

M vaccine is now being used in more than 1,800 herds in Michigan under the direction of the state veterinarian, Dr. C. F. Clark. In 1947, 5,399 animals were vaccinated with M vaccine in Michigan, according to Dr. Clark. During the first six months of 1948 more than 20,000 animals were vaccinated. About half that many were vaccinated with Strain 19 in the first six months of 1948.

Dr. Huddleson made it clear that M vaccine, like other vaccines, is a preventive and has little if any curative value once the disease has taken hold.

Use of the M vaccine during the past three years on cattle in private herds has limited the spread of the disease to four per cent of the susceptible animals.

The great value of the new vaccine is seen in the possibility of preventing the spread of the disease in animals of recently infected herds. By doing so, it will become possible to eliminate infected animals, immunize the remainder, and not only have a disease-free herd but one which is highly resistant to brucellosis.

Michigan dairymen and veterinarians are pleased with the results of the new vaccine and are more outspoken in their enthusiasm than Dr. Huddleson, the discover.

Dr. E. F. Sterner, Ionia, Mich., veterinarian, who has vaccinated more than 1000 head of cattle with M vaccine, said the new vaccine has "superior merit because you get good results from the vaccination of older animals. Immunization," he continued, "seems to last longer and appears to be more effective judging from our limited experience."

G. E. Peterson, an Ionia dairyman who was born in Livingston county, Illinois, maintains a herd of 40-50 Holsteins all of which have been M vaccinated for brucellosis. Peterson said that before he vaccinated, he was removing a diseased animal a month from his herd.

"I'm sold on this new vaccine," Peterson said. "Since I've used it I have had no infection in my herd."

Dr. Sterner added that "occasionally you may find a herd where it doesn't work 100 percent. But even if it didn't work 100 percent, it is too good to pass up."

Dairyman Erford Hecht said he had three infected animals and two suspects in his herd of 15 before vaccinating. On a later test the three infected animals re-

FREEWAY?

By CHARLES S. MAYFIELD, Director
IAA Department of Road Improvement

DO YOU live near a freeway or does your farm adjoin a freeway? Freeways, or limited access roads, are the latest development in Illinois high-speed highways. Route No. 66, which runs from Chicago through Springfield to St. Louis, is perhaps the best known in the state. Farmers should know some of the facts about this type of road.

The Freeway Act authorizing these roads was passed by the Illinois legislature in 1943. During this period of the war, the federal government urged the states to pass legislation authorizing limited access highways. These highways or freeways speeded the transportation of war supplies. At the time the Illinois law was passed, the Illinois Agricultural Association wrote several protective measures for farmers and land owners into the act.

Any law of this kind allowing for a new road naturally affects many farmers because right-of-way has to be acquired. However, in the case of freeways, not only has it been necessary to take farm lands for right-of-way, but also the farmer's access to the road is prescribed by law.

The main provisions of the act follow:

1. **Freeway Defined.** A freeway is a public highway or street especially designed for through traffic and to, from or over which no persons have rights or easements, of access, crossing, light, air or view.

2. **Establishment of Freeways.** The Department of Public Works and Buildings, the county board of any county, or the corporate authorities of any city, village or incorporated town may be the freeway "authority". When the safety and convenience of highway traffic will be promoted in the public interest, the freeway authority has the power to make a freeway of any highway under its jurisdiction.

3. **Access by Abutting Owners.** When an existing highway has been made a freeway, no owner or person having an interest in abutting land, that is, land bordering on the road, may construct a new means of access to the highway except upon written consent of the authority governing the freeway. The freeway authority has full power to deny or to specify and enforce the terms and conditions under which new means of access may be given. The freeway authority is also authorized to acquire private property and property rights in connection with these highways.

4. **Acquisition of Land.** When a proposed highway is designated as a freeway, the freeway authority has the right to purchase or condemn all property rights necessary for the construction and maintenance of the highway. This includes any rights or easements of access and crossing vested in the property not taken as part of the highway, but which is abutting.

5. **Severing of Tract.** Whenever property held under one ownership is cut across by a freeway, the freeway authority may grant a limited or restricted easement permitting crossing of the freeway at a designated location, under specific terms and conditions, to be used only to cross the road from one tract to the other. If the owner of these two tracts should sell one of them, the freeway authority may revoke the right to cross.

6. **Local Service Drives.** When traffic conditions justify, the freeway authority may construct drives adjacent to the highway or designate existing streets or

FIFTEENTH in our series of picturesque and historic Illinois scenes is the covered bridge a few miles north of Princeton in Bureau county. Many covered bridges were built about the time of the Civil War. This is one of the few remaining in Illinois.

This bridge was built in 1863 at a total cost of $3,148.57. The supporting timbers are heavy oak beams. It is said that the roofs were built over the bridges in the old days to protect the flooring and supporting timbers from the weather.

In 1938, the Bureau County Historical Society placed a bronze plaque on the bridge which says in part: "For three-quarters of a century this bridge, defying storms and floods, has carried the traveler across Bureau Creek. It well represents the unyielding character of those who erected it. In tribute to the building committee and to the other citizens of Bureau county who, with foresight and faith planned and builded well, this memorial tablet is today dedicated."

Is This New Bang's Disease Vaccine?

FOR MORE than a quarter of a century Dr. I. F. Huddleson, Michigan State College veterinarian and bacteriologist, has been tracking down a preventive for brucellosis (Bang's disease) in cattle. Today he believes he is near his goal.

Five years ago he started work on a new vaccine. Dr. Huddleson calls it "M" vaccine. It is produced from a mucoid growth phase of the brucellosis germ.

It is this vaccine that may control brucellosis in cattle which alone costs Illinois farmers about $8 million annually.

With the guarded caution of a scientist, Dr. Huddleson says he thinks the "M" vaccine "has some promise judging from experiments thus far." Associates say he would stop its experimental use immediately if he detected any serious shortcomings.

Huddleson refused to make any predictions on its widespread use. "We don't know definitely just what it can do until we have had more time to consider the results of wider experimentation."

Use of vaccine M at present is limited mainly to dairy herds in the state of Michigan and is considered only in the experimental stage. Several states are conducting their own experiments with M vaccine in Maryland, Virginia, West Virginia, Pennsylvania, Tennessee, and Ohio under permit of the U. S. Bureau of Animal Industry.

The vaccine now in general use for the prevention of brucellosis in cattle is called "Strain 19." The search for a better vaccine has continued because Strain 19 has several objectionable features. Criticisms made are: 1. An animal vaccinated against brucellosis gives a positive reaction in its blood test which is the same as though it had the disease; 2. It does not give lifetime immunity; 3. It can cause the disease (undulant fever) in man; and 4. Some farmers and veterinarians suspect that the vaccine itself can cause the disease in the animal vaccinated.

The first objection is overcome by the fact that an animal vaccinated with M vaccine does not give a positive or diseased blood test reaction after 90 days or less as a result of the vaccination.

The other objections to Strain 19 vaccine listed above have not been raised against M vaccine as a result of experiments to date.

M vaccine is now being used in more than 1,800 herds in Michigan under the direction of the state veterinarian, Dr. C. F. Clark. In 1947, 5,399 animals were vaccinated with M vaccine in Michigan, according to Dr. Clark. During the first six months of 1948 more than 20,000 animals were vaccinated. About half that many were vaccinated with Strain 19 in the first six months of 1948.

Dr. Huddleson made it clear that M vaccine, like other vaccines, is a preventive and has little if any curative value once the disease has taken hold.

Use of the M vaccine during the past three years on cattle in private herds has limited the spread of the disease to four per cent of the susceptible animals.

The great value of the new vaccine is seen in the possibility of preventing the spread of the disease in animals of recently infected herds. By doing so, it will become possible to eliminate infected animals, immunize the remainder, and not only have a disease-free herd but one which is highly resistant to brucellosis.

Michigan dairymen and veterinarians are pleased with the results of the new vaccine and are more outspoken in their enthusiasm than Dr. Huddleson, the discover.

Dr. E. F. Sterner, Ionia, Mich., veterinarian, who has vaccinated more than 1000 head of cattle with M vaccine, said the new vaccine has "superior merit because you get good results from the vaccination of older animals. Immunization," he continued, "seems to last longer and appears to be more effective judging from our limited experience."

G. E. Peterson, an Ionia dairyman who was born in Livingston county, Illinois, maintains a herd of 40-50 Holsteins all of which have been M vaccinated for brucellosis. Peterson said that before he vaccinated, he was removing a diseased animal a month from his herd.

"I'm sold on this new vaccine," Peterson said. "Since I've used it I have had no infection in my herd."

Dr. Sterner added that "occasionally you may find a herd where it doesn't work 100 percent. But even if it didn't work 100 percent, it is too good to pass up."

Dairyman Erford Hecht said he had three infected animals and two suspects in his herd of 15 before vaccinating. On a later test the three infected animals re-

DAIRY DAY AT OLNEY

By LEW REISNER

Field Editor, IAA RECORD

THE girls in southeastern Illinois are winsome and beautiful—prettiest in the state—because they drink lots of rich, wholesome milk produced by excellent southern Illinois dairy cows. If you think otherwise, you'll get an argument from the folks who saw proof during Dairy Day held recently at Olney, county seat of Richland.

The 36 girls on parade as candidates for Dairy Queen upheld the region's claim as the home of beautiful women. They proved the value of milk as a food because, as candidates for Dairy Queen, they were bona fide users of milk. And the excellence of southern Illinois dairy cows was upheld by the fine display of cattle entered in the Jersey parish show held as a part of the celebrations.

Dairy Day in Olney was one of many similar celebrations throughout the nation commemorating June as dairy month. It was sponsored by the Prairie Farms Creamery at Olney with the help of the local Chamber of Commerce. The queen, Marilyn Lee Morgan, Lawrenceville, became eligible to enter one of three district contests where a contestant will be picked for dairy queen of the Illinois State Fair.

A number of fine dairy cattle were exhibited at the Jersey parish show. These parish shows, which give local breeders a chance to compare and show their animals, are becoming increasingly popular. No cash prizes are awarded. One of the big attractions was the magnificant herd sire owned by J. C. Piper and sons. This bull, Pompous Dreaming Standard, considered almost perfect in type, was 1946 All-American grand champion.

Grundy Youth Wins Chicago Lamb Show

Sherwood Nelson, an 18 year old farm boy from Morris, Grundy county, Ill., won top honors at the Chicago Junior Market Lamb Show and sale at the Chicago Stock Yard today when his Southdown Hampshire lamb was named Grand Champion of the show.

His 90 pound lamb was later sold at auction for $1.75 per pound, establishing a new record price for lambs at the Chicago Show. A total of 53 exhibitors from 4-H and Vocational Agricultural clubs of Illinois and Indiana exhibited 321 lambs at the show.

The top three winners out of each of the classes were sold at auction in the afternoon. The 57 head sold weighed an average of 79 pounds and yielded an average price of 41½c per pound. This tops last year's average of 38½c and is an all time record in the 10-year-history of this event.

Lambs which did not place in the first three spots sold on the open market for a reported average of 32c a pound or 3 cents over the extreme top of the day's open market price for lambs in Chicago.

The first prize pens of three lambs and five lambs were shown by Laurence McLachlan, of Earlville, LaSalle county, Ill.

A 12-year old farm girl figured prominently in this year's winnings. She was Wanda Mae Thorndyke of Saunemin, Livingston county, Ill., who won fourth in pen of three, and fifth in both pens of five and the individual lamb class.

Pure Milk Ass'n Redeeming 1941 Plant Certificates

Pure Milk Association, large Chicago area dairy co-op, is redeeming its 1941 plant certificates totaling $41,000. Issued in $5, $10, $15, and $20 denominations, these certificates were issued in 1941 to aid in a plant expansion program.

Members and former members should mail the Certificates of Investments, series 1941, to the office of Pure Milk Association, 608 S. Dearborn St., Chicago 5, Ill.

Think Before You Sell Your Sows

If you're planning to get rid of your old brood sows—maybe you'd better reconsider. With fewer hogs and more corn in prospect for next winter, Illinois hog producers will be in a more favorable position to make a profit than they have been during the past year.

L. F. Stice, extension economist in marketing with the University of Illinois College of Agriculture, says that markets and weather have united to make the possibility of fewer hogs and more corn a good probability.

He suggests this four-point program for Illinois hog producers: keep your brood sows; delay the time of marketing for late spring pigs and those farrowed this summer by keeping them on legume pasture and feeding a minimum amount of grain until new corn is available; take good care of sows bred for fall pigs—and raise a maximum number of pigs per litter; plan to maintain or increase moderately the number of sows to farrow 1949 spring pigs.

School Bus Standards MUST BE KEPT HIGH

By JOHN K. COX, Director
IAA Rural School Relations

WITHOUT doubt Illinois standards for pupil bus transportation are very high, and rightly so. One result of these high standards is that there has been only one fatality in Illinois from 1940 to 1948 while transporting pupils to and from school. Figures are not readily available on the number of casualties among children walking along country roads or for the many students who ride to school in private cars.

Illinois transportation costs per pupil were close to $50 during the 1946-1947 term and higher this year.

The Ohio state average per capita cost for transportation for the 1946-47 school year was $24 per pupil. The average operation cost per bus mile was 18 cents. This was based on 6,000 school buses transporting 314,341 pupils. The buses traveled a distance of approximately 240,000 miles per day. Two-thirds of the buses are owned by boards of education and there is very little objection to transporting grade and high school pupils in the same bus, says the supervisor of transportation for the Ohio State Department of Education.

Indiana reports a per capita cost for pupil transportation for 1946-1947 of $33.13. Their buses are usually owned by the operator. However, some of the school corporations do own the buses; some, the bodies only. The fact that, in general, the districts do not own the buses in Indiana may account for part of the difference in per capita costs as compared to Ohio.

They said no objections had been received by the state office to transporting grade and high school pupils together and added that although the state recommended a maximum of 45 minutes on the bus, there were no limits on the length of time a person might remain on the bus.

Also they added the significant statement, "Some of our corporations are too small to operate economically at present. The movement is still on to consolidate whenever it may prove educationally and economically sound."

The main reason Illinois' per capita transportation costs have been so high is that heretofore we have hauled mainly high school students or in some cases have had dual transportation systems. Under the increasingly popular 12-grade unit, by hauling grade and high school pupils together, we should be able to cut our per capita transportation costs to $35 and perhaps to $30. If so, with the state paying $20 per pupil, the local district would be obligated for only $10 to $15 per pupil per year for transportation costs.

Since grade school pupils will not be transported as far as the high school

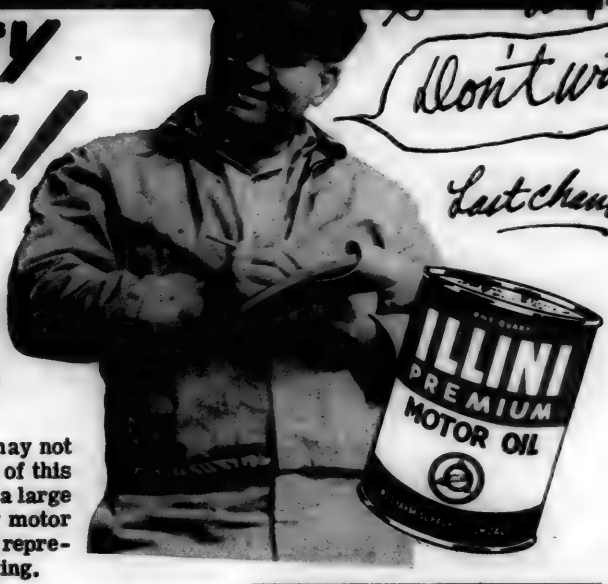
MOTOR OIL SALE

SAVE MONEY Buy NOW!



Don't wait

Last chance

What a buy!

Production costs in the oil industry are increasing. Some retail prices have already been raised to offset these higher costs. You can still order Illini or Penn Bond motor oil at no increase in price!

Hurry-

This is for Sure!

Present prices may not last--avail yourself of this opportunity to purchase a large quantity of top quality motor oil at prices that today represent a substantial saving.

ILLINI PREMIUM MOTOR OIL

Illini Premium Motor Oil is our most popular oil. It makes up 60% of our total Motor Oil Sales to farmers. Illini is a new motor oil with five outstanding features of superiority: (1) Keeps a clean motor clean longer; (2) Provides a better piston seal; (3) Non-corrosive to bearing metals; (4) Holds resinous varnish formation to minimum; (5) Assured longer life for piston rings and cylinder walls.

PENN BOND MOTOR OIL

A 100% pure Pennsylvania paraffin base motor oil known as a "regular type of oil". It's an old standby preferred by many farmers.

Self unloading wagon dumps chopped hay into silo blower.

At DeKalb grassland field day farmers: 1. Watch grass come from rolls of new hay machine, pressed for quicker drying. 2. See hay harvester pick up, chop, and blow hay into self unloading wagon. 3. Show interest in new seeder which handles brome grass seed well. 4. Look over orchard plow useful for pasture renovation and popular in far west. 5. Observe operation of new one-man baler which makes a round bale.

NEW WAYS TO HARVEST GRASS

HAY MAKING is the only big job on the farm that has changed little since the Civil War. For most of the nation's farmers it is still the same hot, hard, and dusty work it was 80 years ago. Only recently have new ideas arisen to challenge the old.

At the grassland field day held this summer in DeKalb county farmers had a look at new ways to make hay. They saw how hay can be cut in the morning and stored in the mow in the afternoon without loss of leaves or color—and without once being handled by hand.

This is done by using a hay roller in combination with a field chopper which cuts and blows the cured hay into self-unloading wagons. The new hay roller—still very expensive—field dries hay twice as fast by cracking the coarser stems. This prevents sap from flowing into the leaves.

The men at the field demonstration took to the field choppers like a bee to honey. Many said they hoped to buy one soon. "It takes the back work out of haying," they said. And for that reason they believe it will win out over hay balers.

Grass silage? "It has a real future in Illinois," farmers believe. The hay cut during the field demonstration went into a large silo. Grass silage makes a high protein feed and fits well into conservation farming. Farm Adviser W. C. Mummert, DeKalb county, estimates 200 farmers are trying it in his county this summer.

Why grow grasses at all? DeKalb county has fertile soil, good for corn and grain farming. Why? Because no soil can stand the drain of constant cropping. One of the speakers said: "You can earn more with a five year rotation (corn, corn, oats, meadow, meadow) than from your grain alone. Your hay will be extra."

The grassland field day was sponsored by the DeKalb county soil conservation district with the help of the DeKalb County Farm Bureau, the local radio station, machinery dealers, and others. Pasture improvement and field spraying demonstrations were held in the morning and hay handling methods in the afternoon.

Report Result of State FLY-FREE Campaign

"NO MORE trouble with flies since we've sprayed with DDT" is the report from thousands of farmers who are cooperating in the state-wide campaign to make Illinois fly-free this summer.

"At least six out of every 10 farmers in our county are spraying this year" is the estimate of 40 farm advisers in counties conducting a fly-free campaign.

"Just aren't as many flies around as there used to be," urbanites and farmers alike are saying. Success of the drives is widespread. Town and cities in many communities have sprayed or have made plans to do so.

The campaign to make Illinois free from flies this summer is being sponsored by the Illinois Agricultural Association, the Illinois Natural History Survey, the University of Illinois College of Agriculture, and the State Department of Public Health.

A survey on what is happening in the counties has been made by the RECORD. Here are some of the remarks by farm advisers and results of county campaigns.

A. R. Kemp, farm adviser Knox county: "Many report no flies either in barns or on cattle. Galesburg was sprayed with an airplane. Also the city dump. Four or five other towns in the county have done some spraying."

W. H. Brown, Greene county: "All towns and cities conducted good clean up campaigns. Drug stores, filling stations, grocery and hardware stores, elevators, and others, have been selling large quantities of DDT."

F. M. Smith, Clinton county: "Everyone remarks about the lack of flies. The city and country around Clinton seem almost free. Our small cities are spraying garbage cans twice a month, and dumps and behind restaurants and grocery stores more often."

T. W. May, Madison county: "We made a survey and found that at least three-fourths of the farmers in the county are taking part in the state-wide fly control program. A few who sprayed last year haven't had to spray the inside of buildings because of the carry-over effects. However, they expect to spray soon."

G. E. Lampe, Clay county: "Several have said their beef cattle were much more contented since they were sprayed and that their tails were just extra baggage."

E. J. Barnes, Richland county: "One town reports their business houses are not using screens on doors and windows. Watch out for the hucksters peddling DDT, the miracle insecticide, at a terrific price. We have a report of one who sold a pound of DDT and a small house sprayer for more than $7."

L. W. Chalcraft, Menard: "Most farm people have sprayed thoroughly. One restaurant owner in Petersburg leaves his screen doors wide open. Roy Pike, two miles east of Petersburg, says his cattle now lie in the shade without a fly bothering."

W. F. Coolidge, Livingston: "Our service company has handled 10 times as much DDT as last year. Many dairymen report milk production has held up due to the spraying campaign."

M. P. Roske, Carroll: "We put on a demonstration meeting in each township, using a high pressure outfit, in a concentrated effort to get buildings sprayed. I would estimate from 85 to 90 per cent are using DDT on livestock."

W. H. Tammeus, McHenry: "Woodstock sprayed the entire town last year and are going to spray again this year. Two years ago there were six cases of polio and last year none. Mayor Johnson is proud of Woodstock's accomplishments. I can't find a farmer who doesn't spray cows, walls and fences."

Farm Adviser J. B. Turner (left), Fayette county, sent in this picture to help convince the doubtful that the town of Farina was completely sprayed with DDT for fly control. Man operating sprayer is Glen Ernst, who took on the job and charged $60 for the materials and 2½ hours work. Center is George Reitz of the Farina city council, who lined up the routing of the sprayer.

Predict All-Time Record Corn Crop

AN ALL-TIME record corn crop of 3,328,862,000 bushels was predicted in the July estimate by the U. S. Department of Agriculture. This is 39 per cent greater than last year's crop and two per cent higher than the nation's record 1946 crop.

The USDA also predicted an estimated 1,241,751,000 bushel wheat crop, the second largest in history.

YOU ARE ELIGIBLE FOR FARM HOME CONTEST

Farmers and homemakers in 50 southern Illinois counties are eligible to compete in the 1948 farm and home improvement contest sponsored by the University of Illinois in cooperation with the St. Louis Chamber of Commerce.

It is open to farm families in all the counties south of and including Adams, Schuyler, Cass, Menard, Sangamon, Christian, Shelby, Cumberland, and Clark.

Entries must be made with county farm or home advisers by July 1. Three winners will be selected in each county at the end of the year. In each case the husband and wife will receive an expense-paid overnight trip to St. Louis.

Progress during the current year will count approximately 60 per cent and previous improvements 40 per cent. Records must be completed by Dec. 31.

Observe operation of new one-man baler which makes a round bale.

NEW WAYS TO HARVEST GRASS

HAY MAKING is the only big job on the farm that has changed little since the Civil War. For most of the nation's farmers it is still the same hot, hard, and dusty work it was 80 years ago. Only recently have new ideas arisen to challenge the old.

At the grassland field day held this summer in DeKalb county farmers had a look at new ways to make hay. They saw how hay can be cut in the morning and stored in the mow in the afternoon without loss of leaves or color—and without once being handled by hand.

This is done by using a hay roller in combination with a field chopper which cuts and blows the cured hay into self-unloading wagons. The new hay roller—still very expensive—field dries hay twice as fast by cracking the coarser stems. This prevents sap from flowing into the leaves.

The men at the field demonstration took to the field choppers like a bee to honey. Many said they hoped to buy one soon. "It takes the back work out of haying," they said. And for that reason they believe it will win out over hay balers.

Grass silage? "It has a real future in Illinois," farmers believe. The hay cut during the field demonstration went into a large silo. Grass silage makes a high protein feed and fits well into conservation farming. Farm Adviser W. C. Mummert, DeKalb county, estimates 200 farmers are trying it in his county this summer.

Why grow grasses at all? DeKalb county has fertile soil, good for corn and grain farming. Why? Because no soil can stand the drain of constant cropping. One of the speakers said: "You can earn more with a five year rotation (corn, corn, oats, meadow, meadow) than from your grain alone. Your hay will be extra."

The grassland field day was sponsored by the DeKalb county soil conservation district with the help of the DeKalb County Farm Bureau, the local radio station, machinery dealers, and others. Pasture improvement and field spraying demonstrations were held in the morning and hay handling methods in the afternoon.

Report Result of State
FLY-FREE Campaign

"NO MORE trouble with flies since we've sprayed with DDT" is the report from thousands of farmers who are cooperating in the state-wide campaign to make Illinois fly-free this summer.

"At least six out of every 10 farmers in our county are spraying this year" is the estimate of 40 farm advisers in counties conducting a fly-free campaign.

"Just aren't as many flies around as there used to be," urbanites and farmers alike are saying. Success of the drives is widespread. Town and cities in many communities have sprayed or have made plans to do so.

The campaign to make Illinois free from flies this summer is being sponsored by the Illinois Agricultural Association, the Illinois Natural History Survey, the University of Illinois College of Agriculture, and the State Department of Public Health.

A survey on what is happening in the counties has been made by the RECORD. Here are some of the remarks by farm advisers and results of county campaigns.

A. R. Kemp, farm adviser Knox county: "Many report no flies either in barns or on cattle. Galesburg was sprayed with an airplane. Also the city dump. Four or five other towns in the county have done some spraying."

W. H. Brown, Greene county: "All towns and cities conducted good clean up campaigns. Drug stores, filling stations, grocery and hardware stores, elevators, and others, have been selling large quantities of DDT."

F. M. Smith, Clinton county: "Everyone remarks about the lack of flies. The city and country around Clinton seem almost free. Our small cities are spraying garbage cans twice a month, and dumps and behind restaurants and grocery stores more often."

T. W. May, Madison county: "We made a survey and found that at least three-fourths of the farmers in the county are taking part in the state-wide fly control program. A few who sprayed last year haven't had to spray the inside of buildings because of the carry-over effects. However, they expect to spray soon."

G. E. Lampe, Clay county: "Several have said their beef cattle were much more contented since they were sprayed and that their tails were just extra baggage."

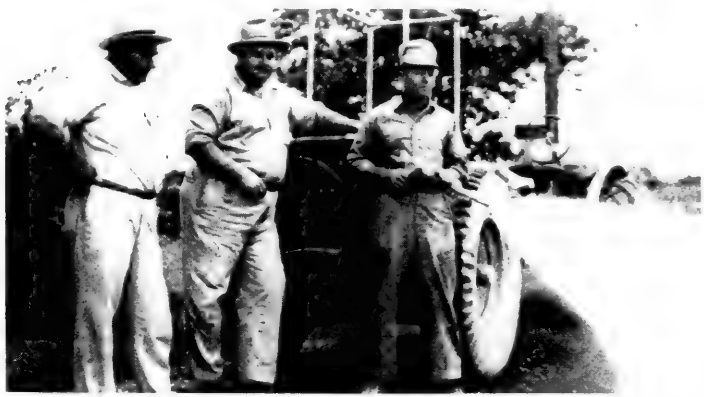
E. J. Barnes, Richland county: "One town reports their business houses are not using screens on doors and windows. Watch out for the hucksters peddling DDT, the miracle insecticide, at a terrific price. We have a report of one who sold a pound of DDT and a small house sprayer for more than $7."

L. W. Chalcraft, Menard: "Most farm people have sprayed thoroughly. One restaurant owner in Petersburg leaves his screen doors wide open. Roy Pike, two miles east of Petersburg, says his cattle now lie in the shade without a fly bothering."

W. F. Coolidge, Livingston: "Our service company has handled 10 times as much DDT as last year. Many dairymen report milk production has held up due to the spraying campaign."

M. P. Roske, Carroll: "We put on a demonstration meeting in each township, using a high pressure outfit, in a concentrated effort to get buildings sprayed. I would estimate from 85 to 90 per cent are using DDT on livestock."

W. H. Tammeus, McHenry: "Woodstock sprayed the entire town last year and are going to spray again this year. Two years ago there were six cases of polio and last year none. Mayor Johnson is proud of Woodstock's accomplishments. I can't find a farmer who doesn't spray cows, walls and fences."



Farm Adviser J. B. Turner (left), Fayette county, sent in this picture to help convince the doubtful that the town of Farina was completely sprayed with DDT for fly control. Man operating sprayer is Glen Ernst, who took on the job and charged $60 for the materials and 2½ hours work. Center is George Reitz of the Farina city council, who lined up the routing of the sprayer.

Predict All-Time Record Corn Crop

AN ALL-TIME record corn crop of 3,328,862,000 bushels was predicted in the July estimate by the U. S. Department of Agriculture. This is 39 per cent greater than last year's crop and two per cent higher than the nation's record 1946 crop.

The USDA also predicted an estimated 1,241,751,000 bushel wheat crop, the second largest in history.

YOU ARE ELIGIBLE FOR FARM HOME CONTEST

Farmers and homemakers in 50 southern Illinois counties are eligible to compete in the 1948 farm and home improvement contest sponsored by the University of Illinois in cooperation with the St. Louis Chamber of Commerce.

It is open to farm families in all the counties south of and including Adams, Schuyler, Cass, Menard, Sangamon, Christian, Shelby, Cumberland, and Clark.

Entries must be made with county farm or home advisers by July 1. Three winners will be selected in each county at the end of the year. In each case the husband and wife will receive an expense-paid overnight trip to St. Louis.

Progress during the current year will count approximately 60 per cent and previous improvements 40 per cent. Records must be completed by Dec. 31.

FIGHT FOR LONG RANGE FARM

BILL TOLD AT ST. PAUL MEETING

THE DRAMATIC story of how the Farm Bureau secured passage of a long-range farm program in the closing hours of the 80th Congress highlighted the sessions of the Midwest Farm Bureau Training School late in June at St. Paul.

A farm audience of more than 1000 local, county and state Farm Bureau leaders heard the story first hand from those who directed the fight in Washington.

The men who told of Farm Bureau's part in securing passage of the bill were Allan Kline, president of the American Farm Bureau Federation, and Roger Fleming, director of the AFBF Washington office, who came to the meeting direct from the nation's capitol.

Three other major addresses were given by spokesmen from the Illinois Agricultural Association. President Charles B. Shuman discussed the commodity program of the American Farm Bureau Federation. George E. Metzger, IAA field secretary, spoke on personnel problems in Farm Bureau work. O. D. Brissenden, IAA organization director, talked on the issues in selling Farm Bureau.

Most Washington observers had made up their mind that there would be no long range bill passed during this season, Kline and Fleming said.

But a small senate group, headed by Senator George D. Aiken of Vermont was determined to fight a long range farm program through this session. This group in the senate, according to Fleming, included Senators Thye of Minnesota, Young of North Dakota, Ellender of Louisiana, and Lucas of Illinois.

Fleming related how these men pushed their fight into the closing hours of the 80th Congress. At 4 A.M. Sunday, June 20, the new bill passed both houses. A weary Congress adjourned two hours later.

During their fight for the farm bill the senate group had the solid backing of Farm Bureau forces. Fleming quoted Senator Aiken as saying, "If it hadn't been for support from the American Farm Bureau Federation, we couldn't have put this price support program over."

Senator Aiken said that from start to finish the Farm Bureau carried a major part of the fight for a long-range farm bill, and he expressed his deep appreciation.

Kline expressed his gratitude for the support given by county and state Farm Bureaus. "We needed the help we received from back home," Kline said. "We could not have won without it."

County Farm Bureau leaders in Illinois, many of whom were at the St. Paul conference, supported the bill by contrating their congressmen and senators, urging them to pass the Aiken bill.

The long range bill provides for an extension of present price supports until Dec. 31, 1949, after which time the new permanent program will go into effect.

The permanent program revises parity on a current 10-year moving average basis rather than present parity which is based on the years 1909-14.

For basic crops, supports are placed on a sliding scale, based on supply, ranging from 60 to 90 per cent of parity. When the supply of certain basic farm commodities, including corn and wheat, is normal, the price will be supported at 75 per cent of parity.

But when the supply is above or below normal, the support level will slide up and down accordingly. As an example, when the supply drops to 70 per cent of normal, the support will be 90 per cent of parity. When supply rises to 30 per cent above normal, the support will be 60 per cent of parity.

This means that farmers will receive more nearly the same income whether the crop is large or small.

Left. Varn Vaniman, midwest organization director, during mid-west Farm Bureau training school in St. Paul points to Illinois as the largest state Farm Bureau organization. Illinois organization directors, left to right, are: F. W Tieken, Ford; G. W. Burroughs, Vermilion; G. W. Blanchard, Christian; and Orville Johnston, Montgomery. Right. Clyde Stackhouse, right center, bursts into hearty laugh, joined by wife, right, and Mr. and Mrs. H. M. Johnston, left, farmers, all from Henry county, during breakfast at midwest training school.

Tillman To Retire After 29 Years In St. Clair Co.

B. W. TILLMAN, farm adviser in St. Clair county for 29 years, has announced he will retire in September.

Tillman is the only farm adviser to serve St. Clair county. He was hired soon after the Farm Bureau was organized there in June of 1919.

All of the cooperative organizations in St. Clair county were started originally through Tillman's efforts. He is one of Illinois' most valued and respected farm advisers.

For Your School Buses:

, LOWER COSTS

ALTY INSURANCE

COUNTRY MUTUAL CASUALTY COMPANY offers to the school buses that carry farm children the same complete insurance protection that you've carried on your own cars and trucks, at the same substantial saving: Full insurance coverage . . . liability PROTECTION, property damage PROTECTION, and medical PROTECTION in the event of accident.

School buses have always been a FIRST in driving safety. Let's keep them that way by taking every conceivable precaution . . . by keeping them FULLY INSURED through your own company — the Country Mutual Casualty Company.

Ask your local Country Mutual Casualty representative for more information on school bus insurance. He'll be glad to give your school board the facts on GREATER SAFETY at LOWER COST.

Farm Youth Learn To Swim at own 4-H Camp

AT Camp Shaw-waw-nas-see located along the Kankakee river north of Kankakee farm boys and girls are learning the pleasures of vacationing at a forest camp.

Under the guidance of farm and home advisers, and others, these young campers learn to enjoy swimming and woodcrafts during their three-day stay at the 4-H camp.

Camp leaders have wisely drawn upon the Indian lore that surrounds Camp Shaw-waw-nas-see, once an Indian camp site, to instill an out-of-door spirit to their camp. The young campers are divided into tribes when they arrive and the tribes are given names of the great Illini family: Kaskaskia, Michigamie, Peoria, or Tamaroa.

These musical Indian names, a camp set in beautiful hardwood and evergreen trees, sleeping in tents along a river with a booming waterfall, all make a deep impression on the young farm boys and girls, many of whom are spending their first night away from home.

More than all the other pleasures, the farm kids seem to like the water most, and many learn to swim during their visit to the camp. Chuck Yale, Lee County farm adviser and president of the camp, estimates that 250 youngsters will be taught to swim there this summer.

Top. Members of 4-H clubs in northern Illinois agree swimming hole at Camp Shaw-waw-nas-see near Kankakee is most popular spot during hot summer days while softball, bottom, is most enjoyable game.

Tent serves as dining hall at 4-H memorial camp on Allerton estate near Monticello. Camp was dedicated and opened in July.

Here is a typical day at Shaw-waw-nas-see. Campers are awakened at 6:30 in time for a morning dip before the flag-raising ceremony. After breakfast and tent inspection, they join their tribes for lessons on nature lore, fun for 4-H'ers, handicraft, and swimming.

In the afternoon, they are offered a choice of such studies as photography, tumbling, music, or first aid. Later they again divide into tribes for swimming and sports.

Supper is followed by a flag-lowering ceremony, vespers, folk dancing, and a presentation of the Indian history of Camp Shaw-waw-nas-see. At 10 o'clock lights are turned out.

Camp Shaw-waw-nas-see is one of four summer camps being built as a part of a state-wide 4-H camp training program. The state program is being developed as a living memorial to 4-H members who lost their lives in World War II. When all four are completed, a camp will be within reasonable distance of every 4-H member in Illinois.

A second 4-H camp, built on the 250-acre site given by Robert Allerton, opened to campers this summer. It is located in east central Illinois near Monticello in Piatt County.

Another camp will be built on a 100-acre site on West Frankfort City Lake in Franklin county and will serve 28 counties in southern Illinois. A fourth camp is to be built at Jacksonville for western Illinois.

PICK FIRST STUDENTS TO RECEIVE MEDICAL LOANS

JOSEPH DAY, 26, Hamburg; Burton E. Bagby, 35, Mounds; and L. C. Fiene, 21, Sparta, have been chosen to receive student loan funds to finish their medical educations. The loan fund is sponsored jointly by the Illinois Agricultural Association and the Illinois Medical Society.

Under provisions of the loan fund, those selected must promise to practice at least five years after their internship in a community of 5000 or less. Applicants for the loans must have finished their pre-medical work with good grades and have the endorsement of their county Farm Bureau and local medical society.

A fourth pre-medical student is to be selected for the loan funds because other applications received failed to meet requirements. Those wishing further information should write to I. E. Parett, Secretary of General Services, Illinois Agricultural Association, 43 East Ohio, Chicago 11, Ill.

Day is a veteran and a native of Calhoun county where he plans to return to practice. He attended St. Louis University and plans to enter the University of Illinois medical school in the fall.

Bagby is married and the father of three children. He plans to return to Pulaski county to practice. He is a veteran and has been accepted to enroll as a student at Loyola medical school in Chicago. He received his pre-medical work at Memphis State College.

L. C. Fiene comes from Randolph county but will return to Washington county to practice. He has been a student at Southern Illinois University and plans to enter the University of Illinois medical school in the fall.

RURAL YOUTH

By ELLSWORTH D. LYON, Director
Young People's Activities

At AFBF Meeting

FOURTEEN Illinois young people attended the youth section of the Midwest meeting of the American Farm Bureau Federation held in St. Paul, Minn., June 27 to 30. Illinois Rural Youth members ably carried the responsibility of recreation on Sunday evening following committee meetings, the vesper service, and the reception.

They did the job so well that the committee responsible for Monday night's recreation asked them to "take over" for the second night. Illinois Rural Youthers accepted and then in turn asked the various states represented to provide part of the youth leadership.

Activities of the youth section were of the training school type. Rural Youth delegates tried to find out why both extension service and Farm Bureau are interested in farm youth. They found there is a close working relationship between these two sponsoring agencies. Both are interested in developing leadership, in furthering activities for individual and group development, and in assisting youth to find the employment suited to their talents.

Farm Bureau, using facts provided by extension is ready and able to train youth for leadership in specific programs to develop leaders in agriculture. Some of these programs are talk fests, action programs in safety, educational short courses in the study of cooperatives, program building along lines dealing with rural life, and tours to study problems, experiments, and successes of farm people.

Following a general presentation of the problems of farm youth which bring both extension and Farm Bureau into the picture, there followed small group discussions by the young people upon those phases of most interest to them. Some of the pictures on this page show Illinois Rural Youthers taking part in the small group discussions.

At Sports Festival

Rural Youth has swelled the ranks of participants and spectators at the annual Illinois Farm Sports Festival during past years. This month more Rural Youth members than ever before will engage in the various activities of this biggest athletic event for farm people sponsored in the state of Illinois.

On Aug. 26 and 27, the various teams and individuals throughout Illinois who have been working for team organization, physical development, and places of honor, and have been given the high rating in county and district sports festivals will converge upon the U. of I. campus at Urbana to engage in strong and heated competition. Participants going to Urbana should make a careful check to see that entries are in order. It is better to be sure now than sorry later. So check with your county sports festival leader and make sure that all entries and plans have been properly made.

Mr. and Mrs. Orville Johnson (Dorothy Lange) are members of the Rural Young Married group of Montgomery county. Orville was a member of Rural Youth in Macoupin and Dorothy a member in Montgomery where they now live and where he is organization director. They were in attendance at the Midwest meeting in St. Paul when this picture was taken.

In County Activities

"Clay County Rural Youth did a lot of talking about their approaching June meeting and now that it is over they are still talking. We thought you might be interested in the reason why," writes Doris Baity, new youth assistant for Clay. "Gurnam Singh, large landowner of Punjab, India, spoke to nearly 150 Rural Youth members and their guests on 'Agricultural Conditions in India.' Singh, who wears the traditional turban of the Sikh religion, graduated this month from the College of Agriculture at the University of Illinois. He discussed with us the problems of mechanizing Indian farming, and dispelled some of the conjured ideas Americans have about India.

"The Rural Youthers' Hobo Band, or The Clay County Country Slickers, made their first appearance, and no doubt was left in the minds of the audience about the talents of this newly organized 'assembly of noise.'"

Christian's August meeting will be an "all out" hayride Aug. 19, starting at Dale Bauer's home. Extra events in educational and recreational features have been planned. Twenty-two new members were added to this group in a recent membership drive in which 17 different townships were represented.

Stephenson is now marking its tenth year by preparing a ten-year anniversary book.

Rural Youthers of Wabash are cooperating with the program and slogan of Farm Bureau in a "Fly Free State in '48." Jane Jackman, secretary, says this group recently saw the movie "Rid the Farm of Flies." It was of much interest to all present.

Kane not only served a good banquet on June 24, but also featured C. V. Amenoff, editor *Elburn Herald*, in a discussion of doughnut dunking. "C. V." did more than dunk properly. He gave an impressive talk on world peace and the necessity of broadening our approach of other peoples.

North Cook marked the end of its second year with a big banquet in Wheeling. President Marvin Anderson and his committees had well planned features throughout the evening program.

Illinois Rural Youth are shown above taking a leading part in group discussions held by Rural Youth from throughout the Midwest at the AFBF Midwest Training School at St. Paul in June. Left: Edna Dew, Ogle county, (second from right) speaks her mind. Center: Harold Holt (left), Michigan; and Mae Pitstick, La Salle county. Right: Rex Emery (left), McDonough county; Marion Smith (center), Indiana; and Betty Barr, La Salle county.

Farm Youth Learn To Swim at own 4-H Camp

AT Camp Shaw-waw-nas-see located along the Kankakee river north of Kankakee farm boys and girls are learning the pleasures of vacationing at a forest camp.

Under the guidance of farm and home advisers, and others, these young campers learn to enjoy swimming and woodcrafts during their three-day stay at the 4-H camp.

Christian's August meeting will be an "all out" hayride Aug. 19, starting at Dale Baker's home. Extra events in educational and recreational features have been planned. Twenty-two new members were added to this group in a recent membership drive in which 17 different townships were represented.

Stephenson is now marking its tenth year by preparing a ten-year anniversary book.

Rural Youthers of Wabash are cooperating with the program and slogan of Farm Bureau in a "Fly Free State in '48." Jane Jackman, secretary, says this group recently saw the movie "Rid the Farm of Flies." It was of much interest to all present.

Kane not only served a good banquet on June 24, but also featured C. V. Amenoff, editor *Elburn Herald*, in a discussion of doughnut dunking. "C. V." did more than dunk properly. He gave an impressive talk on world peace and the necessity of broadening our approach of other peoples.

North Cook marked the end of its second year with a big banquet in Wheeling. President Marvin Anderson and his committees had well planned features throughout the evening program.

Illinois Rural Youth are shown above taking a leading part in group discussions held by Rural Youth from throughout the Midwest at the AFBF Midwest Training School at St. Paul in June. Left: Edna Dew, Ogle county, (second from right) speaks her mind. Center: Harold Holt (left), Michigan; and Mae Pitstick, La Salle county. Right: Rex Emory (left), McDonough county; Marion Smith (center), Indiana; and Betty Barr, La Salle county.

Do You Live On a Freeway?

(*Continued from page* 10)

service drives for access. These drives must be of appropriate design and construction and separated from the freeway by parkways, curbs, or other effective devices. In all cases the freeway authority determines the need, location, and nature of the local service drive.

7. **Elimination of Highway Crossings.** The freeway authority may eliminate a crossing or junction by agreement with the existing county, township, city, or village having jurisdiction over the access road in question. The crossing may be relocated elsewhere for safety and convenience.

8. **Intersections or Crossings.** The freeway authority must give its consent or fix the terms and conditions under which new intersections or crossings are connected to the freeway.

So if you live on property lying along a freeway, be sure you know what your own particular rights are in relation to the road. Besides, if you ever sell your property, the buyer probably will want to know what restrictions the freeway puts on your property rights.

What Is This New Bang's Vaccine?

(*Continued from page* 11)

mained. They were sold. The two suspects cleared up and the herd is now brucellosis-free. Hecht said he was glad the vaccine had been made available to his herd.

"What," you may ask, "are the prospects of obtaining vaccine M for use on your herds in Illinois?" The disappointing answer is "Not for some time." Dr. Huddleson refused to give any definite time when the vaccine would be available commercially outside Michigan. He indicated that months of experiment may yet be necessary before the Bureau of Animal Industry will approve the vaccine.

In the meantime, all Illinois farmers can do is watch the results of experiments on M vaccine and hope they will be successful enough to put the new vaccine on the market as soon as possible.

School Bus Standards Must Be Kept High

(*Continued from page* 14)

pupils and will arrive at school earlier than high school pupils on the average, it may be necessary to shorten the high school day in order to prevent the grade school day from being too long. It may be desirable to shorten the noon lunch hour at the high school or to eliminate it entirely by staggering the noon hour for the purpose of shortening the grade school day.

It is rather generally agreed among those who have had experience in pupil transportation that the school district's ownership of its own buses increases the service to the district and allows the school board more regulatory control over the transportation system.

Good roads, good schools buses and good drivers are essential to a good pupil transportation system, but most of all "good drivers". For no school bus is safer than the driver who operates it. And he must deserve sufficient respect from the pupils to secure their cooperation.

For further information of "Do's" and "Don't's" in pupil transportation, read the article on page 17 to 19 of the March, 1948 issue of the *Educational Press Bulletin* entitled "Pupil Transportation Notes" by J. C. Mutch, director of transportation, office of State Superintendent of Public Instruction, Centennial Building, Springfield. Copies of this bulletin probably can be secured by writing to the above address.

In order to continue Illinois' good safety record in school bus transportation, parents and board members should insist that all measures which can contribute to greater safety and service in pupil transportation be enforced.

Remember! Sports Festival dates are Aug. 26-27 at Champaign-Urbana.

International to be Held Nov. 27-Dec. 4

R. Alan Williams, of the agricultural relations department of Wilson and Company, Chicago, will act as superintendent of the swine department at the 1948 International Live Stock Exposition, officials announced this week. He replaces Dr. J. M. Handley who is retiring as superintendent after many years in this capacity.

Williams, who is 30 years old, spent a year as secretary of the Iowa Swine Producers' association before coming to Wilson and Company in March of 1947.

The International Live Stock Exposition is scheduled for Nov. 27 through Dec. 4 in the International Amphitheatre of the Chicago Stock Yard. William E. Ogilvie, secretary-manager of the show, announces that premium lists will be available early in August.

Premiums comprise nearly $100,000 in cash awards. Entries for the individual classes close Nov. 1, for the International Grain and Hay Show Nov. 10, and for the carlot classes of cattle, sheep, and swine on Nov. 20.

CHANGE OF ADDRESS

The address of the American Farm Bureau Federation has been changed from 58 E. Washington Street, Chicago 2, to 109 N. Wabash Avenue, Chicago 2, Ill.

The AFBF Washington office address was also changed Aug. 1. It is now located at 261 Constitution Avenue, N. W., Washington, D. C.

Ma, Pa, and the kids are going to the Illinois Sports Festival Aug. 26-27 at Champaign-Urbana.

A session in the technique of picture taking is given by the IAA publicity department during its photography school for northern Illinois farm advisers and assistants at White Pines State Park in June. Left to right: W. P. Miller, Kendall county farm adviser; Jim Thomson, IAA publicity; Wayne Churchill, Will county farm adviser; Lew Reisner, IAA publicity; and D. M. Chalcraft, Boone county farm adviser, who posed for his picture.

Home Bureau Holds Freedom Forum At MacMurray College

By MRS. EDWARD A. SCHILF
Illinois Home Bureau Federation Publicity Chairman

AN INTENSIVE and varied program, from a discussion of the Marshall Plan to a Mother Goose Party, was sponsored by the Illinois Home Bureau Federation and the Home Economics Extension Service, University of Illinois on July 6-9 at MacMurray College, Jacksonville, for all county Home Bureau presidents and county membership chairmen.

One hundred and sixty-nine delegates from 82 counties registered for the conference which was the 11th meeting of this kind.

Miss Myra Robinson, Edgar county, president of the Illinois Home Bureau Federation, opened the conference with "Our Conference Objectives." The theme for the conference was the same as it has been in the past: "The home should be the center of every woman's interest but not the circumference."

In carrying out the theme, the key to the discussions during the four-day conference was an adequate program both in membership and education.

Outstanding speakers who contributed to the scope of the program were Dr. Carl F. Taeusch, graduate school, St. Louis University, St. Louis, Mo., who discussed "The Situation in Germany," "The Marshall Plan," and "The Bill of Rights," in three sessions. In the "Bill of Rights" discussion he was assisted by a panel of Home Bureau women: Mrs. Henry Carlson, DeKalb county; Mrs. Howard Leach, Macoupin; Mrs. A. L. Canterbury, Sangamon; Mrs. H. D. Bowyer, Cook; Mrs. Floyd Leonhard, Cass; and Mrs. Clarence Clifford, La Salle.

Constance Roach, organization relations officer with Unesco relations staff, gave information concerning Unesco's contribution to peace.

Harlan D. Beem, Coles county superintendent of schools, gave a very thorough presentation: "School Reorganization . . . What is Next?"

Mrs. Spencer Ewing, Country Women's Council of the Associated Country Women of the World, brought to the state meeting information concerning the national organization and the international organization. Mrs. Ewing was the first president of the Illinois Home Bureau Federation.

Miss Marye Dahnke, director of consumer service department of Kraft Foods Company, talked of "Opportunities in Home Economics." Miss Dahnke said that the life of an home economist is never dull and that she has the satisfaction of helping to make the home a better way of living . . . whether she is advising homemakers as part of her career or managing her own home.

Dr. Harold E. Gibson, director of public relations of MacMurray College, welcomed the group to the college and gave some information about the college. Dr. Dorothy Burrows, in charge of the English department, MacMurray College, read poetry to the group. The Rev. McKendree M. Blair of the college conducted the chapel hour each morning.

The Illinois Home Bureau Federation advisory council members who took part in the program were Mrs. R. E. Milligan, Champaign, music chairman, with Mrs. R. A. Shively, Piatt, ac-

TABLE PROTECTORS

Treat your table to a set of hot plate mats. These sturdy pieces are crocheted of rounds of popcorn stitch closely worked for extra protection. Make them of pearl cotton in white or colors or a combination of colors. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

Mrs. John Herron, Kendall county home adviser, explains the Illinois Home Bureau organization to a group of Tennessee Farm Bureau farmers during their visit to Illinois. **(See Pages 4-5).**

for HOMEMAKERS

GOOD GROOMING

Good grooming rates high in business, home and social life. Luckily it is one of the qualities anyone can cultivate. For instance, it's a good idea to repair split seams as soon as they occur and secure loose snaps and buttons before they fall off. During the National Notion Fair beginning August 21, stores will especially feature their notions and the part they play in good grooming. For free leaflet on good grooming for you and your home send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

CHAIR PROTECTOR

The pineapple pattern is a favorite among crocheters who like to crochet for their homes. It is a lacy quality yet protects the surfaces it covers. Here the design is used in a wide chair back set that safeguards a large section of the chair. A picot edge trims the scalloped sides of each piece and accentuates the pointed bottom edge. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

KNIT BLOUSE

For you knitters who want something a bit different, here's a sweater with the feminine styling of a blouse. It's knitted in horizontal rows of drop stitches and is closed in front with six decorative buttons. The graceful shawl collar and snug elbow length sleeves are popular fashion features this season. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

---

companist. They opened each session with group singing. Mrs. Milligan also organized a chorus of those interested and the chorus sang during the conference. Mrs. Milligan assisted by Mrs. Emile Rediger, McLean, recreation chairman, were in charge of the Mother Goose party on Thursday evening, July 8. Mrs. Rediger also had "relaxers" between each session.

Members of the University of Illinois extension staff who assisted with the program were Mrs. Kathryn VanAken Burns, state leader, Miss Lulu Black, Miss Mary Louis Chase, Miss Anna Searl, Miss Gertrude Kaiser, Mrs. Helen Turner, and Miss Jessie Heathman of the publicity department.

Mrs. Dale Huffman, chairman of the IHBF organization committee, gave the membership report which showed a net increase over last year for 7,490 members, making a total membership of 47,962 members.

Mrs. Stanly Castle, past president of IHBF, started the discussion: "The Program as a Basis for Organization". Following the introduction by Mrs. Castle the group was divided into smaller groups to discuss the subject. The IHBF district directors presided at each of the groups: Mrs. George Esgar, northeast district, Grundy; Mrs. Harold Joy, west central district, Morgan-Scott; Mrs. A. W. Dickey, east central district, DeWitt; Mrs. F. J. Warnecke, southwest district, Clinton; and Mrs. Clarence McCauley, southeast district, Jefferson.

Panel Members

The following members appeared on the panel discussion of the "Size and Scope of the County Program": Mrs. Hazel Adams, McDonough, president of the Illinois Home Adviser's Association; Mrs. Kenneth Hudson, Champaign; Mrs. Oscar Schafals, Williamson; Mrs. Will Kenniston, Will; Miss Myra Robinson, Edgar, leader.

Members on the final panel discussion of "What Can I Do to Follow Up the Conference in My County?" were: Mrs. Helen Turner, U. of I. staff; Mrs. Hazel Adams, McDonough; Mrs. John Clifton, Iroquois; Mrs. Victor Schwartzentraub, Tazewell; and Mrs. Floyd Baity, Clay.

Members of the IHBF Advisory council who attended the meeting were Mrs. John Clifton, Iroquois; Mrs. Will Parks, Rock Island; Mrs. Stanly Castle, Madison; and Miss Pearl Barnes, Mercer, all past presidents of the organization.

Chairmen of standing committees who were present were: the three newly appointed members, Mrs. Hugh Roark, Iroquois, legislation; Mrs. Gerald Dickson, Kane, health; Mrs. Wilbur Guthrie, Mercer, 4-H club. Others attending were: Mrs. Charles Young, St. Clair, home safety; Mrs. R. E. Milligan, Champaign, music; Mrs. Dale Huffman, Mason, organization; Mrs. Emile Rediger, McLean, recreation; Mrs. Will Parks, Rock Island, rural schools; and Mrs. E. A. Schilf, Fulton, publicity.

You don't need a Magician

Feed BLUE SEAL DAIRY SUPPLEMENT with your own FARM GRAINS

Profitable milk production depends upon maintaining high milk yields. During the summer, pastures sometimes become dry and fibrous. Dry pastures are lacking in the essential nutrients required to maintain high milk production.

BLUE SEAL DAIRY SUPPLEMENT fed with your own farm grains supplies the necessary nutrients lacking in dry pastures. Keep up milk production! Feed Blue Seal Dairy Supplement and high milk yields will keep production costs low.

Your Blue Seal Feed Salesman will deliver directly to your farm.

FIGHTING FIRE with FIRE

Photo, courtesy — National Safety Council

Have you ever watched a farm go up in flames . . . watched a neighbor standing helpless in the red glare and searing heat as his home, his buildings, his machinery goes up in clouds of fire? Even if you've never seen this tragedy, it happens to neighbors like yours the country over every day. To see it is a SURE CURE — the harshest, most practical argument you can find for fire prevention and the need for insurance.

At times like this, looking at what might have been YOUR loss, you can feel safer — surer — with a Country Mutual Fire Insurance policy. And it can cost you so little to be safe because Country Mutual Fire, cooperatively owned by you and other Farm Bureau member policy holders, passes all savings back to you in the form of dividends.

Ask your Country Mutual Fire counselor just one question. "What will complete fire protection cost me?"

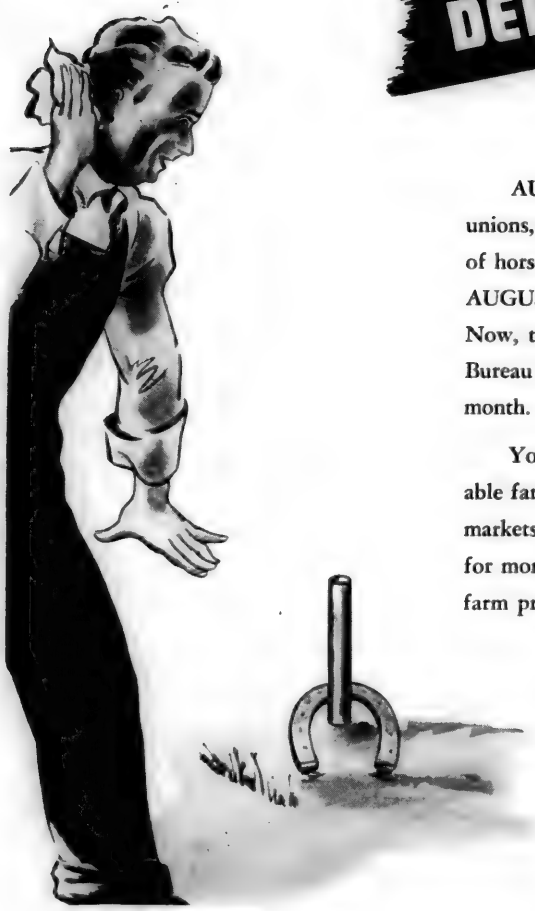
DEAD RINGER



AUGUST . . . . and more leisure time for family reunions, neighborhood picnics, fairs. The sharp, friendly clink of horseshoes is a dead give-away to how times have changed. AUGUST used to be one of our hardest-working months. Now, thanks in great part to your collective efforts as Farm Bureau members, modern machinery makes AUGUST an easier month.

Your Farm Bureau efforts, which have led to fair, profitable farm prices, have made the farm one of industry's biggest markets. While we hold this important position we may look for more and better labor-saving machinery at a cost that fair farm prices will allow us to pay.

A FARM THAT SHRANK 17%

Farmer Gage hadn't heard about estate shrinkage. After his death, a forced sale was necessary to pay taxes, to settle debts. By the time final settlement was made, his wife and children were left a farm 17 per cent smaller than the original estate.

A Country Life insurance policy will furnish a guaranteed liquid reserve to meet immediate cash demands on your estate should anything happen to you. Too often tax law changes, immediate payment of "just" debts, mean estate shrinkage amounting to 17 per cent — larger estates even more.

You can be sure that your estate will be preserved intact for your family with the right insurance policy. Your Country Life adviser will give you full information on the insurance plan which pays the cost FOR the estate instead of FROM the estate.

The Illinois Agricultural Association RECORD is published monthly by the Illinois Agricultural Association at 1301 W. Washington Road, Mendota, Ill. Editorial Offices, 43 East Ohio St., Chicago 11, Ill. Entered as second class matter at post office, Mendota, Ill., Sept. 11, 1936. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1935. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 43 East Ohio St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578. Undeliverable copies returned under Form 3579 to editorial offices, 43 E. Ohio St., Chicago 11, Ill.

THE STATE FARM BUREAU PUBLICATION

Readin' 'Ritin' and 'Rithmetic

BEING SOMEWHAT "allergic" to shucking corn by hand, I purchased one of the first two-row corn pickers in our community. It was a wonderful piece of machinery to look at but like all new machines, there were many poorly designed parts. Plentiful use of baling wire and the welding torch resulted in a more reliable machine for the second season.

For the first time this fall, many Illinois farm children and their parents will participate in the first operation of a new educational machine. The change from the old to the new has been rapid. Many mistakes will be made and the patience of teachers, students and parents will be sorely tried. Like that first corn picker, this new educational machine will require a great amount of adjustment and repair.

THE FARMERS OF ILLINOIS have assumed the leadership in initiating these changes. It is, therefore, their primary responsibility to see that a better educational system emerges from the present confusion. Several needs are already apparent. The state school laws are clearly inadequate to deal with present conditions. We must secure necessary revisions as soon as possible. School modernization depends upon good roads. With proper interest and guidance from the membership your organization is ready to undertake a huge rural road improvement program.

It is probably unfortunate that the long delayed but inevitable revision of our school system has come upon us so suddenly. In too many instances the changes made were the "easy way out".

There have been too many cases of joining or adopting a city system. If we will think always of the best welfare of our children we will build a school system geared to the needs of the rural community and its future citizens.

Every parent and citizen in the community must be ready to cooperate with constructive thought and action. Let us give this new "machine" a chance to serve rural educational needs.

Bureau Grain *Means Business*

By LEW REISNER

Field Editor, IAA Record

THE Bureau County Grain Company, a husky, young cooperative, expects to do a million dollars worth of business this year in grain, fertilizer, coal and Blue Seal feeds. This is big business for a farmer-owned company operating within one county, and doing business for only a short time.

The Bureau county company started buying and selling grain two years ago when it bought the 25,000-bushel elevator and coal yards at Princeton.

Later it took over the distribution of Blue Seal feeds, fertilizers, and other farm supplies, from the Bureau County Service Company.

This year the farmers' company added two elevators in the northeast and northwest sections of the county. The goal is "A Farm Bureau type cooperative elevator within 15 miles of every farmer in the county."

E. Y. Naffziger, president of the Bureau County Grain Company, said that as soon as they purchased the Princeton elevator, and before they had bought a bushel of grain, they were considered the leading competitor in Bureau county.

"I guess," Naffziger said, "that others know we mean business this time because we've planned big enough.

"In the past our local farmers' elevators have been too small. Now, with our county, river, and later terminal elevators, we're going to be big enough to compete.

"We'll do things we just can't do in county elevators. We'll be able to blend, for one thing, and that takes volume."

Bureau is one of eight new Farm Bureau-type grain companies in north central Illinois. Grain producers in Lee, Henry, Stark, Peoria, Marshall-Putnam, La Salle, and Woodford counties are banded together as the Prairie Grain Company.

These eight counties will furnish much of the grain marketed by the Prairie Grain Company through its new river elevator at Hennepin, a second being built at Lacon, and a third to be built at Ottawa.

Farm leaders in Bureau county know their grain company faces stiff competition. The established grain trade has reduced margins in the Hennepin area on wheat to as little as one cent a bushel. In southern Illinois, where they do not have this competition, margins on wheat are running to 20 cents a bushel.

The elevators at Sheffield were largely farmer-owned and were purchased by Bureau County Grain Company in an interesting way. The Sheffield elevators called in their stock and paid it off at par value plus two year's stock dividends.

Then the Bureau grain company bought Sheffield's two elevators and facilities, and authorized the sale of stock to cover the investment. The stock was offered to Sheffield farmers and they bought it all in a relatively short time.

"We were pleased with the enthusiasm and interest shown by the Sheffield board of directors who acted in behalf of the stockholders. We feel their reasoning was wise. In a way it was more of a transfer than a sale. They were buying back their own property," Naffziger said.

"But more than this, they were putting into a larger unit, the elevator they already had. They've got a county and state organization backing them now. They'll have refunds and savings from a county, state, and later, a national cooperative, to help them."

C. P. Brandt, until recently manager of the Bureau grain cooperative estimates that this year the cooperative will handle more than $500,000 in grain, $110,000 in plant food, and $400,000 in Blue Seal feeds and other farm supplies.

The grain company not only buys grain for shipping but also

(*Continued on page* 22)

TRACKING DOWN ANIMAL DISEASE

QUICKER ways to shut the door on livestock diseases, and to prevent their spread, are available to Illinois farmers through the three regional testing laboratories set up recently by the state Department of Agriculture.

The new laboratories, equipped to track down obscure animal diseases, can make complete bacteriological and blood tests, perform urinalysis, and do clinical chemistry work.

Farmers and veterinarians are invited to submit specimens to the state-supported laboratories for diagnosis. The laboratories are located at Centralia, Peoria, and Chicago. A fourth laboratory, where this same work is done, is located at Champaign-Urbana, and is operated by the College of Agriculture.

The four laboratories will work together to bring laboratory facilities closer to farmers and veterinarians throughout Illinois.

The idea for these regional laboratories originated with a committee representing various agricultural interests, and was supported by the Illinois Agricultural Association and the state medical and veterinary professions.

The purpose of the laboratories is to help the veterinarian give better and more efficient service to the livestock and poultry owner.

In the words of Dr. Frederick W. Boebel, director of the Peoria laboratory: "The day of over-the-fence diagnosis is fading out. Modern laboratory facilities make it possible to diagnose obscure diseases which otherwise might go undetected.

"Many diseases out in the field have similar symptoms and only through laboratory facilities can you differentiate between the various diseases accurately," he says.

"We have had chickens sent in to us at the Peoria laboratory to distinguish between range paralysis and Newcastle disease. We have also had specimens sent in to distinguish between anthrax, black leg and hemorrhagic septicemia, or between swine erysipelas and malignant edema."

The laboratories are for diagnosis only. The treatment is left to local veterinarians. Here, as Dr. Boebel explains it, is how the service works.

"A farmer or veterinarian brings in a pig that is either dead or dying. He wants to know what is wrong. If the pig is alive we kill it and perform an autopsy to see what we can find inside the animal.

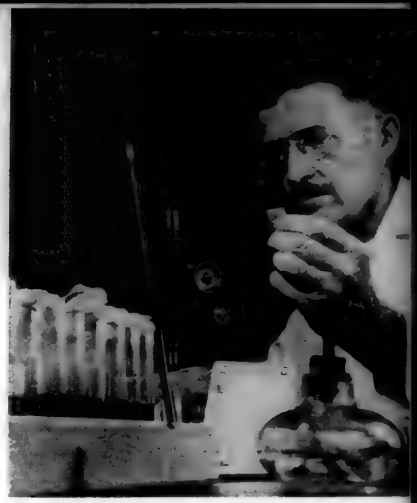
"Perhaps the pig shows lesions of erysipelas. We immediately take some of the blood and inject it into a pigeon. If it is erysipelas the pigeon will be dead in 18 hours.

"We then notify the local veterinarian of our findings and he can then prescribe the proper treatment."

This is the type of work the laboratories are equipped to handle, and work a busy veterinarian would not have time to do. A farmer sending the laboratories specimens must furnish the name of his veterinarian with each specimen.

In addition to the diagnostic work, the laboratories are doing the blood testing for Bang's disease control work.

The Peoria diagnostic laboratory is located at 2101 S. Washington street, Peoria; the Centralia laboratory at 114 West Broadway, Centralia; and the Chicago laboratory at Room 206, 999 Exchange avenue, Chicago 9.



Examining a bacteria slide stained to make it visible is V. E. Peterson, assistant director and chief bacteriologist at the Peoria laboratory.

Shown at work (left) in the Peoria laboratory are Dr. F. W. Boebel (left) and William Herman, laboratory helper. At the Centralia laboratory (right) are Dr. L. D. Jones (left) and George Emmett, technician assistant.

HOW is the Sta

YOUR M

By JIM THOMSON
Ass't Editor, IAA RECORD

LIKE the cost of living, the cost of state government is up. Away up. Today, Illinois is spending more of your money faster than it ever did before. More than twice as fast as it did 10 years ago. Just 21 years ago, state government cost Illinois taxpayers $75,000,000 a year.

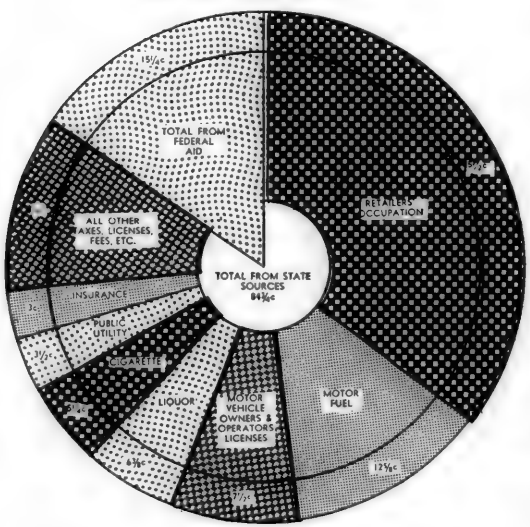
The two-year budget for 1948-49 is $822,164,160. Appropriations, that is, funds assigned for a particular purpose, are even higher than the budget . . . running slightly more than one billion dollars.

But 21 years ago the taxpayers didn't expect the state to do as many things for them as they do today. At that time local governments took care of their own old people, their blind, their poor, their widows and orphans. It didn't cost the state government a nickel. As for schools, the state spent less than a tenth of what it spends today.

For 1948 and 1949, the cost of old age pensions and other public aid alone will run about $106,000,000 annually, more than the state spent in 1930 for all purposes.

Where The 1947 State Dollar Came From . . .

(Fiscal Year ending June 30, 1947)



"Newer taxes and more taxes" is the bleak prediction by the Illinois Taxpayers Federation if the state goes the limit on its spending power for 1948-49.

What or who is responsible for Illinois' increasing spending? As we said before, for one thing, costs have gone up since 1939. It costs more to support the government just as it costs more to support your home.

As to who is responsible, perhaps you are to some extent. You are if you have supported the need for higher old age and blind pensions, better care for our dependent children, better care for inmates of our state institutions, and more money for education. You are if you voted to give Illinois veterans the bonus which will require the sale of $385,000,000 in state bonds. You are if you didn't vote at all because you defaulted when you had a chance to express your opinion.

The cost of state government is the concern of every taxpayer. It is of particular concern today when county, city, and village officials, as well as school boards in big and little communities throughout Illinois are struggling with the problem of making ends meet. Most are considering or have considered new sources of revenue.

Burdened by financial difficulties, Chicago has led the fight to get the state to turn back to the cities one-fourth of the money the state collects from the retailers' occupation tax, commonly known as the sales tax.

The Illinois Agricultural Association is strongly opposed to this diversion of the sales tax to the cities. The IAA maintains that counties, townships, school districts, and all other local governments have the same problem of increased costs.

"The sales tax," says an IAA resolution approved by the board of delegates to the last annual convention, "is paid by all citizens, not merely those living within the corporate limits of cities. It would be unfair to pay over to cities taxes which have been paid by all citizens, many of whom reside outside the corporate limits of a city."

Meanwhile the state administration is resisting all efforts to divert income from the sales tax to the cities. It maintains that all of the revenue from the sales tax is necessary to meet the rising costs of state government.

Local officials argue that with revenues greater (sales tax revenue was $66,483,484 in 1941; $139,945,578 in 1947) the state should have more funds to give to local governments. The state administration answers that rising costs are keeping pace with income.

Gov. Dwight Green has suggested that "The cities also have the further alternative of curtailing unnecessary expenses and less essential expenses to meet added costs of the

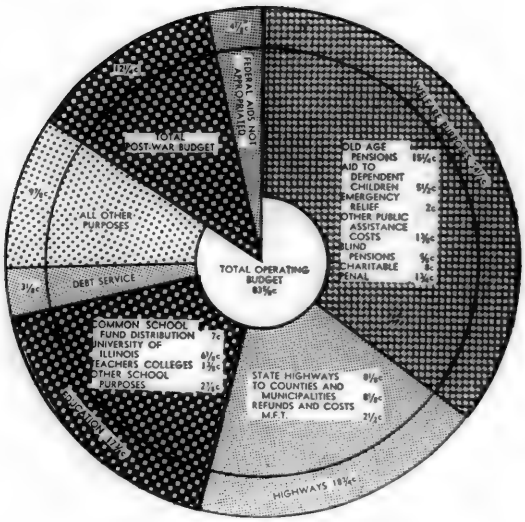
most vital municipal services. How completely any municipality has explored that possibility I, of course, am not prepared to state."

The Illinois Taxpayers Federation feels that the state could use a little of this advice itself. The Federation believes that the state can do a better job of cutting costs and could do better with less. The Taxpayers Federation is convinced that the crying need at present is for a comprehensive study by an outside organization of all phases of state government for greater economy and greater efficiency.

In spite of this, it cannot be ignored that the upkeep of our state institutions, even at their pre-war level, costs us far more because of higher prices. Besides, virtually all of our state institutions have more inmates than they did in 1939.

To show how the cost of operation of state institutions has increased since before the war, let's take the University of Illinois for example. It cost the Illinois taxpayers $5,357,427 to operate in 1939. The appropriation for 1948-49 (two years) was $43,083,818.

During the war state spending dipped slightly as repairs and construction of roads and buildings were postponed.



Where The 1947 State Dollar Went . . .

(Fiscal Year ending June 30, 1947)

The pent up need for better roads, new and improved buildings is now with us at tremendously inflated costs. Some of this work must be done now in spite of high costs. What isn't absolutely necessary is being postponed further.

From the chart on this page you will notice that more than half of all the money spent by the state is for welfare and school purposes. For welfare, 34½ cents out of every dollar spent; for education, 17⅜ cents. Perhaps these funds could be spent more efficiently but there is little likelihood that spending for schools and welfare can be reduced much without hurting our educational system and without increasing the distress of the aged, widows and orphans, and the institutional patients.

To you who vote on state bond issues it should be pointed out that interest on the state debt alone in 1947 cost the taxpayers of Illinois nearly four million dollars. Interest payments in the next several years will be much higher due to payment of the Illinois veterans' bonus.

Where does the money come from to pay these increasing costs of state government and will they remain steady sources of income? In 1947 more than half of the state income came from the sales tax, $139,945,578, and from taxes and licenses on motor vehicles and motor fuel, $79,373,434.

Of the taxes on motorists two-thirds of the gasoline tax is returned to your local government. It is doubtful that the income from these sources will remain anywhere near these levels if there is a business recession. When that time comes, the state will find it necessary to curtail expenditures drastically or find new sources of income.

State authorities have pointed many times to the fact that Illinois does not have a state property tax or a state income tax.

(*Continued on page 22*)

Walter Splinter gazes fondly at one of his fine Holstein cows. This cow was in herd when Splinter broke the national record in 1939 for twice a day milking.

Champion Dairyman

Walter Splinter has a knack with dairy cows. Unaided, he broke national record in 1939 for twice-a-day milking.

WALTER Splinter, 48, a soft-spoken dairyman who farms near Winslow in Stephenson county, has a way with dairy cows that borders on genius. In 1939 his herd established a national record for twice-a-day milking. At that time Splinter was almost unknown as a dairy breeder.

This spring his herd again proved their ability. In April his 23 Holsteins placed first among the 1,589 herds on test in Illinois. In March they had been in fourth place.

A modest man, Splinter says he is surprised himself at the records his cows have made. He claims no special formula for success.

When his herd established the twice-a-day record in 1939 they produced 615 pounds of butterfat and 16,366 pounds of milk, more than three times the Illinois average. At that time he was on a 78-acre farm, milking eight cows. Two of these cows are still in his herd.

Splinter's farm is located only a few miles from the Wisconsin state line. He lives comfortably in a neat white frame house with his wife and 11-year old daughter, Viola. The window in their modern kitchen overlooks a well-kept lawn which slopes down to a small creek and a wooded pasture beyond, where Viola's sheep and lambs graze.

Started on 42 Acres

Walter Splinter started farming a mile up the road on his grandfather's 42-acre farm when he was 16 years old. This was in 1916.

"I must have joined Farm Bureau shortly after this when I was 18 or 19 years old," Splinter recalls. "They sent me a 25-year membership pin several years ago." He also has one of the first life insurance policies sold by Country Life. It was for $1000. He wishes it were for more.

Herd Cost Little

In 1922 Splinter bought a 78-acre farm and lived there for 22 years. Then in 1944 he bought the farm across the road where he now lives. He farms 174 acres at present and has increased his herd to 23 cows.

In 1923 Splinter bought his first pure-bred Holsteins, two aged cows and two yearling heifers. They came from a herd not far from Splinter's farm and cost the young farmer a total of $500. "I was lucky with these foundation cows," Splinter said. "They produced good calves."

It has cost him very little to build his herd. The most he ever paid for a herd sire was $450. He has relied on his own breeding program to build his cow herd, raising his own heifer calves. He does not advertise and never has showed an animal in a judging ring. This has meant that Splinter has had for the most part only a local market for his surplus stock.

Surplus Sells Cheaply

His bull calves sell for $150-200. The most money he has ever received for cattle was the $1000 he got for three cows he sold at a Waukesha, Wis., sale in 1940. "It was right after I'd made the national record. It isn't so much money now but it made me feel good then." The three days at the sale is the longest he has spent away from his farm.

"About this time I had big breeders coming here from all over and my surplus sold pretty well," he related. One day a southern gentleman from Mississippi drove in his yard in a big car driven by a colored chauffeur. He wanted a look at Splinter's herd.

When war broke out he had to quit testing since his local association was unable to hire a cow tester. He is just getting back to testing again.

To be successful as a dairyman Splinter suggests starting with good cows. "You can't do much with a cow that doesn't have it in her to milk well."

A good cow must be fed well and handled quietly. "A dairy cow responds more to gentle handling than any other farm animal," Splinter has found.

Grains Year Around

He feeds them by the old rule of thumb, one pound of grain for every four pounds of milk. His ration: corn, 400 pounds; oats, 200; bran, 100; linseed meal, 50; soybean meal, 50. In the summer he substitutes soybean for the linseed meal.

Splinter's herd is milked regularly, the time never varying more than 15 minutes. They are also fed grain every day even on the best of pasture.

Morning and evening his cows are waiting at the gate to be milked. "I had to get my cows from the pasture only once last summer," Splinter said. They are almost pets.

Field Editor, IAA RECORD

Model Landlord

By following Golden Rule Oscar Kiest has earned the name of best landlord in Logan county

Therefore all things whatsoever ye would that men should do to you, do ye even so to them—Matthew VII. 12.

ARE landlords people? This question was asked of his readers recently by a metropolitan newspaper columnist. He evidently had had some trouble with his landlord.

If he asked Harold Fue of Logan county that question, Fue probably would say: "Yes landlords are people. Some are the very best of people. And you can include my landlord among them."

Fue operates a 160-acre farm near Lincoln on a 50-50 crop share basis with Oscar Kiest, the landlord.

Possible areas of friction between landlord and tenant are many, but Fue and Kiest have submerged their differences over the years until they now work together as a harmonious team.

Both have the same motto: "What makes money for him, makes money for me." The result: both have prospered from the farm. Now after 21 years as Kiest's tenant, Fue feels he is in a position to buy his own farm. What bothers him most on that score, however, is his feeling of reluctance at leaving the farm where he has built up a long tradition of good relations with his landlord.

Kiest, though well-versed in scientific farming, doesn't tell Fue what or when to plant. He feels that Fue is a good enough farmer to do that himself. The tenant does, however, keep his landlord informed on all operations as a matter of course.

Both landlord and tenant take a great deal of pride in raising crop yields. In 1946 Fue brought in 97.7 bushels of corn per acre.

Kiest is one of the few landlords in Logan County who furnishes his tenant with seed. Besides he pays for half the cost of inoculation. He is also generous in taking care of all plant food needs. All of the land has been limed twice and all has been phosphated once and some twice.

Fue said he once asked his landlord for 200 fence posts. Four hundred were delivered. Mrs. Fue is particularly happy about the care Kiest gives the buildings and the farm home. The house has modern plumbing with stoker heat, hot and cold running water, and a water softener. Fue liked the modernization so well, he pitched in to help with the installation of the plumbing and dug out the basement.

By JIM THOMSON
Ass't Editor, IAA RECORD

Sold on the advantages of modern methods of farming, Kiest, at his own expense, sent Fue to a University of Illinois College of Agriculture short course. Fue has since gone on his own.

Kiest had a renter on another farm for 32 years and a third for 10 years. He owns a place in Missouri and one summer he took Fue and another tenant along to see his cotton fields there. The men were gone four days. Kiest paid all expenses.

Fue keeps his own livestock on the farm. He pays cash rental on the pasture-land and alfalfa ground. As a condition that he pay for all fertilizer, Kiest receives the soil conservation payments.

A one-year lease is the Logan county custom but for many years Kiest and Fue haven't bothered with new leases. They let the old one ride.

Kiest says there are many advantages in the long-time lease especially if you get a good tenant. The morale of the long-time tenant is high and he takes better care of the soil, the buildings, and the equipment.

"My advice to landlord and tenant," Fue said, "is to be honest with one another. You will both be better off and you will be able to work in harmony."

Fue stopped in the midst of his work in the fields and looked thoughtfully towards the horizon. "I've had a lot of ups and downs," he said, "but life on this farm has been pretty good when you consider that I arrived in Lincoln in 1912 with only $12 in my pocket."

The writer followed his gaze across the fields and spoke in admiration of a cluster of beautiful buildings on an adjacent farm.

"That's one of Mr. Kiest's farms," Fue said with a smile.

Left: Landlord Oscar Kiest (left) talks over operations with Tenant Harold Fue at planting time. Right: Mrs. Fue discusses the kitchen of her home with Mr. Kiest. Kiest had modern plumbing installed in the Fue home.

Walter Splinter gazes fondly at one of his fine Holstein cows. This cow was in herd when Splinter broke the national record in 1939 for twice a day milking.

This spring his herd again proved their ability. In April his 23 Holsteins placed first among the 1,589 herds on test in Illinois. In March they had been in fourth place.

A modest man, Splinter says he is surprised himself at the records his cows have made. He claims no special formula for success.

When his herd established the twice-a-day record in 1939 they produced 615 pounds of butterfat and 16,366 pounds of milk, more than three times the Illinois average. At that time he was on a 78-acre farm, milking eight cows. Two of these cows are still in his herd.

Splinter's farm is located only a few miles from the Wisconsin state line. He lives comfortably in a neat white frame house with his wife and 11-year old daughter, Viola. The window in their modern kitchen overlooks a well-kept lawn which slopes down to a small creek and a wooded pasture beyond, where Viola's sheep and lambs graze.

Started on 42 Acres

Walter Splinter started farming a mile up the road on his grandfather's 42-acre farm when he was 16 years old. This was in 1916.

"I must have joined Farm Bureau shortly after this when I was 18 or 19 years old," Splinter recalls. "They sent me a 25-year membership pin several years ago." He also has one of the first life insurance policies sold by Country Life. It was for $1000. He wishes it were for more.

Herd Cost Little

In 1922 Splinter bought a 78-acre farm and lived there for 22 years. Then in 1944 he bought the farm across the road where he now lives. He farms 174 acres at present and has increased his herd to 25 cows.

In 1923 Splinter bought his first pure-bred Holsteins, two aged cows and two yearling heifers. They came from a herd not far from Splinter's farm and cost the young farmer a total of $500. "I was lucky with these foundation cows," Splinter said. "They produced good calves."

It has cost him very little to build his herd. The most he ever paid for a herd sire was $450. He has relied on his own breeding program to build his cow herd, raising his own heifer calves. He does not advertise and never has showed an animal in a judging ring. This has meant that Splinter has had for the most part only a local market for his surplus stock.

Surplus Sells Cheaply

His bull calves sell for $150-200. The most money he has ever received for cattle was the $1000 he got for three cows he sold at a Waukesha, Wis., sale in 1940. "It was right after I'd made the national record. It isn't so much money now but it made me feel good then." The three days at the sale is the longest he has spent away from his farm.

"About this time I had big breeders coming here from all over and my surplus sold pretty well," he related. One day a southern gentleman from Mississippi drove in his yard in a big car driven by a colored chauffeur. He wanted a look at Splinter's herd.

When war broke out he had to quit testing since his local association was unable to hire a cow tester. He is just getting back to testing again.

To be successful as a dairyman Splinter suggests starting with good cows. "You can't do much with a cow that doesn't have it in her to milk well."

A good cow must be fed well and handled quietly. "A dairy cow responds more to gentle handling than any other farm animal," Splinter has found.

Grains Year Around

He feeds them by the old rule of thumb, one pound of grain for every four pounds of milk. His ration: corn, 400 pounds; oats, 200; bran, 100; linseed meal, 50; soybean meal, 50. In the summer he substitutes soybean for the linseed meal.

Splinter's herd is milked regularly, the time never varying more than 15 minutes. They are also fed grain every day even on the best of pasture.

Morning and evening his cows are waiting at the gate to be milked. "I had to get my cows from the pasture only once last summer," Splinter said. They are almost pets.

Model Landlord

By following Golden Rule Oscar Kiest has earned the name of best landlord in Logan county

Therefore all things whatsoever ye would that men should do to you, do ye even so to them—Matthew VII. 12.

ARE landlords people? This question was asked of his readers recently by a metropolitan newspaper columnist. He evidently had had some trouble with his landlord.

If he asked Harold Fue of Logan county that question, Fue probably would say: "Yes landlords are people. Some are the very best of people. And you can include my landlord among them."

Fue operates a 160-acre farm near Lincoln on a 50-50 crop share basis with Oscar Kiest, the landlord.

Possible areas of friction between landlord and tenant are many, but Fue and Kiest have submerged their differences over the years until they now work together as a harmonious team.

Both have the same motto: "What makes money for him, makes money for me." The result: both have prospered from the farm. Now after 21 years as Kiest's tenant, Fue feels he is in a position to buy his own farm. What bothers him most on that score, however, is his feeling of reluctance at leaving the farm where he has built up a long tradition of good relations with his landlord.

Kiest, though well-versed in scientific farming, doesn't tell Fue what or when to plant. He feels that Fue is a good enough farmer to do that himself. The tenant does, however, keep his landlord informed on all operations as a matter of course.

Both landlord and tenant take a great deal of pride in raising crop yields. In 1946 Fue brought in 97.7 bushels of corn per acre.

Kiest is one of the few landlords in Logan County who furnishes his tenant with seed. Besides he pays for half the cost of inoculation. He is also generous in taking care of all plant food needs. All of the land has been limed twice and all has been phosphated once and some twice.

Fue said he once asked his landlord for 200 fence posts. Four hundred were delivered. Mrs. Fue is particularly happy about the care Kiest gives the buildings and the farm home. The house has modern plumbing with stoker heat, hot and cold running water, and a water softener. Fue liked the modernization so well, he pitched in to help with the installation of the plumbing and dug out the basement.

By JIM THOMSON
Ass't Editor, LAA RECORD

Soil is one of the advantages of modern methods of farming. Kiest, at his own expense, sent Fue to a University of Illinois College of Agriculture short course. Fue was glad to do his own [illegible]

Kiest [illegible] another farm for 25 years and a third for 10 years. He owns a place in Missouri and one summer he took Fue and another tenant along to see his cotton fields there. The men were guests on the trip. Kiest paid all expenses.

Fue keeps his own livestock on the farm and pays cash rental on the pasture land and alfalfa ground. As a condition that he pay for all fertilizer, Kiest receives the soil conservation payments.

A one year lease is the Logan county custom but for many years Kiest and Fue haven't bothered with new leases. They let the old one ride.

Kiest says there are many advantages in the long-time lease especially if you get a good tenant. The morale of the long-time tenant is high and he takes better care of the soil, the buildings, and the equipment.

"My advice to landlord and tenant," Fue said, "is to be honest with one another. You will both be better off and you will be able to work in harmony."

Fue stopped in the midst of his work in the fields and looked thoughtfully towards the horizon. "I've had a lot of ups and downs," he said, "but life on this farm has been pretty good when you consider that I arrived in Lincoln in 1912 with only $12 in my pocket."

The writer followed his gaze across the fields and spoke in admiration of a cluster of beautiful buildings on an adjacent farm.

"That's one of Mr. Kiest's farms," Fue said with a smile.

Left: Landlord Oscar Kiest (left) talks over operations with Tenant Harold Fue at planting time. Right: Mrs. Fue discusses the kitchen of her home with Mr. Kiest. Kiest had modern plumbing installed in the Fue home.

★

SIXTEENTH in our series of picturesque and historic Illinois scenes is the bank at Shawneetown in Gallatin county. It was built by the state in 1838 as successor to the first bank in Illinois which was erected in 1816, just two blocks away. The first bank in Illinois was also the first in the Northwest territory. It still stands.

The 110-year-old bank is three stories high and 40 feet by 60 feet. It cost in the neighborhood of $90,000. When it was erected, Shawneetown was a busy river trading center. Since then the town has declined in importance and the bank appears immense for the size of the community.

★ ★ ★

The impressive Doric sandstone columns fronting the bank were floated down the Ohio River from Pittsburgh on a flat boat. Note the dark stain on the lower half of the columns. When the Ohio River flooded the town in 1937 it rose nearly halfway up the columns and stained the sandstone.

Best known tale about the bank, which may be fact or fiction, is the story about representatives of the infant city of Chicago riding on horseback to the bank at Shawneetown to negotiate a loan of $1,000 for the development of the city. The Shawneetown bankers got an independent report on Chicago and its prospects and refused to make the loan. The story goes that Chicago was too far from Shawneetown and would never amount to anything.

GOOD RURAL ROADS NO DREAM HERE

By CHARLES S. MAYFIELD, Director
IAA Road Improvement Department

HERB KILTZ was in the office the other day and we had quite a talk about the roads in his township in McHenry county. Herb is a member of the Illinois Agricultural Association road committee. He has long been interested in farm-to-highway roads, and loves to talk about them. It was not hard for him to show me why the roads are good in Dorr township.

He had some very interesting figures. He said his township has good roads because it has a good road commissioner, modern road equipment, and a road income that allows full use of this equipment.

Part of the township's equipment is shown in the picture. This equipment together with three snow plows and other miscellaneous items represent an investment of over $22,000.

Both Martin Ladefoged, township road commissioner, and his brother Jim are expert road men. They put in full time on the 48 miles of township road. They are also expert mechanics and take excellent care of the equipment. They work the entire year.

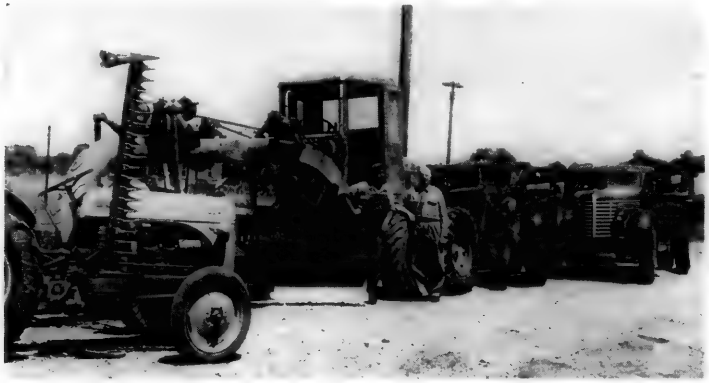
Their annual township road and bridge money is sufficient to buy materials for surfacing the roads. The township money comes in as follows:

Road and Bridge Tax	$ 9,000
Gravel Tax	11,000
Blacktop bond issue tax	13,000
Township road income	$33,000

Herb laughed and said it would seem that his township has no road problem. Some folks might wonder just why the IAA has appointed a committee to study Illinois road problems. Then Herb tapped the desk with his pencil and explained what he was thinking about. Here it is:

"How many townships in Illinois can afford an investment of over $22,000 for equipment? How many can hire two expert men, and pay for the upkeep of equipment and road materials necessary to keep the men and equipment busy all year? How many townships in Illinois are able to spend $33,000 a year on township roads? Present day prices for equipment and buildings to house it, will probably run between $35,000 and $40,000. Road materials have almost doubled in price."

Herb suggests you compare your township road setup with his or check it with others. If you do this, you will begin to see where the road problem exists. Then if you can find the answer, we would appreciate having it. We need to have more people thinking about farm-to-highway roads on a scale larger than just their own locality.



Part of the road equipment of Dorr township in McHenry county is shown above. Three snowplows and other miscellaneous equipment are not shown in this picture. Left to right: Martin Ladefoged, road commissioner; Herbert Kiltz, member, IAA road committee; and Jim Ladefoged, township road district employee.

FOUR ★ EXTRAS!

★ EXTRA Riding Ease

Enjoy a soft, smooth ride. Tire absorbs bumps instead of bouncing.

★ EXTRA Driving Ease

Enjoy added driving ease. Reduced vibration lengthens car life.

★ EXTRA Safety

Enjoy better tire traction and resistance to skidding.

★ EXTRA Mileage

Enjoy added mileage made possible by this cooler-running tire.

The first new Blue Seal Master Extra Low Pressure tire has been delivered to the Illinois Farm Supply Company. This new tire which is now rolling off the production lines will soon be available at your local Service Company.

This is the tire you have been waiting for -- it is the tire that gives the easy ride -- so smooth its like floating on air.

The Blue Seal Extra Low Pressure tire offers many extras -- extra riding ease -- extra driving ease -- extra safety -- and extra mileage.

Watch for it at your Blue Seal Service Station.

At Santa Fe dinner, left to right, are: C. A. Hartquist, manager, Henderson County Livestock Marketing Association; W. E. Goodloe, general livestock agent, Kansas City; Howard G. Nicholson, general freight agent, Chicago; Otto Steffey, IAA board member and Henderson Association president; R. J. Yost, division superintendent, and S. F. Russell, IAA director of livestock marketing.

Farmers, Railroad Men Join in Shipper Appreciation Dinner

HENDERSON County Livestock Marketing Association is just one of the youngsters in the Stronghurst business family, but the community is mighty proud of its bustling junior.

New honors came to the young business in August when the Santa Fe railroad gave an appreciation dinner to some 100 members of the Association. High officials of the railroad came from Kansas City and Chicago to tell the livestock shippers of the county how much they appreciated their business.

After a roast beef dinner topped off with deep dish apple pie and ice cream, the railroad officials, station agents and livestock producers all agreed that the dinner was a good idea, but they should have thought of it 20 years ago.

The Henderson Association under the managership of C. A. Hartquist has made a phenomenal record since it opened Jan. 6, 1947. For the first six months of 1948 some 478 decks of livestock have moved out of the Stronghurst point as compared with 352 decks for the first six months of 1947.

During his visit to the IAA offices in Chicago, Prof. Glen Salisbury (right), head of the dairy production department, U. of I., discusses marketing problems with Judson Mason (left), IAA dairy marketing; and O. H. Ryan, president, Illinois Milk Producers Association.

Illinois Ranks Near Bottom in Milk Production Per Cow

ALTHOUGH Illinois has made great strides in the dairy industry within recent years, particularly in marketing, it has some real problems from the production point of view. This thought was expressed by Prof. Glen Salisbury, head of the dairy production department, University of Illinois, when he recently met with the board of directors of the Illinois Milk Producers Association.

"The dairy industry," he said, "developed in Illinois largely as a side line operation. This may be largely responsible for the low degree of efficiency in Illinois milk production."

Prof. Salisbury pointed out that Illinois ranks near the bottom in the amount of milk produced per cow. Increasing milk production per cow and decreasing the seasonality of milk production to more nearly fit the needs of fluid milk markets, were two programs discussed by Prof. Salisbury. He cited the need for a better dairy production department at the University of Illinois and stressed particularly the need for a good research program.

Spray Again to Kill Last of Flies On Your Farm

THE second round of spraying with DDT for flies should be completed soon or farmers may lose the gains they've made already in the war on flies. Only a few flies remain on most farms, but these few can soon start a new population.

H. B. Petty, entomologist with the Natural History Survey and the University of Illinois College of Agriculture, points out that the weather during recent weeks has been hot and humid much of the time, ideal for increasing the fly population.

"Sanitation and clean-up are still in order," Petty says. "We need to clear out all remaining fly breeding places and get busy with the DDT and sprayers again.

"Rain, heat and sunlight tend to destroy the killing power of DDT previously applied to outside areas. These places should be resprayed just as soon as possible," he concludes.

Illinois farmers and small town residents have done a remarkable job this summer of ridding their premises of flies. The work was directed on a county-wide basis by farm advisers in 89 county Farm Bureaus.

A survey completed last month by the RECORD showed that in these cooperating counties an estimated six out of ten farmers sprayed with DDT. Results were uniformly successful.

The fly-free campaign began in the spring with a drive to rid farms and cities of fly-breeding areas. This was followed by spraying with DDT.

The fly-free campaign was supported by the Illinois Agricultural Association, the University of Illinois College of Agriculture, the Natural History Survey, and the State Department of Public Health.

LETTERS TO THE EDITOR

FROM EX-RURAL YOUTHER

I'VE BEEN thinking for some time that I should write and then when a news release about the Rural Youth tour came in I decided to get right at it.

The reason for my having access to a news release is that we get U. of I. radio news here at WKTY. I've been working in radio as a farm director since the first of the year. The big reason for my getting into radio was my Rural Youth and Farm Bureau activity. That's why I've wanted to write. I feel that I owe something to the people who were so nice to me and did so much for me in Illinois Rural Youth. I've always heard that you get out of a thing just what you put into it, and that's just how it worked with Rural Youth. Rural Youth got me my job.. I worked for WLPO in LaSalle, Illinois, first and then came here July 1. The only way I could be happier would be to be closer to home.

I'd like to make Rural Youth camp this year, but that's impossible. I do hope though to get to the IAA convention in Chicago next winter.

Wisconsin has no Rural Youth and it's certainly a shame. I think you should bring some Illinois Rural Youthers up here and do some missionary work. It would make a grand tour.

I'd better close now as I have a news cast coming up.

Bill Mason, Farm Director
Station WKTY
La Crosse, Wisconsin

WANTS COUNTRY SCHOOL

AFTER reading about the rural school bus on page 12 in July's RECORD I sort of agree with the mother who doesn't want her six year old meeting the 6 o'clock bus.

After all a child of six is just a baby and needs those extra hours of sleep. Of course a school bus is safe.

But does that give the child that extra shut eye? No!

I used to go to a city school and I've gone to country schools. It may seem strange to you but I say: "Give us back our country schools". And to make your book more interesting lets have a poem page too. I love to write poems. I enjoy THE RECORD very much.

Mrs. Elmer Lyons
Montgomery County

RURAL YOUNG MARRIEDS

I'M SORRY that I have not written before concerning our Edwards County Rural Young Married Couples organization.

This is our second year of being organized. At the present time we have 32 members and the prospects of 28 more. A couple must attend our meetings two times to become a member. Our committee for a meeting is selected by drawing the names of three couples from the "hat." There have been 33 different children attending the meetings this year.

So far this year we have had four outdoor meetings, a wiener roast, swimming, a picnic supper, and our June meeting's big hit was a mock wedding. Some of our other meetings have been a Valentine party, St. Patrick's day party, and our May meeting was as guests of Rural Youth.

We have had several very interesting educational features given by local people. At our last meeting, our local dentist, Dr. Clyde Straup, enlightened our group on a new tooth powder which is being used in several school programs this year. Some of our other speakers have spoken on insurance and the showing of moving pictures of a trip through Alaska.

I hope you have some idea from this letter as to how our group works.

Mrs. Don Cowling
Edwards County

LIKES COVER

I'VE been enjoying and appreciating your cover pictures and keep looking forward for new surprises. Several of the small (inside) descriptive pictures have been saved for my scrap book — where, by the way, only choice material is considered. I hope the old state house at Kaskaskia is coming up — and how about the present one?

Mrs. Blanche Wilhelm
Fulton County

RECEIVE SCHOLARSHIPS

Above are two of three medical students awarded IAA-Illinois Medical Society loans. Right is Burton Bagby, 35, Mounds, and, left, L. C. Fiene, 21, Sparta. They have agreed to practice five years in community of 5000 or less after internship.

TWO FROM IAA JOIN ILL. FARM SUPPLY STAFF

TWO men from the staff of the Illinois Agricultural Association have transferred to the Illinois Farm Supply Company, the IAA's largest affiliate.

C. E. Strand, for the past 10 years manager of the Illinois Agricultural Auditing Association, will become Farm Supply Company comptroller starting Sept. 1.

W. W. Whitlock, IAA director of public health and safety for the past two years, has become director of safety for Farm Supply.

A. F. Schuck Joins Treasurer's Staff

ARTHUR F. SCHUCK, who was associated with Sears, Roebuck and Company, in many positions for 12 years, has joined the staff of the treasurer's office of the Illinois Agricultural Association.

A. F. Schuck

Just prior to coming with the IAA, Schuck was associated with one of the larger mortgage investment organizations of Chicago.

A veteran of World War I, Schuck held responsible positions during World War II in several ordnance plants.

Schuck had a wide variety of business experience with Sears starting in 1928 and continuing until 1940. He was first assigned to the staff of the vice-president of finance and his major work was with the factory organizations. Later, he was made assistant to the vice-president in charge of retail administration. He then was called upon to serve as operating manager of the company's rock wool plant at Wabash, Ind. His next assignment placed him in the position of president and general manager of Sears' three sporting goods manufacturing companies. Just prior to the outbreak of World War II, Schuck was named comptroller and treasurer of Encyclopedia Britannica.

Born in Washington, Ind., May 11, 1896, Schuck attended grade and high schools in that community and worked on the family's farms during the summer months. He entered the University of Illinois in 1915. His engineering and commercial studies were interrupted in May, 1917, when he enlisted in the army. After his discharge from the service March 3, 1919, he went with the Bedford Stone and Construction Co., Indianapolis, as assistant secretary and treasurer, and remained until 1921.

Following a short term of service in the Springfield division of the Bureau of Internal Revenue, Schuck went with Corporation Service Co., financial counselors.

Schuck has a 183-acre fruit farm northeast of LaPorte, Ind. Mr. and Mrs. Schuck have two children, Arthur F. Jr., 15, and daughter, Dorothy Ann, 13.

At Santa Fe dinner, left to right, are: C. A. Hartquist, manager, Henderson County Livestock Marketing Association; W. E. Goodloe, general livestock agent, Kansas City; Howard G. Nicholson, general freight agent, Chicago; Otto Steffey, IAA board member and Henderson Association president; R. J. Yost, division superintendent, and S. F. Russell, IAA director of livestock marketing.
